Calculus of
Variations
with
Applications

Contents

PREFACE TO THE DOVER EDITION	vii
PREFACE TO THE ORIGINAL EDITION	vii
<i>Chapter 1, Introduction and Orientation</i>	
1.1 Prerequisites	1
1.2 Functions	1
1.3 The Extended Real Numbers	3
1.4 Bounds, Maxima, and Minima	4
1.5 Limits	5
1.6 Continuity and Semi-Continuity	8
1.7 Derivatives	9
1.8 Piecewise Continuous Functions	11
1.9 Continuous Piecewise Smooth Functions	12
1.10 Metric Spaces	13
1.11 Functions Defined Implicitly	15
1.12 Ordinary Differential Equations	16
1.13 The Riemann Integral	18
1.14 What Is the Calculus of Variations?	21
<i>Chapter 2, Necessary Conditions for an Extremum</i>	
2.1 Introduction	26
2.2 The Fixed-Endpoint Problem in the Plane	27
2.3 Minima of Ordinary Point-Functions	28
2.4 Different Kinds of Minima of $J(y)$	29
2.5 The Lemma of du Bois Reymond	31
2.6 The Euler Necessary Condition	32
2.7 Examples	36
2.8 The Weierstrass Necessary Condition	39
2.9 The Erdmann Corner Conditions	42
2.10 The Figurative	44
2.11 The Legendre Necessary Condition	45
2.12 The Jacobi Necessary Condition	46
2.13 Other Forms of the Jacobi Condition	48
2.14 Concluding Remarks	51
<i>Chapter 3, Sufficient Conditions for an Extremum</i>	
3.1 Introduction	53
3.2 Fields	55
3.3 The Hilbert Integral	57

3.4	The Fundamental Sufficiency Theorem	58
3.5	Examples	59
3.6	Sufficient Combinations of Conditions	62
3.7	Problems for Which Condition III' Fails	64
3.8	Sufficient Conditions When There Is a Corner	69
3.9	Extensions, Other Methods	71
3.10	Convex Sets and Convex Point-Functions	72
3.11	Convexity of Integrals and Global Minima	77
3.12	A Naive Expansion Method	80

Chapter 4, Variations and Hamilton's Principle

4.1	Introduction	85
4.2	The Operator δ	86
4.3	Formal Derivation of the Euler Equation	88
4.4	The Second Variation	90
4.5	Concluding Remarks on the δ -Calculus	92
4.6	Introduction to Hamilton's Principle	93
4.7	Examples	95
4.8	Side-Conditions and New Coordinates	97
4.9	The Generalized Hamilton Principle	101
4.10	Applications to Electric Networks	103
4.11	Concluding Remarks	104

Chapter 5, The Nonparametric Problem of Bolza

5.1	Introduction	106
5.2	Examples	107
5.3	Formulation of the Problem of Bolza	108
5.4	Alternative Forms of a Problem	110
5.5	Constrained Extrema of Point-Functions	111
5.6	Different Kinds of Extrema	113
5.7	The Multiplier Rule	115
5.8	Normality	120
5.9	Application of the Multiplier Rule to Examples	121
5.10	Further Necessary Conditions, Sufficient Conditions for Local Extrema	129
5.11	Sufficient Conditions for Global Extrema	129
5.12	Analysis of a Problem from Rocket Propulsion	134
5.13	Concluding Remarks	138

Chapter 6, Parametric Problems

6.1	Introduction	140
6.2	What Is a Curve?	141
6.3	Fréchet Distance between Mappings	142
6.4	Fréchet Distance between Curves	146
6.5	Piecewise Smooth Curves	147

6.6	Parametric Integrals and Problems	148
6.7	Homogeneity of Parametric Integrands	150
6.8	Consequences of the Homogeneity of F	152
6.9	The Classical Fixed-Endpoint Parametric Problem	155
6.10	The Classical Parametric Problem of Bolza	156
6.11	The Euler Necessary Condition	156
6.12	Necessary Conditions of Weierstrass and Legendre	159
6.13	Related Parametric and Nonparametric Problems of Like Dimensionality	163
6.14	An Addendum to the Euler Condition for a Nonparametric Integral	165
6.15	Related Parametric and Nonparametric Problems of Different Dimensionality	166
6.16	Concluding Remarks	167

Chapter 7, Direct Methods

7.1	Introduction	168
7.2	Global Extrema of Real-Valued Functions	169
7.3	Length of a Mapping	170
7.4	Lower Semi-Continuity of Length	171
7.5	Length of a Curve	173
7.6	The Representation in Terms of Length	173
7.7	The Hilbert Compactness Theorem	177
7.8	The Ascoli–Arzelà Theorem	181
7.9	The Helly Compactness Theorem	183
7.10	The Weierstrass Integral	187
7.11	Existence Theorems for Parametric Problems	192
7.12	Nonparametric Weierstrass Integrals	200

Chapter 8, Measure, Integrals, and Derivatives

8.1	Introduction	202
8.2	Linear Lebesgue Outer Measure	203
8.3	Lebesgue Measurability and Measure	204
8.4	Measurable Functions	210
8.5	The Lebesgue Integral	214
8.6	Convergence Theorems	220
8.7	Other Properties of Integrals	224
8.8	Functions of Bounded Variation	227
8.9	The Vitali Covering Theorem	231
8.10	Derivatives of Functions of Bounded Variation	234
8.11	Indefinite Integrals	237

Chapter 9, Variational Theory in Terms of Lebesgue Integrals

9.1	Introduction	245
-----	--------------	-----

9.2	Variational Integrals of the Lebesgue Type	246
9.3	The Lebesgue Length-Integral	251
9.4	Convergence in the Mean and in Length	255
9.5	Integrability of Parametric and Nonparametric Integrands; Weierstrass Integrals	256
9.6	Normed Linear Spaces	259
9.7	The L_p -Spaces	261
9.8	Separability of the Space $L_p([a, b])$	265
9.9	Linear Functionals and Weak Convergence	270
9.10	The Weak Compactness Theorem	274
9.11	Applications	280
9.12	Concluding Remarks	285
 <i>Chapter 10, A Miscellany of Nonclassical Problems</i>		
10.1	Introduction	286
10.2	Problems Motivated by Rocket Propulsion	287
10.3	A Least-Squares Estimation	294
10.4	Design of a Solenoid	296
10.5	Conflict Analysis, Games	301
10.6	Problems with Stochastic Ingredients	303
10.7	Problems with Lags	306
10.8	Concluding Remarks	310
 <i>Chapter 11, Hamilton–Jacobi Theory</i>		
11.1	Introduction	311
11.2	The Canonical Form of the Euler Condition	312
11.3	Transversals to a Field	314
11.4	The Formalism of Dynamic Programming	316
11.5	Examples	318
11.6	The Pontryagin Maximum Principle	321
11.7	Concluding Remarks	323
 <i>Chapter 12, Conclusion and Envoy</i>		
12.1	Comments and Suggestions	324
12.2	Generalized Curves	325
12.3	The Calculus of Variations in the Large	326
12.4	The Theory of Area	327
12.5	Multiple Integral Problems	328
12.6	Trends	329
	BIBLIOGRAPHY	331
	SUPPLEMENTARY BIBLIOGRAPHY	340
	INDEX	341
