Contents

Preface v

Acknowledgements vii

1. Introduction to Toxicology: The Necessity of Measurement 1

Introduction 1

The Beginnings of Toxicological Measurement 3

Toxicology and Toxicity Defined 7

It is Natural So It Must be Safe—Everyday Toxicological
Conundrums 9

Natural Medicines and Poisons 11

General Objectives of Toxicological Study 14

Nature and Outcome of Toxic Reactions 16

Cellular Basis and Consequences of Toxic Change 18

Expression of Toxicity 22

Target Organ Expression of Toxicity 24

The Necessity for Toxicological Assessment 29

Ethics of Toxicological Assessment 30

The Three Rs: Reduce, Refine, and Replace 32

2. Normality: Definition and Maintenance 37

Introduction 37

What is Normality? 38

Normality as a Range 41

Experimental Normality 41

Protocol Design and Procedure as Sources of Abnormality 45

Control Groups as Normality 46

Establishing and Maintaining Normality in Experimental Groups 48

Baseline Data and Historical Controls 50

3. Determination of Toxicity: The Basic Principles 59

Circumstances of Toxicity Testing 59

Effects Sought in Toxicity Studies 61

Basic Principles of Toxicological Investigation 61

Toxicokinetic Design 76

Regulatory Framework and Influences 77

Regulation of Study Conduct—Good Laboratory Practice 80

- 4. Determination of Toxicity: *In Vitro* and Alternatives 89**
- Introduction 89
 - Rationale for *In Vitro* Toxicology 90
 - How and When to Use *In Vitro* or Alternative Techniques 92
 - Considerations in Screening Program Design 93
 - Areas of Use of *In Vitro* Toxicology 94
 - Considerations in the Development of *In Vitro* Tests 95
 - Validation of *In Vitro* Methods 96
 - Test Systems and Endpoints 98
 - Toxicity in Silico 101
 - Computer Prediction Systems 104
 - Target Organ Toxicity 104
 - Functional Toxicity Testing 107
 - Pharmacology and Safety Pharmacology *In Vitro* 107
 - Metabolism 108
 - Kinetics 108
 - Toxicity Testing 109
 - Carcinogenicity 109
 - Reproductive Toxicity 109
 - Irritation and Corrosion 110
 - Phototoxicity 110
 - Ecotoxicology 110
 - Pitfalls in *In Vitro* Toxicology 111
 - Future Utility 111
 - Overview 112
- 5. Safety Pharmacology 115**
- Introduction 115
 - General Principles 116
 - Tests to be Conducted 117
 - What to Test? 119
 - Design 119
 - Test Systems for Safety Pharmacology 121
 - Safety Pharmacology in Toxicity Studies 121
 - Tests and Their Conduct 122
 - Pitfalls of Safety Pharmacology Studies 128
 - Overview 129
- 6. Determination: General and Reproductive Toxicology 131**
- General Toxicology 131
 - Test Systems for General Toxicology 131
 - Study Designs in General Toxicology 134
 - Examinations for Specific Toxicities 142
 - Pitfalls in General Toxicology 145
 - Reproductive Toxicology 147
 - Study Designs for Reproductive Toxicology 153
 - Pitfalls in Reproductive Toxicology 158

7. Determination: Genotoxicity and Carcinogenicity 161

- Genotoxicity 161
- Carcinogenicity 176
- Pitfalls in Carcinogenicity Studies 187

8. Determination: Dermal Toxicity—Sensitization, Irritation, and Corrosion 199

- Introduction 199
- General Principles of Dermal Toxicology 200
- Factors in Dermal Toxicity 201
- Test Systems 203
- Study Design and Parameters Measured 204
- Sensitization 207
- Pitfalls in Irritation and Sensitization 209

9. Determination: Environmental Toxicology and Ecotoxicology 213

- Introduction 213
- Relevance of Environmental Assessment to Chemical Development 214
- General Principles of Environmental Toxicology and Ecotoxicology 215
- Pollution, Routes of Entry, and Environmental ADME 216
- Factors in Testing for Environmental Effect 219
- Test Systems and Study Types for Ecotoxicology 220
- Environmental Assessment of Agrochemicals 224
- Environmental Assessment of Pharmaceuticals 226
- Pitfalls in Environmental Toxicology 227

10. Interpretation: Basic Principles 229

- Introduction 229
- Steps in Interpretation 231
- Use of Background Data in Interpretation 233
- Statistics and Significance in Toxicology 234
- Assessing Exposure 240
- The Reality of Difference—The Interpretation of Small Differences 246
- The Reproducibility of Difference 248
- Overview of Interpretation 249

11. Interpretation: Different Data Types 251

- Individual Data Sets 251
- Safety Pharmacology 252
- General Toxicology 253
- Morphological Pathology 258
- Reproductive Toxicology 266
- Genotoxicity 267
- Carcinogenicity 271
- Environmental Toxicology and Ecotoxicology 273

Case Studies	282
The Fundamentals of Interpretation	287

12. Prediction of Hazard 291

Introduction	291
Principles of Prediction	294
Steps in the Prediction Process	296
Factors for Consideration in Prediction	300
Prediction from Minimal Databases	304
Computer Models for Toxicity Prediction	305
Prediction for Individuals	315
Prediction Summary	316

13. Background to Risk Due to Toxicity 319

Introduction	319
Overview of Risk Analysis	319
Levels of Risk and Factors That Affect Risk	323
Summary	335

14. Risk Assessment in Practice and Setting Exposure Limits 337

Introduction	337
Risk Assessment as a Process	338
Data Quality	338
Data Selection for Risk Assessment	339
Single Effect Versus General Risk Assessment	341
Tools and Models in Risk Assessment	342
Target Population, Dose, and Exposure	345
Process and Factors in Risk Assessment	349
Setting Safety Factors and Margins	356
Exposure Limits	358
Dose Level Selection for Starting Risk Assessment	360
Setting Exposure Limits	364
Summary	368

15. Risk Assessment and Management in the Workplace 371

Introduction	371
The Historical and Regulatory Background	372
Classification and Exposure Limits	373
Factors in Workplace Risk Assessment	374
Workplace Risk Assessment	374
Workplace Exposure Assessment	375
Risk Management in the Workplace	377
Overview	383

16. Risk Assessment: Carcinogenicity, The Environment, Evolution, and Overview of Risk Assessment 385

- Introduction 385
- Notes on Risk Assessment and Carcinogenicity 385
- Notes on Risk Assessment and The Environment 395
- International Management of Environmental Risks 399
- The Evolution of Risk Assessment 399
- Overview of Risk Assessment 401

17. Evaluation of Specific Classes of Chemical 407

- Regulatory Influences 409
- The Basic Toxicity Test Package 411
- Human Pharmaceuticals 411
- Veterinary Pharmaceuticals 415
- Medical Devices 416
- Agrochemicals/Plant Protection Products 419
- Biocides 421
- Cosmetics 424
- General and Industrial Chemicals—Reach 426
- Overview 431

18. The Future of Toxicity Testing and Risk Assessment 435

- Introduction 435
- Challenges for Toxicology 436
- Challenge for Risk Assessment and Management 437
- Influences on Toxicity Testing and Risk Assessment 437
- Utility of Animal Experiments in Risk Assessment 439
- Development of New Test Methods and Models 440
- In Vitro Toxicology and the Future 442
- Toxicology in Silico 443
- The Future of Safety Evaluation and Risk Assessment 443

Appendix: Useful Websites 445

Bibliography 447

Select Glossary 449

Index 455
