

Table of Contents

Foreword	VII
Contributor list	IX
About the editors	XIII
<i>Keynote lectures</i>	
Multicomponent diffusion in clays <i>C.A.J. Appelo</i>	3
Modelling of solute mass transfer across the capillary fringe <i>U. Maier, C. Beyer, B. Susset and P. Grathwohl</i>	15
Strategies to quantify contaminant degradation in groundwater using stable isotope data <i>D. Hunkeler</i>	31
<i>Alternative methods and indicators of water quality in natural porous media</i>	
Chapter 1. Derivation of natural background levels and threshold values for groundwater bodies in the Upper Rhine Valley <i>R. Kunkel, G. Berthold, A. Blum, P. Elsass, J.-G. Fritsche, R. Wolter and F. Wendland</i>	45
Chapter 2. Introducing time variability and sampling rate in the mapping of groundwater contamination by means of the Bayesian Maximum Entropy (BME) method <i>S. Mattern, P. Bogaert and M. Vanclooster</i>	53
Chapter 3. Biotechnology for risk assessment of contaminated sites. From reporter genes to DNA-microarrays <i>E. Puglisi and P. Boccazzi</i>	69
Chapter 4. Aggregated pesticide risk evaluation for groundwater in Belgium with the PRIBEL indicator <i>S. Vergucht and W. Steurbaut</i>	81
Chapter 5. Strategies and effectiveness of groundwater monitoring systems for different aims (report from COST629 Working Group 1) <i>H.-J. Voigt, C. Nitsche, J. Tamás, T. Bíró, H.P. Broers and R. Kozel</i>	95
<i>Biogeochemical processes from soil to groundwater</i>	
Chapter 6. Application of high-resolution groundwater sampling in a tar oil-contaminated sandy aquifer. Studies on small-scale abiotic gradients <i>B. Anneser, L. Richters and C. Griebler</i>	107

VI Contents

Chapter 7.	Stable isotopes as a tool for monitoring the volatilisation of non-aqueous phase liquids from the unsaturated zone <i>P. Höhener, D. Bouchard and D. Hunkeler</i>	123
Chapter 8.	The role of mineralogical and organic fraction on metal adsorption onto soil: Experimental approach and modelling <i>P. Liburdi, Y. Duale Kahie, V. Giuliano and M. Petrangeli Papini</i>	137
Chapter 9.	Time and space scale dependent macroscopic balance equations governing flow and transport in aquifers <i>S. Sorek and D. Ronen</i>	151
<i>Numerical simulation of pollutant transport and interaction in soil and subsoil techniques, problems and case study</i>		
Chapter 10.	Development and application of a 2D reactive transport model aimed at evaluating the effectiveness of reductive dechlorination stimulation by lactate injection at a chlorinated aliphatic hydrocarbons contaminated site <i>F. Aulenta, F. Bozzano, M. Leccese, M. Petitta, M. Petrangeli Papini and P. Viotti</i>	161
Chapter 11.	Quantification of biodegradation and volatilization rates of organic compounds in soils using the Dusty Gas Model <i>C.-S. Fen</i>	175
Chapter 12.	Prognosis of contaminant source remediation: Identification of problems at a contaminated BTX site <i>D. Schäfer</i>	183
Chapter 13.	Advances in the quantification of nutrient biogeochemistry in coastal groundwater systems: A review <i>C. Spiteri and P. Regnier</i>	195
Chapter 14.	A flexible reaction network simulation module for the MT3DMS model <i>M. Van Camp and K. Walraevens</i>	213
