

The Chemistry of Soils

Second Edition

Garrison Sposito

Contents

1	The Chemical Composition of Soils	3
1.1	Elemental Composition	3
1.2	Metal Elements in Soils	8
1.3	Solid Phases in Soils	11
1.4	Soil Air and Soil Water	16
1.5	Soil Mineral Transformations	17
	For Further Reading	20
	Problems	21
	Special Topic 1: Balancing Chemical Reactions	25
2	Soil Minerals	28
2.1	Ionic Solids	28
2.2	Primary Silicates	36
2.3	Clay Minerals	41
2.4	Metal Oxides, Oxyhydroxides, and Hydroxides	49
2.5	Carbonates and Sulfates	54
	For Further Reading	56
	Problems	57
	Special Topic 2: The Discovery of the Structures of Clay Minerals	59

3	Soil Humus	65
3.1	Biomolecules	65
3.2	Humic Substances	70
3.3	Cation Exchange Reactions	72
3.4	Reactions with Organic Molecules	77
3.5	Reactions with Soil Minerals	82
	For Further Reading	85
	Problems	86
	Special Topic 3: Film Diffusion Kinetics in Cation Exchange	91
4	The Soil Solution	94
4.1	Sampling the Soil Solution	94
4.2	Soluble Complexes	96
4.3	Chemical Speciation	101
4.4	Predicting Chemical Speciation	104
4.5	Thermodynamic Stability Constants	110
	For Further Reading	113
	Problems	114
5	Mineral Stability and Weathering	119
5.1	Dissolution Reactions	119
5.2	Predicting Solubility Control: Activity–Ratio Diagrams	125
5.3	Coprecipitated Soil Minerals	130
5.4	Predicting Solubility Control: Predominance Diagrams	133
5.5	Phosphate Transformations in Calcareous Soils	135
	For Further Reading	139
	Problems	140
6	Oxidation–Reduction Reactions	144
6.1	Flooded Soils	144
6.2	Redox Reactions	148
6.3	The Redox Ladder	154
6.4	Exploring the Redox Ladder	159
6.5	pE–pH Diagrams	162
	For Further Reading	165
	Problems	166
	Special Topic 4: Balancing Redox Reactions	169
	Special Topic 5: The Invention of the pH Meter	171
7	Soil Particle Surface Charge	174
7.1	Surface Complexes	174
7.2	Adsorption	179
7.3	Surface Charge	181

7.4	Points of Zero Charge	183
7.5	Schindler Diagrams	188
	For Further Reading	190
	Problems	191
8	Soil Adsorption Phenomena	195
8.1	Measuring Adsorption	195
8.2	Adsorption Kinetics and Equilibria	197
8.3	Metal Cation Adsorption	203
8.4	Anion Adsorption	206
8.5	Surface Redox Processes	209
	For Further Reading	214
	Problems	214
9	Exchangeable Ions	219
9.1	Soil Exchange Capacities	219
9.2	Exchange Isotherms	223
9.3	Ion Exchange Reactions	226
9.4	Biotic Ligand Model	230
9.5	Cation Exchange on Humus	233
	For Further Reading	238
	Problems	239
10	Colloidal Phenomena	244
10.1	Colloidal Suspensions	244
10.2	Soil Colloids	248
10.3	Interparticle Forces	250
10.4	The Stability Ratio	255
10.5	Fractal Floccules	261
	For Further Reading	266
	Problems	267
	Special Topic 6: Mass Fractals	271
11	Soil Acidity	275
11.1	Proton Cycling	275
11.2	Acid-Neutralizing Capacity	279
11.3	Aluminum Geochemistry	282
11.4	Redox Effects	286
11.5	Neutralizing Soil Acidity	288
	For Further Reading	290
	Problems	291
	Special Topic 7: Measuring pH	293
12	Soil Salinity	296
12.1	Saline Soil Solutions	296
12.2	Cation Exchange and Colloidal Phenomena	298

12.3	Mineral Weathering	302
12.4	Boron Chemistry	305
12.5	Irrigation Water Quality	308
	For Further Reading	311
	Problems	312
	Appendix: Units and Physical Constants in Soil Chemistry	316
	For Further Reading	319
	Problems	319
	<i>Index</i>	321
