

EDITED BY IAN COLBECK

# ENVIRONMENTAL CHEMISTRY OF AEROSOLS

Blackwell  
Publishing

# Contents

<i>List of Contributors</i>	ix
<i>Preface</i>	xii
<b>1 Physical and Chemical Properties of Atmospheric Aerosols</b>	1
<i>Jay Turner and Ian Colbeck</i>	
1.1 Introduction	1
1.2 Ambient aerosol size distributions	3
1.2.1 Idealised size distributions of aerosol number and mass	3
1.2.2 Size distribution measurements	6
1.2.3 Dynamics of atmospheric aerosol size distributions	8
1.2.4 Features of selected ambient aerosol size distributions	11
1.3 Major chemical components of ambient fine particulate matter	15
1.4 Aerosol composition as a function of size	21
1.5 Summary and conclusions	22
References	25
<b>2 Nucleation</b>	31
<i>Ari Laaksonen and Kari P.J. Lehtinen</i>	
2.1 Introduction	31
2.2 Nucleation kinetics	31
2.2.1 One-component systems	31
2.2.2 Binary systems	34
2.3 Nucleation thermodynamics	36
2.3.1 One-component systems	36
2.3.2 The classical theory	39
2.3.3 Multicomponent systems	40
2.4 The nucleation theorem	41
2.4.1 Scaling properties of critical clusters	42
2.4.2 An application to atmospheric nucleation	45
References	46

<b>3 Mass Transfer to Aerosols</b>	<b>49</b>
<i>Charles L. Clement</i>	
<b>3.1 Introduction</b>	<b>49</b>
3.1.1 Equilibration between aerosol and gas	51
<b>3.2 Transfer to a particle</b>	<b>52</b>
3.2.1 Molecular motion	52
3.2.2 Motion in gases: kinetic theory	53
3.2.3 Diffusion	55
3.2.4 Diffusion to an aerosol particle	56
3.2.5 Combined diffusive and kinetic model	56
3.2.6 Fuchs mass transfer model	57
3.2.7 Heat and mass transfer	58
3.2.8 Multicomponent droplets and binary growth	64
3.2.9 Chemical model framework	65
3.2.10 Kinetic coefficients	67
<b>3.3 Transfer to an aerosol</b>	<b>68</b>
3.3.1 Aerosol description	68
3.3.2 Mean field approximation	70
3.3.3 Growth equations	73
3.3.4 Empirical atmospheric timescales	75
3.3.5 Redistributive processes	77
3.3.6 Nucleation mode mass transfer	79
3.3.7 Source terms	81
Appendix: water data	83
Nomenclature	83
<b>References</b>	<b>85</b>
<b>4 Organic Aerosols</b>	<b>91</b>
<i>Miltasis Lazaridis</i>	
<b>4.1 Introduction</b>	<b>91</b>
<b>4.2 Carbon-containing aerosols and their sources</b>	<b>93</b>
4.2.1 Elemental carbon – primary organic carbon	93
4.2.2 Secondary organic matter formation (secondary organic carbon)	95
4.2.3 Biological aerosols	96
4.2.4 Biogenic aerosols	98
4.2.5 Modelling biogenic aerosol formation	99
4.2.6 Polycyclic aromatic hydrocarbons	100
4.2.7 Emission inventories of primary organic aerosols and gaseous precursors	102
<b>4.3 Atmospheric chemistry of organic aerosols – field studies</b>	<b>102</b>
4.3.1 Measurements of carbonaceous aerosols	102
4.3.2 Organic compounds – source apportionment	104
<b>4.4 Carbonaceous aerosols at urban/rural environments</b>	<b>105</b>
<b>4.5 Summary</b>	<b>109</b>
<b>References</b>	<b>110</b>

<b>5 Metals in Aerosols</b>	<b>117</b>
<i>Irena Grgić</i>	
5.1 Introduction	117
5.2 Physico-chemical characteristics of metals in aerosols	118
5.2.1 Size distribution	118
5.2.2 Chemical speciation	122
5.3 Reactivity of transition metals	128
5.3.1 Photochemical/chemical cycling	128
5.3.2 Interactions of transition metals with S(IV) species	129
References	133
<b>6 Thermodynamics of Aqueous Systems</b>	<b>141</b>
<i>David Topping</i>	
6.1 Introduction	141
6.2 Equilibrium	141
6.2.1 The chemical potential	143
6.2.2 Activity	145
6.3 Mixed solvent systems – a brief outline	147
6.4 Aqueous systems	148
6.4.1 Water content in the regime subsaturated with respect to water vapour	148
6.5 General aqueous thermodynamic equilibrium models for atmospheric aerosols	152
6.6 Inorganic systems	153
6.6.1 Activity coefficients	153
6.6.2 Bulk inorganic contributions to particulate water content in the regime subsaturated with respect to water vapour	155
6.7 Organic systems	157
6.7.1 Activity coefficients	157
6.7.2 Bulk organic contributions to particulate water content in the regime subsaturated with respect to water vapour	161
6.8 Mixed inorganic/organic systems	164
6.8.1 Activity coefficients – coupled thermodynamics	164
6.8.2 Activity coefficients uncoupled thermodynamics	166
6.8.3 Bulk mixed inorganic/organic contributions to particulate water content in the regime subsaturated with respect to water vapour	166
6.8.4 Deliquescence	169
6.9 Temperature-dependent equilibrium	171
6.9.1 Deliquescence	171
6.9.2 Gas-to-particle partitioning	173
6.9.3 Activity	174
6.10 The influence of curvature	175
6.10.1 The Kelvin effect	175

6.10.2	The Köhler equation – describing the equilibrium between a curved particle and its humid environment: basic equilibrium considerations	177

<b>7</b>	<b>Stratospheric Chemistry: Aerosols and the Ozone Layer</b>	<b>193</b>
<i>Rob MacKenzie</i>		
7.1	Introduction	193
7.2	General properties of the stratospheric aerosol layer	195
7.3	General stratospheric chemistry	197
7.3.1	Catalysed ozone loss	197
7.3.2	Initiation, null cycles, and termination of stratospheric chain reactions	199
7.4	Heterogeneous stratospheric chemistry	200
7.5	Polar stratospheric clouds and the 'ozone hole'	201
7.6	Volcanic aerosol	203
7.7	Meteoritic aerosol	207
7.8	Interactions between stratospheric chemistry and climate	208
References		210
<b>8</b>	<b>Aerosol Chemistry in Remote Locations</b>	<b>217</b>
<i>Urs Baltensperger and Markus Furger</i>		
8.1	Introduction	217
8.1.1	Definition of 'remote locations'	217
8.1.2	Aerosol measurement and monitoring	219
8.1.3	Processes and mechanisms	220
8.2	Observations	224
8.2.1	Oceans and marine locations	225
8.2.2	Antarctica	228
8.2.3	Arctic	232
8.2.4	Tropical forests	235
8.2.5	Boreal forests	238
8.2.6	High elevation and free troposphere	239
8.3	Summary	242
