Foreword xi

Chapter 1 Introduction 1

1.1 Definition and Objectives 1
1.2 Historical Background 5
1.3 International Space Law 10
1.4 Advantages of Space-Based Observations 12
1.4.1 Global Coverage 13
1.4.2 A Synoptic View 15
1.4.3 Multiscale Observations 15
1.4.4 Observations over the Nonvisible Regions of the Spectrum 16
1.4.5 Repeat Observation 16
1.4.6 Immediate Transmission 17
1.4.7 Digital Format 17
1.5 Sources of Information on Remote Sensing 18
1.6 Review Questions 20

Chapter 2 Physical Principles of Remote Sensing 21

2.1 Fundamentals of Remote Sensing Signals 21
2.2 The Electromagnetic Spectrum 24
2.3 Terms and Units of Measurement 25
2.4 Electromagnetic Radiation Laws 28
2.5 Spectral Signatures in the Solar Spectrum 33
2.5.1 Introduction 33
2.5.2 Vegetation Reflectance 38
2.5.3 Soil Reflectance Properties 42
2.5.4 Water in the Solar Spectrum 45
2.6 The Thermal Infrared Domain 47
2.6.1 Characteristics of EM Radiation in Thermal Infrared 47
2.6.2 Thermal Properties of Vegetation 49
2.6.3 Soils in Thermal Domain 50
2.6.4 Thermal Signature of Water and Snow 51
2.7 The Microwave Region 51
2.7.1 Characteristics of Electromagnetic Radiation in the Microwave Region 51
2.7.2 Characteristics of Vegetation in the Microwave Region 55

2.7.3 Characteristics of Soil and Water in the Microwave Region 56
2.8 Atmospheric interactions 57
2.8.1 Atmospheric Absorption 58
2.8.2 Atmospheric Scattering 59
2.8.3 Atmospheric Emission 59
2.9 Review Questions 60

Chapter 3 Sensors and Remote Sensing Satellites 63

3.1 Types of Sensors 63
3.2 Resolution of a Sensor System 63
3.2.1 Spatial Resolution 64
3.2.2 Spectral Resolution 65
3.2.3 Radiometric Resolution 67
3.2.4 Temporal Resolution 68
3.2.5 Angular Resolution 69
3.2.6 Relationship among Different Types of Resolution 70
3.3 Passive Sensors 70
3.3.1 Photographic Cameras 71
3.3.2 Cross-Track Scanners 74
3.3.3 Along-Track (Push-Broom) Scanners 76
3.3.4 Video Cameras 77
3.3.5 Microwave Radiometers 78
3.4 Active Sensors 78
3.4.1 Radar 78
3.4.2 LIDAR 85
3.5 Satellite Remote Sensing Missions 87
3.5.1 Satellite Orbits 87
3.5.2 The Landsat Program 89
3.5.3 SPOT Satellite 91
3.5.4 The IRS Program 93
3.5.5 High-Spatial-Resolution Commercial Satellites 95
3.5.6 TIROS-NOAA 96
3.5.7 Other Polar Orbiting Meteorological Satellites 98
3.5.8 Terra–Aqua 99
3.5.9 Geostationary Meteorological Satellites 104
3.6 Review Questions 112

Chapter 4 Basis for Interpretation of Remote Sensing Images 115

4.1 Constraints in Using Remote Sensing Data 115
4.1.1 What Can Be Estimated from the Images? 115
4.1.2 Costs of Data Acquisition 117
4.1.3 End-User Requirements 117

4.2 Types of Interpretation 118
4.2.1 Thematic Classification 119
4.2.2 Generation of Biophysical Variables 119
4.2.3 Change Detection 119
4.2.4 Spatial Patterns 120
4.3 Organization of Remote Sensing Project 120
4.3.1 Description of Objectives 120
4.3.2 Scale and Resolution 121
4.3.3 Classification Typology 123
4.3.4 Selection of Imagery 126
4.3.5 Image Formats and Media 127
4.3.6 Selection of Interpretation Method: Visual or Digital Processing? 128
4.4 Interpretation Phase 130
4.5 Presentation of Study Cases 133
4.6 Review Questions 134

Chapter 5 Visual Interpretation 135

5.1 Characteristics of Photographic Images 135
5.2 Feature Identification 135
5.3 Criteria for Visual Interpretation 136
5.3.1 Brightness 138
5.3.2 Color 139
5.3.3 Texture 142
5.3.4 Spatial Context 144
5.3.5 Shadows 145
5.3.6 Spatial Pattern 146
5.3.7 Shape and Size 147
5.3.8 Stereoscopic View 148
5.3.9 Period of Acquisition 148
5.4 Elements of Visual Analysis 150
5.4.1 Geometric Characteristics of a Satellite Image 150
5.4.2 Effect of Spatial Resolution in Visual Analysis 150
5.4.3 Effect of Spectral Resolution in Visual Analysis 151
5.4.4 Color Composites 153
5.4.5 Multitemporal Approaches 154
5.5 Review Questions 157

Chapter 6 Digital Image Processing (I): Enhancements and Corrections 159

6.1 Structure of a Digital Image 159
6.2 Media and Data Organization 162
6.2.1 Data Storage 162
6.2.2 Recording Formats 162

6.3 Digital Image Processing Equipment 164
6.4 General File Operations 166
6.4.1 File Management 167
6.4.2 Display Utilities 170
6.4.3 Image Statistics and Histograms 171
6.5 Visual Enhancements 174
6.5.1 Contrast Enhancement 175
6.5.1.1 Color Look-Up Table 175
6.5.1.2 Contrast Compression 176
6.5.1.3 Contrast Stretch 178
6.5.2 Color Composites 182
6.5.3 Pseudo-Color 183
6.5.4 Filters 184
6.5.4.1 Digital Filters 184
6.5.4.2 Low-Pass Filter 187
6.5.4.3 High-Pass Filter 188
6.6 Image Corrections 191
6.6.1 Sources of Error in Satellite Imagery 191
6.6.2 Radiometric Corrections 194
6.6.2.1 Restoration of Missing Lines and Pixels 194
6.6.2.2 Correction of Striping Effects 195
6.6.2.3 Calculating Reflectance 197
6.6.2.4 Calculating Temperature 215
6.6.3 Geometric Corrections 218
6.6.3.1 Introduction 218
6.6.3.2 Correction from Orbital Models 219
6.6.3.3 Correction from Control Points 222
6.6.3.4 Calculating the Transformation Function 225
6.6.3.5 Transference of the Original DL to Its Corrected Position 228
6.6.3.6 Correction with Digital Elevation Models 233
6.7 Review Questions 234

Chapter 7 Digital Image Processing (II): Generation of Thematic Information 237

7.1 Continuous Variables 238
7.1.1 Inductive and Deductive Models in Remote Sensing 239
7.1.2 Principal Component Analysis 243
7.1.3 Spectral Vegetation Indices (VIs) 249
7.1.3.1 Ratio-Based VIs 251
7.1.3.2 Optimized VIs 256
7.1.3.3 Orthogonal-Based VIs 260

7.1.4 Extraction of Subpixel Information 265
7.2 Digital Image Classification 271
7.2.1 Introduction 271
7.2.2 Training Phase 273
7.2.2.1 Basic Concepts 273
7.2.2.2 Supervised Classification 275
7.2.2.3 Unsupervised Classification 278
7.2.2.4 Mixed Methods 281
7.2.2.5 Analysis of the Training Statistics 282
7.2.3 Assignment Phase 287
7.2.3.1 Minimum Distance Classifier 287
7.2.3.2 Parallelepiped Classifier 288
7.2.3.3 Maximum Likelihood Classifier 289
7.2.3.4 Decision Tree Classifier 294
7.2.3.5 Neural Networks 296
7.2.3.6 Fuzzy Classification 300
7.2.3.7 Hyperspectral Classification 302
7.2.3.8 Contextual Classifiers 305
7.2.4 Classification Outputs 308
7.2.4.1 Mapping Products 309
7.2.4.2 Statistical Products 310
7.3 Techniques of Multitemporal Analysis 310
7.3.1 Temporal Domain in Remote Sensing Studies 310
7.3.2 Prerequisites for Multitemporal Analysis 312
7.3.2.1 Multitemporal Matching 313
7.3.2.2 Radiometric Calibration 314
7.3.3 Methods for Seasonal Analysis 315
7.3.4 Change Detection Techniques 319
7.3.4.1 Multitemporal Color Composites 320
7.3.4.2 Image Differencing 321
7.3.4.3 Multitemporal Ratios 321
7.3.4.4 Principal Components 323
7.3.4.5 Regression Analysis 325
7.3.4.6 Change Vector Analysis 325
7.3.4.7 Defining Change Thresholds 326
7.3.4.8 Multitemporal Analysis of Classified Images 327
7.4 Analysis of Landscape Patterns 329
7.4.1 Remote Sensing and Landscape Ecology 329
7.4.2 Spatial Metrics for Interval-Scale Images 330
7.4.2.1 *Global Metrics for Continuous* Data 330
7.4.2.2 Local Metrics for Continuous Data 333
7.4.3 Spatial Metrics for Classified Images 335
7.4.3.1 Global Metrics for Classified Data 335

7.4.3.2 Local Metrics for Classified Data 336
7.4.4 Landscape Structural Dynamics 338
7.5 Review Questions 339

Chapter 8 Accuracy Assessment 343

8.1 Relevance of Validating Results 343
8.2 Methods to Estimate Accuracy 344
8.3 Sources of Error 345
8.3.1 Sensor Limitations 345
8.3.2 Method of Analysis 346
8.3.3 Landscape Complexity 346
8.3.4 Verification Process 349
8.4 Sampling Design 350
8.4.1 Error Distribution 350
8.4.2 Sampling Unit 350
8.4.3 Sampling Strategies 351
8.4.4 Sample Size 352
8.5 Gathering Information 354
8.6 Measuring Error in Interval-Scale Variables 356
8.7 Measuring Error in Classified Images 356
8.7.1 The Confusion Matrix 356
8.7.2 Global Accuracy 357
8.7.3 User Accuracy and Producer Accuracy 360
8.7.4 Kappa Statistic 361
8.7.5 Normalizing the Confusion Matrix 363
8.7.6 Validation of Binary Classes 365
8.8 Verification of Multitemporal Analysis 365
8.9 Review Questions 368

Chapter 9 Remote Sensing and Geographic Information Systems 371

9.1 The Need for GIS 371
9.2 Trends in GIS and Remote Sensing Development 371
9.3 Common Technical Requirements 373
9.4 GIS as Input for Remote Sensing Interpretation 374
9.5 Remote Sensing as Input for GIS 375
9.5.1 Availability of Geographic Information 375
9.5.2 Generation of Input Variables 376
9.5.3 Updating the Information 376
9.6 Integration of Satellite Images and GIS 377
9.7 Review Questions 381

Appendix 383
