Metalworking: Bulk Forming

The Materials
Information Society

Contents

Introduction	1	Draft	54
Introduction to Bulk-Forming Processes		Flash	54
<i>S.L. Semiatin</i>	3	Preform Design	55
Historical Perspective	3	Location of Impressions	55
Classification of Metalworking Processes	3	Multiple-Part Dies	55
Types of Metalworking Equipment	4	Dies for Precision Forging	56
Recent Developments in Bulk Forming	4	Fabrication of Impression Dies	56
Conclusions and Future Outlook	7	Resinking	57
Design for Deformation Processing		Cast Dies	57
<i>Howard Kuhn</i>	11	Heat Treating	58
Product Design	11	Trimming and Punching Dies	60
Processing to Meet Product Design Requirements	11	Die Life	60
Deformation Processing to Meet Product Design		Safety	61
Specifications	12	Die Wear	
Benefits and Disadvantages of Deformation Processes	13	<i>Rajiv Sivpuri, Sailesh Babu, S.L. Semiatin</i>	62
Summary	19	Die Wear and Failure Mechanisms	62
Forging Equipment and Dies	21	Materials for Dies	64
Hammers and Presses for Forging		Die Wear in Hot Forging Dies	70
<i>Taylan Altan, Manas Sirgaokar</i>	23	Surface Treatments and Coatings	76
Hammers	23	Lubricants and their Applications in Forging	
High-Energy-Rate Forging (HERF) Machines	26	<i>Rajiv Sivpuri, Satish Kini</i>	84
Mechanical Presses	27	Candidate Lubricants	84
Hydraulic Presses	30	Applications	88
Screw Presses	33	Die Manufacturing and Finishing	93
Multiple-Ram Presses	34	High-Speed and Hard Machining	93
Safety	35	Nontraditional Machining of Dies and Molds	95
Selection of Forging Equipment		Other Methods	96
<i>Taylan Altan, Manas Shirgaokar</i>	36	Forging Processes	97
Process Requirements and Forging Machines	36	Open-Die Forging	99
Classification and Characterization of Forging		Size and Weight	99
Machines	37	Shapes	99
Hydraulic Presses	39	Hammers and Presses	99
Mechanical Presses	40	Dies	99
Screw Presses	43	Auxiliary Tools	99
Hammers	45	Handling Equipment	101
Dies and Die Materials for Hot Forging		Production and Practice	101
<i>Rajiv Sivpuri</i>	47	Ingot Structure and Its Elimination	102
Open Dies	47	Forgeability	102
Impression Dies	47	Deformation Modeling	102
Forging Machine Dies	49	Examples of Production Practice	104
Die Materials (Ref 1)	49	Contour Forging	107
Factors in the Selection of Die Materials	50	Roll Planishing	108
Die Inserts	52	Allowances and Tolerances	108
Parting Line	52	Safety	110
Locks and Counterlocks	53	Closed-Die Forging in Hammers and Presses	111
Mismatch	54	Capabilities of the Process	111
		Forging Materials	111

Friction and Lubrication in Forging	112	Auxiliary Tools	162
Classification of Closed-Die Forgings	112	Automated Swaging Machines	162
Shape Complexity in Forging	112	Tube Swaging without a Mandrel	163
Design of Blocker (Preform) Dies	113	Tube Swaging with a Mandrel	165
Flash Design	114	Effect of Reduction	166
Prediction of Forging Pressure	115	Effect of Feed Rate	166
Equipment for Closed-Die Forging	116	Effect of Die Taper Angle	166
Forging Temperatures for Steels	116	Effect of Surface Contaminants	167
Control of Die Temperature	117	Lubrication	167
Trimming	118	Dimensional Accuracy	167
Cooling Practice	118	Surface Finish	167
Typical Forging Sequence	118	Swaging versus Alternative Processes	167
Hot Upset Forging		Swaging Combined with Other Processes	168
<i>J. Richard Douglas</i>	119	Special Applications	169
Applicability	119	Hot Swaging	169
Upset Forging Machines	119	Material Response	169
Selection of Machine Size	120	Noise Suppression	170
Tools	121	Swaging Problems and Solutions	170
Preparation of Forging Stock	122	Radial Forging	
Metal-Saving Techniques	123	<i>H.W. Sizek</i>	172
Heating	123	Types of Radial Forging	172
Die Cooling and Lubrication	123	Advantages of Radial Forging Versus Open-Die Cogging/ Forging	172
Simple Upsetting	123	Disadvantages of Radial Forging versus Open-Die Cogging/ Forging	173
Upsetting and Piercing	124	Types of Radial Forging Machines	173
Offset Upsetting	126	Forging Schedule Development	175
Double-End Upsetting	126	Forging Dies	175
Upsetting with Sliding Dies	126	Product Shape Control	176
Upsetting Pipe and Tubing	126	Example Parts and Processes	177
Electric Upsetting	129	Rotary Forging	179
Other Upsetting Processes	130	Applications	179
Roll Forging		Advantages and Limitations	180
<i>Prabir K. Chaudhury, Roger Rees</i>	131	Machines	180
Capabilities	131	Dies	181
Machines	131	Examples	181
Roll Dies	132	Isothermal and Hot-Die Forging	
Auxiliary Tools	133	<i>R.E. Montero, L.G. Housefiled, R.S. Mace</i>	183
Production and Practice	133	Comparison	183
Modeling and Simulation	134	History	183
Production Examples	134	Process Advantages	183
Ring Rolling		Process Disadvantages	184
<i>Robert Bolin</i>	136	Detailed Process Description	184
Process Overview	136	Alloy Applications	185
Applications	136	Process Selection	186
Ring Sizes and Production Ranges	137	Process Design	186
Machines	137	Forging Design Guidelines	188
Product and Process Technology	143	Applications of Finite-Element Analysis Modeling to Design	188
Blank Preparation	148	Cost	190
Ancillary Operations	151	Production Forgings	190
Blanking Tools and Work Rolls	152	Future Industry Trends	191
Combined Forging and Rolling	153	Precision Hot Forging	
Rolled Ring Tolerances and Machining Allowances	155	<i>J. Richard Douglas</i>	193
Alternative Processes	155	Variables Affecting the Accuracy of Forgings	193
Rotary Swaging of Bars and Tubes		Tolerances for Precision Forging	195
<i>Brian Fluth, Donald Hack, Albert L. Hoffmann, Richard Kelly, Walter Perun</i>	156	Precision Flashless Forging	196
Applicability	156	Flashless Forging of Spur Gears	196
Metal Flow During Swaging	157	Forging and Welding of Axle Shafts	196
Machines	158	Forging of Bevel Gears/Spiral Bevel Gears	197
Swaging Dies	160		

Coining	198	Forging of Heat-Resistant Alloys	
Applicability	198	<i>Y. Bhambri, V.K. Sikka</i>	269
Hammers and Presses	198	Forging Process	269
Lubricants	199	Grain Refinement with IN-718 Forging—Controlling	
Die Materials	199	Structure with Precipitated Phases (Ref 3)	273
Special Die Materials	200	Forging Methods	273
Coinability of Metals	201	Forging Alloys	274
Production Practice	201	Deformation Mechanisms and Processing Maps	278
Processing Problems and Solutions	203	Equipment	279
Control of Dimensions, Finish, and Weight	204	Forging Practices	281
Powder Forging		Heat Treatment	282
<i>B. Lynn Ferguson</i>	205	Forging of Refractory Metals	
Material Considerations	206	<i>John A. Shields, Jr., Kurt D. Moser, R. William Buckman, Jr.,</i>	
Process Considerations	208	<i>Todd Leonhardt, C. Craig Wojcik</i>	284
Mechanical Properties	213	Niobium and Niobium Alloys	284
Quality Assurance for P/F Parts	219	Molybdenum and Molybdenum Alloys	284
Applications of Powder Forged Parts	220	Tantalum and Tantalum Alloys	285
Practical Aspects of Converting Ingot to Billet		Tungsten and Tungsten Alloys	285
<i>Bruce Antolovich, Angelo Germidis, Paul Keefe, Michael Hill,</i>		Thermomechanical Processing of Ferrous Alloys	
<i>Bruce Lindsley, Vasisht Venkatesh</i>	227	<i>Stephen Yue</i>	286
Cogging	227	Rolling Practices and TMP Factors	287
Presses	227	Grain Refinement of Steel by Hot Working	288
Dies	229	Restoration Processes	288
Transportation Equipment	229	Strain-Induced Transformation (Austenite Pancaking)	290
Thermal Control	230	Alloying in HSLA Steels	290
Conversion Processes	230	Evolution of Microstructure During Hot Rolling	291
Modeling of the Cogging Process	232	General Guidelines for Schedule Design	293
Conclusions	236	Basic Rolling Strategies	293
Forging of Steels and Heat-Resistant Alloys	239	Other Schedules and TMP Strategies	295
Forging of Carbon and Alloy Steels		The Future of TMP	296
<i>C.J. Van Tyne</i>	241	Forging of Nonferrous Metals	297
Types of Forgings	241	Forging of Aluminum Alloys	
Forging Practices	241	<i>G.W. Kuhlman</i>	299
Selection of Steel	243	Forgeability	299
Controlled Forging of Steel	245	Forging Methods	301
Forgeability and Mechanical Properties	246	Forging Equipment	303
Effects of Forging on Component Properties	248	Die Materials, Design, and Manufacture	304
Heat Treatment of Carbon and Alloy Steel		Processing of Aluminum Alloy Forgings	305
Forgings	250	Forging of Advanced Aluminum Materials	308
Design Features	251	Aluminum Alloy Precision Forgings	309
Machining of Forgings	254	Forging of Copper and Copper Alloys	313
Design of Hot Upset Forgings	258	Forging Products	313
Forging of Stainless Steels		Forging Processes	313
<i>George Mochnal</i>	261	Forging Alloys	314
Forging Methods	261	Forging Design	315
Ingot Breakdown	261	Forging Equipment	315
Forgeability	262	Forging Practices	316
Austenitic Stainless Steels	262	Forging of Magnesium Alloys	
Martensitic Stainless Steels	264	<i>Prabir K. Chaudhury, Sean R. Agnew</i>	318
Ferritic Stainless Steels	265	Workability	319
Precipitation-Hardening Stainless Steels	265	Forging Equipment	321
Forging Equipment	265	Forging Processes	321
Dies	266	Forging Practice	322
Heating for Forging	267	Forging of Nickel-Base Alloys	
Heating of Dies	268	<i>D.U. Furrer, S.L. Semiatin</i>	324
Die Lubrication	268	Heating for Forging	324
Trimming	268	Die Materials and Lubricants	326
Cleaning	268	Primary Working	326

Secondary Working	327	Equipment	407
Conclusions	329	Tooling	407
Forging of Titanium Alloys		Preparation of Slugs	409
<i>G.W. Kuhlman</i>	331	Lubricants for Steel	410
Titanium Alloys Classes	331	Selection of Procedure	410
Forgeability	332	Dimensional Accuracy	413
Forging Methods	335	Causes of Problems	413
Forging Equipment	339	Cold Extrusion of Aluminum Alloy Parts	413
Die Specifications	340	Cold Extrusion of Copper and Copper Alloy Parts	416
Titanium Alloy Forging Processing	342	Impact Extrusion of Magnesium Alloys	417
Selection of Forging Method	347	Cold Extrusion of Nickel Alloys	418
Titanium Alloy Precision Forgings	347		
Forging Advanced Titanium Materials	351	Other Bulk Forming Processes	419
Titanium Aluminides	351		
Cavitation and Failure During Hot Forging	353	Conventional Hot Extrusion	
Bulk Forming of Intermetallic Alloys		<i>Frank F. Kraft, Jay S. Gunasekera</i>	421
<i>S.L. Semiatin</i>	354	Nonlubricated Hot Extrusion	421
Iron-, Nickel-, Niobium-, and Molybdenum-Base		Lubricated Hot Extrusion	422
Intermetallic Alloys	354	Metal Flow in Hot Extrusion	423
Processing of Gamma Titanium-Aluminide Alloys	356	Extrusion Speeds and Temperatures	423
Processing-Cost Trade-offs for Gamma Titanium-Aluminide		Presses for Extrusion	425
Alloys	362	Tooling	427
Summary and Future Outlook	364	Materials for Extrusion	430
Forging of Discontinuously Reinforced Aluminum Composites		Characterization of Extruded Shapes	431
<i>A. Awadallah, J.J. Lewandowski</i>	366	Operating Parameters	431
General Information	367	Applications of Computer-Aided Design and Manufacture	
Specific Results on Various DRA Systems	367	(CAD/CAM)	434
Modeling of Forging Behavior	371	Hydrostatic Extrusion of Metals and Alloys	
Properties of Deformation-Processed DRA Alloys	371	<i>J.J. Lewandowski, A. Awadallah</i>	440
Thermomechanical Processes for Nonferrous Alloys		General Aspects of Stress-State Effects on	
<i>D.U. Furrer, S.L. Semiatin</i>	374	Processing	440
Goals of Advanced Thermomechanical Processing	374	Hydrostatic Extrusion Fundamentals	441
Nickel-Base Superalloys	374	Hydrostatic Extrusion of Structural Alloys	443
Thermomechanical Processing of Nickel-Base		Hydrostatic Extrusion of Composite Systems	444
Superalloys	375	Hydrostatic Extrusion of Brittle Materials	445
Alpha-Beta Titanium Alloys	376	Hydrostatic Extrusion of Intermetallics or Intermetallic	
Beta Titanium Alloys	378	Compounds	445
Computer Simulation of Advanced TMP Processes	378	Hot Hydrostatic Extrusion	446
Cold Heading and Cold Extrusion	381	Wire, Rod, and Tube Drawing	448
Cold Heading		Basic Mechanics of Drawing (Ref 4)	448
<i>Toby Padfield, Murali Bhupatiraju</i>	383	Preparation for Drawing (Ref 5)	449
Process Parameters in Cold Heading	383	Drawing of Rod and Wire (Ref 5)	450
Materials for Cold Heading	384	Drawing of Bar (Ref 5)	451
Workability and Defects	386	Drawing of Tube (Ref 5)	452
Cold-Heading Machines	387	Dies and Die Materials	453
Tools	389	Lubrication (Ref 7)	454
Tool Materials	389	The Manufacture of Commercial Superconductors	455
Preparation of Work Metal	391	Flat, Bar, and Shape Rolling	
Complex Workpieces	393	<i>G.D. Lahoti, M.P. Pauskar</i>	459
Economy in Cold Heading	394	Basic Rolling Processes	459
Reverse Forming	395	Strip Rolling Theory	460
Dimensional Accuracy	396	Mechanics of Plate Rolling	462
Surface Finish	396	Shape Rolling	463
Combined Heading and Extrusion	397	Rolling Mills (Ref 69)	469
Warm Heading	399	Rolls and Roll Materials	470
Cold Extrusion		Roll Manufacturing Methods	472
<i>Murali Bhupatiraju, Robert Greczanik</i>	405	Instruments and Controls	472
Extrusion Pressure	405	Automatic Gage Control (AGC)	473
Steel for Cold Extrusion	405	Materials for Rolling	473
		Heated-Roll Rolling	474
		Defects in Rolling	476

Roll Forming of Axially Symmetric Components	Structural Effects	533
<i>B.P. Bewlay, O.A. Kaibyshev, M.F.X. Gigliotti, C.U. Hardwick,</i>	Effect on Properties	534
<i>V.A. Valitov, D.U. Furrer</i>	Applications	535
Roll Forming Process		480
Roll Formed Aluminum Alloy Components		482
Roll Formed Titanium Alloy Components		484
Roll Formed Nickel-Alloy Components		487
Mechanical Property Data for Titanium and Nickel Alloys		487
Thread Rolling		489
Capabilities and Limitations		489
Evaluation of Metals for Thread Rolling		490
Preparation and Feeding of Work Blanks		491
Die Materials		491
Flat-Die Rolling		492
Radial-Infeed Rolling		493
Tangential Rolling		494
Through-Feed Rolling		495
Planetary Thread Rolling		496
Continuous Rolling		497
Internal Thread Rolling		497
Selection of Rolling Method		498
Factors Affecting Die Life		499
Effect of Thread Form on Processing		500
Surface Speed		500
Penetration Rate and Load Requirements		500
Warm Rolling		501
Threading of Thin-Wall Parts		502
Threading Work-Hardening Materials		502
Rolling Threads Close to Shoulders		503
Fluids for Thread Rolling		503
Thread Rolling versus Alternative Processes		504
Coextrusion		
<i>Raghavan Srinivasan, Craig S. Hartley</i>		505
Applications of Coextrusion		505
Billet Configurations for Coextrusion		506
Material Flow Modes During Coextrusion		506
Analytical Studies of Coextrusion		507
Deformation Energy Method		507
Experimental Studies		512
State-of-the-Art of Coextrusion		513
Flow Forming		
<i>George Ray, Deniz Yilmaz, Matthew Fonte, Richard P. Keele</i>		516
Process Description		516
Tooling		518
Forming Direction		519
Process Control		520
Extrusion of Aluminum Alloys		
<i>Wojciech Z. Misiolek, Richard M. Kelly</i>		522
Aluminum Extrusion alloys		522
Profile Types		523
Classes of Profiles		523
Process of Aluminum Extrusion		524
Equal Channel Angular Extrusion		
<i>Vladimir Segal</i>		528
Phenomenology of Severe Plastic Deformation		528
Mechanics of Equal-Channel Angular Extrusion		529
Multipass Equal-Channel Angular Extrusion		530
Characteristics of Processing		531
Tool Design		532
	Microstructure Evolution, Constitutive Behavior, and Workability	537
	Plastic Deformation Structures	539
	Plastic Deformation in Crystals	539
	Amount of Deformation	542
	Composition	544
	Deformation Modes	545
	Low Temperature and High Strain Rate	548
	Elevated Temperatures	549
	Recovery, Recrystallization, and Grain-Growth Structures	552
	The Deformed State	552
	Recovery	553
	Recrystallization	554
	Grain Growth	557
	Microstructure Evolution during Hot Working (Ref 15)	559
	Constitutive Equations	
	<i>Amit Ghosh</i>	563
	Strain Hardening	563
	Strain Rate Effects	563
	Isothermal Constitutive Model	565
	Dynamic Recovery	570
	Diffusional Flow Mechanisms	574
	Physical Model for Superplastic Flow	579
	Evaluation of Workability for Bulk Forming Processes	
	<i>George E. Dieter</i>	587
	Flow Curves	587
	Material Factors Affecting Workability	591
	Process Variables Determining Workability	594
	Workability Fracture Criteria	596
	Workability Tests	602
	Finite-Element Modeling in Workability Analysis	610
	Conclusions	612
	Modeling and Computer Aided Process Design for Bulk Forming	615
	Finite Element Method Applications in Bulk Forming	
	<i>Soo-Ik Oh, John Walters, Wei-Tsu Wu</i>	617
	Historical Overview	617
	Methodologies	618
	Primary Materials Processing Applications	619
	Hot Forging Applications	621
	Cold Forming Applications	624
	Fracture Prediction	627
	Die Stress Analysis	630
	Product Assembly	632
	Optimization of Forging Simulations	634
	Conclusion	637
	Design Optimization for Dies and Preforms	
	<i>Anil Chaudhary, Suhas Vaze</i>	640
	Composing the Objective Function	640
	Calculation of the Objective Function	641
	Search for Optimum	642
	Conclusions	644

Rapid Tooling for Forging Dies		Forging Design Involving Ribs and Bosses	741
<i>Kuldeep Agarwal, Rajiv Shivpuri</i>	645	Defining Ribs and Bosses	741
Direct Rapid Tooling	645	Types of Ribs and Bosses	741
Indirect Rapid Tooling	646	Functional Designs, Properties, and Production of Ribs and Bosses	741
Workpiece Materials Database		Metal Flow in the Forging of Ribs	745
<i>Stéphane Guillard</i>	651	Measurement of Ribs and Bosses	747
Stress-Strain Curves	651	Design Parameters for Ribs and Bosses	747
Thermomechanical Properties	655	Rib Design Data from Actual Forgings	749
Models for Predicting Microstructural Evolution		Designer's Checklist for Ribs	752
<i>J.H. Beynon, C.M. Sellars</i>	660	Examples	752
Microstructural Knowledge Base	661	Forging Design Involving Corners and Fillets	759
Black-Box Modeling	663	Service Functions and Forging Producibility	759
Gray-Box Modeling	663	Factors Affecting Size of Corners and Fillets	759
White-Box Modeling	666	The Role of Corners and Fillets in Metal Flow	760
Hybrid Models	667	Design Parameters Derived from Actual Forgings	764
Conclusions	669	Designer's Checklist for Corners and Fillets	768
Polycrystal Modeling, Plastic Forming, and Deformation Textures		Examples	769
<i>Carlos N. Tome, Armand J. Beaudoin</i>	671	Forging Design Involving Webs	775
Crystallographic Anisotropy and the Yield Surface	671	Unconfined and Confined Webs	775
