

SAFE DESIGN AND OPERATION OF PROCESS VENTS AND EMISSION CONTROL SYSTEMS

CONTENTS

Preface	XIV
Acknowledgment	XV

1

Introduction

1.1	Objective	2
1.2	Relationship to Other CCPS Publications	3
1.3	Industries and Operations Covered	4
1.4	Intended Audience	5
1.5	How to Use this Book	6
1.6	References	7

2

Management Overview

2.1.	Impact on Vent Header Systems	9
------	-------------------------------	---

3

Normal Process and Emergency Systems

3.1	Types of Vent Header Systems	13
3.1.1	Normal Process Vent Header Systems	14
3.1.2	Emergency Vent Header Systems	15
3.1.3	Combined Vent Header Systems	16
3.1.4	Considerations	16
3.2	Design Philosophy	19
3.2.1	Design Sequence	19
3.2.2	Hazards Associated with Combining Vent Streams	21
3.2.3	Inherent Safety	21
3.2.4	Flammability and Combustibility	23

3.2.5	Toxicity	25
3.2.6	Reactivity	27
3.2.7	Regulatory Issues	29
3.3	Reference	32

4

Combustion and Flammability

4.1	Flammable Limits	36
4.1.1	Mixture Stoichiometry	36
4.1.2	Factors Influencing Flammable Limits	38
4.1.3	Flammable Limit Variability	39
4.1.4	Effects of Temperature on Flammable Limits	39
4.1.5	Effects of Pressure on Flammable Limits	40
4.1.6	Flammable Limits of Combined Gas Streams	42
4.1.7	Cool Flame	42
4.1.8	Hybrid Mixtures	43
4.2	Limiting Oxidant Concentration	44
4.3	Deflagrations	45
4.4	Pressure Piling	46
4.5	Detonation Phenomena	47
4.5.1	Deflagration to Detonation Transition (DDT) and Run-Up Distance	48
4.5.2	Overdriven and Stable Detonations	50
4.5.3	Detonation Cell Size	51
4.6	References	56

5

UNDERSTANDING REQUIREMENTS

5.1	Understanding the Sources	60
5.1.1	Identify Vent Sources	60
5.1.2	Identify Normal Process Vent Streams	60
5.1.3	Normal Process Vent System, Design Case Scenario	60
5.1.4	Define Interface Requirements	60
5.1.5	Identify Hazard Scenarios That Could Result in Emergency Venting	60
5.1.6	Vent Gas Characteristics for Emergency Venting	61
5.1.7	Emergency Venting Design Case Scenario	61
5.1.8	Liquid Entrainment or Condensation in Normal Process Vent Headers	62
5.1.9	Two-Phase Venting	63

5.1.10	Flammable Gases and Vapors	64
5.1.11	Toxic and Noxious Materials	66
5.1.12	Reactive Systems	68
5.2	Regulatory Issues	74
5.2.1	Historical Background	74
5.2.2	Brief Review of Laws and Regulations	76
5.2.3	Improved Air Quality	78
5.3	At-Source Treatment Options	79
5.4	Combining Vent Streams	80
5.5	End-of-Line Treatment Systems	82
5.6	Specify Design Requirements	82
5.7	References	82

6

DESIGN APPROACH

6.1	Design Basis	85
6.2	Merging Vent Streams	86
6.2.1	Features Favorable for Merging Steams	87
6.2.2	Features that do not Favor Merging Streams	87
6.3	Vent Header Systems Handling Flammable Materials	88
6.3.1	Explosion Prevention	89
6.3.2	Operating Fuel Lean	90
6.3.3	Operating Inerted	97
6.3.4	Operating Fuel Rich	104
6.3.5	Oxidizers Other Than Oxygen	107
6.3.6	Explosion Protection	108
6.3.7	Ignition Sources	117
6.4	Vent Header Systems Handling Toxic Gases	118
6.4.1	Operating Principles for Header Systems Handling Toxic Gases	119
6.4.2	Piping Design	120
6.4.3	Combined Relief Valve and Rupture Disk Devices	121
6.5	Reactive Systems	121
6.5.1	Reactive Systems Design Considerations	121
6.6	Mechanical Design Considerations	123
6.6.1	Vent Header Pipe Specifications	123
6.6.2	Vent Header Supports	123
6.6.3	Stresses on Vent Header Piping	124
6.6.4	Shock Waves Downstream of Rupture Disks	125
6.6.5	Corrosion	125
6.6.6	Header Operating Pressure and Pressure Drop	125

6.6.7	Thermal Stresses and Low Temperature Embrittlement	126
6.6.8	Liquid Knock-Out and Drainage	126
6.6.9	Expansion Joints and Flexible Connections	128
6.6.10	Valves in the Vent Header System	129
6.7	References	130

7

Treatment and Disposal Systems

7.1	Selection of Treatment and Disposal Methods	133
7.2	Collection	137
7.2.1	Containment	137
7.2.2	Collection with Venting	139
7.2.3	Dump and Catch Tanks	139
7.2.4	Blowdown Drums and Tanks	141
7.2.5	Quench Drums	142
7.2.6	Quench Pools	145
7.2.7	Advantages and Disadvantages – Collection Systems	147
7.3	Physical Separation	147
7.3.1	Vapor-Liquid Gravity Separators	147
7.3.2	Knock-Out Tanks and Drums	149
7.3.3	Mist Eliminators	151
7.3.4	Cyclones	151
7.3.5	Advantages and Disadvantages – Physical Separators	152
7.4	Absorption	153
7.4.1	Spray Towers	154
7.4.2	Tray Towers	154
7.4.3	Packed-Bed Scrubber	154
7.4.4	Venturi Scrubbers	155
7.4.5	Advantages and Disadvantages – Absorption Systems	155
7.5	Adsorption	156
7.5.1	Advantages and Disadvantages – Carbon Adsorption	158
7.6	Recovery	158
7.6.1	Condensing Systems	159
7.6.2	Gas Recovery Systems	160
7.6.3	Advantages and Disadvantages – Recovery Systems	165
7.7	Thermal Destruction	165
7.7.1	Flares	165
7.7.2	Thermal and Catalytic Oxidizers	172
7.7.3	Process Heaters Used for Thermal Destruction	174
7.7.4	Advantages and Disadvantages – Thermal Destruction Systems	175

7.8	Dispersion of Vent Gas	176
7.8.1	Design and Safety Considerations	176
7.8.2	Atmospheric Dispersion Design	177
7.8.3	Advantages and Disadvantages – Dispersion to Atmosphere	178
7.9	References	179

8

HAZARD ANALYSIS AND CONSEQUENCE ASSESSMENT

8.1	Hazard Analysis Methods	184
8.2	Hazard Analysis Process	185
8.2.1	Identification of Causes	186
8.2.2	Development of Consequences	188
8.2.3	Estimation of Hazard Scenario Risk	189
8.3	Consequence Assessment Techniques	189
8.4	References	192

9

Operations and Maintenance

9.1	Daily Inspections	196
9.2	Scheduled Inspections and Maintenance	196
9.2.1	Materials Build-Up	196
9.2.2	Pressure Relief Valves and Rupture Disks	199
9.2.3	Conservation Vents	200
9.2.4	Explosion Prevention Systems	200
9.2.5	Fast Acting Valves and Chemical Isolation Systems	200
9.2.6	Explosion Relief Panels	201
9.2.7	Inerting Systems	201
9.2.8	Instrument and Controls	201
9.2.9	Low Point Drains	201
9.2.10	Corrosion and Erosion	201
9.2.11	Structural Supports for Vent Headers	202
9.2.12	Insulation and Heat Tracing	202
9.3	Management of Change	202
9.4	References	202

A

Acronyms and Abbreviations	203
-----------------------------------	-----

B

Glossary	207
-----------------	-----

C

Selected US Environmental Air Pollution Control Regulations	215
--	-----

D

Vent Header Design Checklist	225
-------------------------------------	-----

E

Normal Vent Header Source Control and Configuration Examples	233
---	-----

F

PHA HAZOP Deviation Table	243
----------------------------------	-----

G

Worked Examples

G1. Inerted Flammable Liquid Storage	247
G2. Flammable Liquid Process Operating Fuel Lean	254
G3. Flammable Liquid Process Operating Fuel Rich	259
G4. Flammable Liquid Process Operating Fuel Rich	263
G5. Refinery Example: Crude and Vacuum Units	267
G6. Refinery Example: Coker Unit and Gas Processing Plant	271
G7. Reactive System	275

H

Past Incidents

H1. Combustion Incidents	283
H2. Reactive Chemical Incidents	290
H3. Vacuum Failures	294
H4. References	295

I

Historical Perspective on Air Pollution Control

I1. Historical Background on Air Pollution	297
I2. Brief Review of Laws and Regulations	299
I3. Improved Air Quality	301
I4. References	307
