

SERIES IN PLASMA PHYSICS

Applications of Laser-Plasma Interactions

Edited by
Shalom Eliezer • Kunioki Mima

 CRC Press
Taylor & Francis Group
A TAYLOR & FRANCISBOOK

1

Inertial Fusion Energy

Kunioki Mima, Masakatsu Murakami, Sadao Nakai, and Shalom Eliezer

CONTENTS

1.1	Introduction.....	2
1.2	Nuclear Fusion Reactions.....	2
1.3	Background for Implosion and Ignition Schemes.....	6
1.4	Compression and Gain Scaling.....	11
1.4.1	Fusion Reaction and Energy Gain.....	11
1.4.2	Why Compression?.....	12
1.4.3	Gain Scaling for FI.....	14
1.5	Central Hot-Spark Ignition by Laser Direct Drive.....	16
1.5.1	Recent Progress in Direct-Drive Implosion.....	16
1.5.2	Stabilized Implosion for Better Performance.....	18
1.6	FI Present Status and Future Prospects.....	20
1.6.1	Why Fast Ignition?.....	20
1.6.2	Ignition Condition in FI.....	21
1.6.3	Imploded Plasma Heating.....	25
1.6.4	Electron Heat Transport Research and Critical Issues of the FI.....	28
1.6.5	PW Laser and Future FI Facility.....	29
1.7	New Approach to ICF: Impact Ignition.....	31
1.7.1	Gain Curve for Impact Ignition.....	31
1.7.2	Implosion Dynamics of the Impactor.....	34
1.7.3	Suppression of RT Instability with Double Ablation.....	35
1.7.4	2D Integrated Hydrodynamics Simulation.....	37
1.7.5	Experimental Results on Superhigh Velocities and Neutron Yields.....	38
1.8	IFE Power Plant Development.....	41
1.8.1	IFE Power Plant Systems.....	41
1.8.2	Driver Development.....	43
1.8.3	Reaction Chamber.....	45
1.8.4	Fuel Pellet.....	47
	References.....	48
