

The cover features two brain scan images, likely PET or SPECT scans, showing functional activity in the brain. The scans are color-coded, with red and yellow indicating higher activity and blue and green indicating lower activity. A red line starts from a point on the left scan, curves upwards and to the right, then downwards and to the right, ending at a point on the right scan. The background is dark with a fine grid pattern.

THE PRACTICE OF
STATISTICS
IN THE
LIFE
SCIENCES

Contents

To the Instructor: About This Book	viii	CHAPTER 4 Regression	93
Media and Supplements	xvi	Regression lines	93
To the Student: Statistical Thinking	xix	The least-squares regression line	98
		Using technology	100
		Facts about least-squares regression	102
		Residuals	105
		Influential observations	109
		Cautions about correlation and regression	111
		Association does not imply causation	113
PART I			
Exploring Data	1		
CHAPTER 1 Picturing Distributions with Graphs	3	CHAPTER 5 Two-Way Tables*	129
Individuals and variables	3	Marginal distributions	130
Categorical variables: pie charts and bar graphs	6	Conditional distributions	132
Quantitative variables: histograms	11	Simpson's paradox	137
Interpreting histograms	14		
Quantitative variables: stemplots and dotplots	18	CHAPTER 6 Exploring Data: Part I Review	147
Time plots	21	Part I summary	148
		Review exercises	151
CHAPTER 2 Describing Distributions with Numbers	37	Supplementary exercises	155
Measuring center: the mean	38	EESEE case studies	159
Measuring center: the median	39		
Comparing the mean and the median	40	PART II	
Measuring spread: the quartiles	41	From Exploration to Inference	161
The five-number summary and boxplots	43		
Spotting suspected outliers*	45	CHAPTER 7 Samples and Observational Studies	163
Measuring spread: the standard deviation	46	Observation versus experiment	163
Choosing measures of center and spread	49	Sampling	166
Discussion: Dealing with outliers: recognition and treatment	51	Sampling designs	168
Using technology	53	Sample surveys	175
Organizing a statistical problem	53	Comparative observational studies	176
CHAPTER 3 Scatterplots and Correlation	65	CHAPTER 8 Designing Experiments	187
Explanatory and response variables	65	Designing experiments	187
Displaying relationships: scatterplots	67	Randomized comparative experiments	191
Interpreting scatterplots	69	Matched pairs and block designs	195
Adding categorical variables to scatterplots	72		
Measuring linear association: correlation	74		
Facts about correlation	77		

*Starred material is optional.

Cautions about experimentation	199	
Ethics in experimentation	202	
<i>Discussion: The Tuskegee syphilis study</i>	206	
CHAPTER 9 Introducing Probability		219
The idea of probability	220	
Probability models	223	
Probability rules	226	
Discrete probability models	228	
Continuous probability models	230	
Random variables	235	
Personal probability*	236	
Risk and odds*	238	
CHAPTER 10 General Rules of Probability*		249
Relationships among several events	249	
Conditional probability	253	
General probability rules	255	
Tree diagrams	260	
Bayes's theorem	264	
<i>Discussion: Making sense of conditional probabilities in diagnostic tests</i>	267	
CHAPTER 11 The Normal Distributions		277
Normal distributions	277	
The 68-95-99.7 rule	279	
The standard Normal distribution	282	
Finding Normal probabilities	284	
Using the standard Normal table*	286	
Finding a value given a probability or a proportion	288	
Normal quantile plots*	291	
CHAPTER 12 Discrete Probability Distributions*		305
The binomial setting and binomial distributions	305	
Binomial distributions in statistical sampling	307	
Binomial probabilities	308	
Using technology	310	
Binomial mean and standard deviation	312	
The Normal approximation to binomial distributions	314	
The Poisson distributions	317	
Using technology	319	
CHAPTER 13 Sampling Distributions		331
Parameters and statistics	331	
Statistical estimation and the law of large numbers	332	
Sampling distributions	334	
The sampling distribution of \bar{x}	337	
The central limit theorem	340	
The sampling distribution of \hat{p}	344	
CHAPTER 14 Introduction to Inference		353
The reasoning of statistical estimation	354	
Margin of error and confidence level	357	
Confidence intervals for the mean μ	359	
The reasoning of tests of significance	363	
Stating hypotheses	365	
P-value and statistical significance	367	
Tests for a population mean	371	
Tests from confidence intervals	375	
CHAPTER 15 Inference in Practice		383
Conditions for inference in practice	384	
How confidence intervals behave	387	
How significance tests behave	391	
<i>Discussion: The scientific approach</i>	395	
Planning studies: sample size for confidence intervals	397	
Planning studies: the power of a statistical test*	398	
CHAPTER 16 From Exploration to Inference: Part II Review		413
Part II summary	414	
Review exercises	419	
Supplementary exercises	423	
Optional exercises	426	
EESEE case studies	428	
PART III		
Inference about Variables		429
CHAPTER 17 Inference about a Population Mean		431
Conditions for inference	431	
The <i>t</i> distributions	432	
The one-sample <i>t</i> confidence interval	435	
The one-sample <i>t</i> test	437	
Using technology	439	
Matched pairs <i>t</i> procedures	442	
Robustness of <i>t</i> procedures	445	

CHAPTER 18 Two-Sample Problems	457	Expected counts in two-way tables	564
Two-sample problems	457	The chi-square test	566
Comparing two population means	459	Using technology	567
Two-sample t procedures	461	Conditions for the chi-square test	572
Using technology	468	Uses of the chi-square test	573
Robustness again	471	Using tables of critical values*	577
Details of the t approximation*	472	The chi-square test and the two-sample z test*	578
Avoid the pooled two-sample t procedures*	474		
Avoid inference about standard deviations*	475		
CHAPTER 19 Inference about a Population Proportion	485	CHAPTER 23 Inference for Regression	591
The sample proportion \hat{p}	486	Conditions for regression inference	593
Large-sample confidence intervals for a proportion	488	Estimating the parameters	594
Accurate confidence intervals for a proportion ("plus-four method")	491	Using technology	597
Choosing the sample size	493	Testing the hypothesis of no linear relationship	601
Significance tests for a proportion	496	Testing lack of correlation*	602
Using technology	500	Confidence intervals for the regression slope	605
		Inference about prediction	606
		Checking the conditions for inference	611
CHAPTER 20 Comparing Two Proportions	507	CHAPTER 24 One-Way Analysis of Variance: Comparing Several Means	629
Two-sample problems: proportions	507	Comparing several means	631
The sampling distribution of a difference between proportions	509	The analysis of variance F test	632
Large-sample confidence intervals for comparing proportions	510	Using technology	634
Accurate confidence intervals for comparing proportions ("plus-four method")	513	The idea of analysis of variance	639
Significance tests for comparing proportions	515	Conditions for ANOVA	641
Relative risk and odds ratio*	519	F distributions and degrees of freedom	646
<i>Discussion: Assessing and understanding health risks</i>	524	The one-way ANOVA and the pooled two-sample t test*	648
		Details of ANOVA calculations*	649
CHAPTER 21 The Chi-Square Test for Goodness of Fit	537	CHAPTER 25 Inference: Part III Review	665
Hypotheses for goodness of fit	537	Part III summary	667
The chi-square test for goodness of fit	540	Review exercises	670
Using technology	542	Supplementary exercises	676
Interpreting chi-square results	544	EESEE case studies	681
Conditions for the chi-square test	547		
The chi-square distributions*	549	Statistical Thinking Revisited	683
The chi-square test and the one-sample z test*	551	Notes and Data Sources	687
		Tables	715
CHAPTER 22 The Chi-Square Test for Two-Way Tables	559	TABLE A Random digits	716
Two-way tables	560	TABLE B Standard Normal probabilities	717
The problem of multiple comparisons	562	TABLE C t distribution critical values	719
		TABLE D Chi-square distribution critical values	720
		TABLE E Critical values of the correlation r	721
		TABLE F F distribution critical values	722

Answers to Selected Exercises	727
Data Table Index	753
Index	755

PART IV

Optional Companion Chapters (available on the PLSLCD and Web site: www.whfreeman.com/psls)

CHAPTER 26 Beyond One-Way ANOVA: Follow-up Tests and Two-Way ANOVA	26-1
Beyond one-way ANOVA	26-1

Follow-up analysis: Tukey pairwise multiple comparisons	26-5
Follow-up analysis: contrasts*	26-9
Two-way ANOVA: conditions, main effects, and interaction	26-13
Inference for two-way ANOVA	26-21
Some details of two-way ANOVA*	26-29

CHAPTER 27 Nonparametric Tests	27-1
Comparing two samples: the Wilcoxon rank sum test	27-3
Matched pairs: the Wilcoxon signed rank test	27-15
Comparing several samples: the Kruskal-Wallis test	27-23
