

String Theory in a Nutshell

Elias Kiritsis

Contents

<i>Preface</i>	xv
<i>Abbreviations</i>	xvii
1 Introduction	1
1.1 Prehistory	1
1.2 The Case for String Theory	3
1.3 A Stringy Historical Perspective	6
1.4 Conventions	8
Bibliography	9
2 Classical String Theory	10
2.1 The Point Particle	10
2.2 Relativistic Strings	14
2.3 Oscillator Expansions	20
2.3.1 <i>Closed strings</i>	20
2.3.2 <i>Open strings</i>	22
2.3.3 <i>The Virasoro constraints</i>	24
Bibliography	26
Exercises	26
3 Quantization of Bosonic Strings	28
3.1 Covariant Canonical Quantization	28
3.2 Light-cone Quantization	31
3.3 Spectrum of the Bosonic String	32
3.4 Unoriented Strings	33
3.4.1 <i>Open strings and Chan-Paton factors</i>	34
3.5 Path Integral Quantization	37

3.6	Topologically Nontrivial World-sheets	39
3.7	BRST Primer	40
3.8	BRST in String Theory and the Physical Spectrum	42
	Bibliography	46
	Exercises	46
4	Conformal Field Theory	49
4.1	Conformal Transformations	49
4.1.1	<i>The case of two dimensions</i>	51
4.2	Conformally Invariant Field Theory	52
4.3	Radial Quantization	54
4.4	Mode Expansions	57
4.5	The Virasoro Algebra and the Central Charge	58
4.6	The Hilbert Space	59
4.7	The Free Boson	60
4.8	The Free Fermion	63
4.9	The Conformal Anomaly	64
4.10	Representations of the Conformal Algebra	66
4.11	Affine Current Algebras	69
4.12	Free Fermions and $O(N)$ Affine Symmetry	71
4.13	Superconformal Symmetry	77
4.13.1	$\mathcal{N} = (1,0)_2$ superconformal symmetry	77
4.13.2	$\mathcal{N} = (2,0)_2$ superconformal symmetry	79
4.13.3	$\mathcal{N} = (4,0)_2$ superconformal symmetry	81
4.14	Scalars with Background Charge	82
4.15	The CFT of Ghosts	84
4.16	CFT on the Disk	86
4.16.1	<i>Free massless bosons on the disk</i>	86
4.16.2	<i>Free massless fermions on the disk</i>	88
4.16.3	<i>The projective plane</i>	90
4.17	CFT on the Torus	90
4.18	Compact Scalars	93
4.18.1	<i>Modular invariance</i>	97
4.18.2	<i>Decompactification</i>	97
4.18.3	<i>The torus propagator</i>	97
4.18.4	<i>Marginal deformations</i>	98
4.18.5	<i>Multiple compact scalars</i>	98
4.18.6	<i>Enhanced symmetry and the string Brout-Englert-Higgs effect</i>	100
4.18.7	<i>T-duality</i>	101
4.19	Free Fermions on the Torus	103
4.20	Bosonization	105
4.20.1	<i>"Bosonization" of bosonic ghost system.</i>	106
4.21	Orbifolds	107

4.22 CFT on Other Surfaces of Euler Number Zero	112
4.23 CFT on Higher-genus Riemann Surfaces	116
Bibliography	117
Exercises	118

5 Scattering Amplitudes and Vertex Operators	126
5.1 Physical Vertex Operators	128
5.2 Calculation of Tree-level Tachyon Amplitudes	130
5.2.1 <i>The closed string</i>	130
5.2.2 <i>The open string</i>	131
5.3 The One-loop Vacuum Amplitudes	133
5.3.1 <i>The torus</i>	134
5.3.2 <i>The cylinder</i>	136
5.3.3 <i>The Klein bottle</i>	138
5.3.4 <i>The Möbius strip</i>	138
5.3.5 <i>Tadpole cancellation</i>	139
5.3.6 <i>UV structure and UV-IR correspondence</i>	140
Bibliography	141
Exercises	142

6 Strings in Background Fields	144
6.1 The Nonlinear σ -model Approach	144
6.2 The Quest for Conformal Invariance	147
6.3 Linear Dilaton and Strings in $D < 26$ Dimensions	149
6.4 T-duality in Nontrivial Backgrounds	151
Bibliography	151
Exercises	152

7 Superstrings and Supersymmetry	155
7.1 $\mathcal{N} = (1, 1)_2$ World-sheet Superconformal Symmetry	155
7.2 Closed (Type-II) Superstrings	157
7.2.1 <i>Massless R-R states</i>	159
7.3 Type-I Superstrings	162
7.4 Heterotic Superstrings	165
7.5 Superstring Vertex Operators	168
7.6 One-loop Superstring Vacuum Amplitudes	170
7.6.1 <i>The type-IIA/B superstring</i>	170
7.6.2 <i>The heterotic superstring</i>	171
7.6.3 <i>The type-I superstring</i>	171
7.7 Closed Superstrings and T-duality	174
7.7.1 <i>The type-II string theories</i>	174
7.7.2 <i>The heterotic string</i>	175
7.8 Supersymmetric Effective Actions	175

7.9 Anomalies	176
Bibliography	182
Exercises	183

8

D-branes	187
8.1 Antisymmetric Tensors and p -branes	187
8.2 Open Strings and T-duality	188
8.3 D-branes	191
8.4 D-branes and R-R Charges	193
8.4.1 <i>D-instantons</i>	196
8.5 D-brane Effective Actions	197
8.5.1 <i>The Dirac-Born-Infeld action</i>	197
8.5.2 <i>Anomaly-related terms</i>	199
8.6 Multiple Branes and Nonabelian Symmetry	200
8.7 T-duality and Orientifolds	201
8.8 D-branes as Supergravity Solitons	205
8.8.1 <i>The supergravity solutions</i>	205
8.8.2 <i>Horizons and singularities</i>	207
8.8.3 <i>The extremal branes and their near-horizon geometry</i>	208
8.9 NS ₅ -branes	211
Bibliography	213
Exercises	213

9

Compactifications and Supersymmetry Breaking	219
9.1 Narain Compactifications	219
9.2 World-sheet versus Space-time Supersymmetry	223
9.2.1 $\mathcal{N} = 1_4$ <i>space-time supersymmetry</i>	225
9.2.2 $\mathcal{N} = 2_4$ <i>space-time supersymmetry</i>	226
9.3 Orbifold Reduction of Supersymmetry	228
9.4 A Heterotic Orbifold with $\mathcal{N} = 2_4$ Supersymmetry	231
9.5 Spontaneous Supersymmetry Breaking	235
9.6 A Heterotic $\mathcal{N} = 1_4$ Orbifold and Chirality in Four Dimensions	237
9.7 Calabi-Yau Manifolds	239
9.7.1 <i>Holonomy</i>	241
9.7.2 <i>Consequences of $SU(3)$ holonomy</i>	242
9.7.3 <i>The CY moduli space</i>	243
9.8 $\mathcal{N} = 1_4$ Heterotic Compactifications	245
9.8.1 <i>The low-energy $\mathcal{N} = 1_4$ heterotic spectrum</i>	246
9.9 K3 Compactification of the Type-II String	247
9.10 $\mathcal{N} = 2_6$ Orbifolds of the Type-II String	250
9.11 CY Compactifications of Type-II Strings	252
9.12 Mirror Symmetry	253
9.13 Absence of Continuous Global Symmetries	255

9.14	Orientifolds	256
9.14.1	<i>K3 orientifolds</i>	257
9.14.2	<i>The Klein bottle amplitude</i>	258
9.14.3	<i>D-branes on T^4/\mathbb{Z}_2</i>	260
9.14.4	<i>The cylinder amplitude</i>	263
9.14.5	<i>The Möbius strip amplitude</i>	265
9.14.6	<i>Tadpole cancellation</i>	266
9.14.7	<i>The open string spectrum</i>	267
9.15	D-branes at Orbifold Singularities	268
9.16	Magnetized Compactifications and Intersecting Branes	271
9.16.1	<i>Open strings in an internal magnetic field</i>	272
9.16.2	<i>Intersecting branes</i>	277
9.16.3	<i>Intersecting D_6-branes</i>	278
9.17	Where is the Standard Model?	280
9.17.1	<i>The heterotic string</i>	280
9.17.2	<i>Type-II string theory</i>	282
9.17.3	<i>The type-I string</i>	283
9.18	Unification	284
	Bibliography	286
	Exercises	287
10	Loop Corrections to String Effective Couplings	294
10.1	Calculation of Heterotic Gauge Thresholds	296
10.2	On-shell Infrared Regularization	301
10.2.1	<i>Evaluation of the threshold</i>	303
10.3	Heterotic Gravitational Thresholds	304
10.4	One-loop Fayet-Iliopoulos Terms	305
10.5	$\mathcal{N} = 1, 2_4$ Examples of Threshold Corrections	309
10.6	$\mathcal{N} = 2_4$ Universality of Thresholds	312
10.7	Unification Revisited	315
	Bibliography	317
	Exercises	317
11	Duality Connections and Nonperturbative Effects	320
11.1	Perturbative Connections	322
11.2	BPS States and BPS Bounds	323
11.3	Nonrenormalization Theorems and BPS-saturated Couplings	325
11.4	Type-IIA versus M-theory	328
11.5	Self-duality of the Type-IIB String	331
11.6	U-duality of Type-II String Theory	334
11.6.1	<i>U-duality and bound states</i>	336
11.7	Heterotic/Type I Duality in Ten Dimensions	336
11.7.1	<i>The type-I D_1-string</i>	339

11.7.2	<i>The type-I D_5-brane</i>	341
11.7.3	<i>Further consistency checks</i>	343
11.8	M-theory and the $E_8 \times E_8$ Heterotic String	344
11.8.1	<i>Unification at strong heterotic coupling</i>	347
11.9	Heterotic/Type II Duality in Six Dimensions	348
11.9.1	<i>Gauge symmetry enhancement and singular K3 surfaces</i>	352
11.9.2	<i>Heterotic/type II duality in four dimensions</i>	355
11.10	Conifold Singularities and Conifold Transitions	356
	Bibliography	362
	Exercises	363
12	Black Holes and Entropy in String Theory	369
12.1	A Brief History	369
12.2	The Strategy	370
12.3	Black-hole Thermodynamics	371
12.3.1	<i>The Euclidean continuation</i>	372
12.3.2	<i>Hawking evaporation and greybody factors</i>	374
12.4	The Information Problem and the Holographic Hypothesis	375
12.5	Five-dimensional Extremal Charged Black Holes	377
12.6	Five-dimensional Nonextremal RN Black Holes	379
12.7	The Near-horizon Region	381
12.8	Semiclassical Derivation of the Hawking Rate	383
12.9	The Microscopic Realization	386
12.9.1	<i>The world-volume theory of the bound state</i>	387
12.9.2	<i>The low-energy SCFT of the D_1-D_5 bound state</i>	389
12.9.3	<i>Microscopic calculation of the entropy</i>	391
12.9.4	<i>Microscopic derivation of Hawking evaporation rates</i>	394
12.10	Epilogue	396
	Bibliography	398
	Exercises	399
13	The Bulk/Boundary Correspondence	403
13.1	Large-N Gauge Theories and String Theory	405
13.2	The Decoupling Principle	408
13.3	The Near-horizon Limit	409
13.4	Elements of the Correspondence	410
13.5	Bulk Fields and Boundary Operators	413
13.6	Holography	416
13.7	Testing the AdS_5/CFT_4 Correspondence	417
13.7.1	<i>The chiral spectrum of $\mathcal{N} = 4$ gauge theory</i>	418
13.7.2	<i>Matching to the string theory spectrum</i>	420
13.7.3	<i>$\mathcal{N} = 8$ five-dimensional gauged supergravity</i>	422
13.7.4	<i>Protected correlation functions and anomalies</i>	422

13.8	Correlation Functions	424
13.8.1	<i>Two-point functions</i>	425
13.8.2	<i>Three-point functions</i>	427
13.8.3	<i>The gravitational action and the conformal anomaly</i>	428
13.9	Wilson Loops	433
13.10	AdS ₅ /CFT ₄ Correspondence at Finite Temperature	436
13.10.1	<i>$\mathcal{N} = 4$ super Yang-Mills theory at finite temperature</i>	436
13.10.2	<i>The near-horizon limit of black D₃-branes</i>	438
13.10.3	<i>Finite-volume and large-N phase transitions</i>	440
13.10.4	<i>Thermal holographic physics</i>	443
13.10.5	<i>Spatial Wilson loops in (a version of) QCD₃</i>	444
13.10.6	<i>The glueball mass spectrum</i>	446
13.11	AdS ₃ /CFT ₂ Correspondence	447
13.11.1	<i>The greybody factors revisited</i>	450
13.12	The Holographic Renormalization Group	450
13.12.1	<i>Perturbations of the CFT₄</i>	451
13.12.2	<i>Domain walls and flow equations</i>	452
13.12.3	<i>A RG flow preserving $\mathcal{N} = 1$ supersymmetry</i>	454
13.13	The Randall-Sundrum Geometry	456
13.13.1	<i>An alternative to compactification</i>	459
	Bibliography	462
	Exercises	463
14	String Theory and Matrix Models	470
14.1	M(atr)ix Theory	471
14.1.1	<i>Membrane quantization</i>	471
14.1.2	<i>Type-IIA D₀-branes and DLCQ</i>	473
14.1.3	<i>Gravitons and branes in M(atr)ix theory</i>	476
14.1.4	<i>The two-graviton interaction from M(atr)ix theory</i>	477
14.2	Matrix Models and D = 1 Bosonic String Theory	479
14.2.1	<i>The continuum limit</i>	481
14.2.2	<i>Solving the matrix model</i>	482
14.2.3	<i>The double-scaling limit</i>	485
14.2.4	<i>The free-fermion picture</i>	487
14.3	Matrix Description of D = 2 String Theory	488
14.3.1	<i>Matrix quantum mechanics and free fermions on the line</i>	490
14.3.2	<i>The continuum limit</i>	492
14.3.3	<i>The double-scaling limit</i>	494
14.3.4	<i>D-particles, tachyons, and holography</i>	496
	Bibliography	498
	Exercises	498
	Appendix A Two-dimensional Complex Geometry	503

Appendix B	Differential Forms	505
Appendix C	Theta and Other Elliptic Functions	507
	C.1 ϑ and Related Functions	507
	C.2 The Weierstrass Function	510
	C.3 Modular Forms	510
	C.4 Poisson Resummation	512
Appendix D	Toroidal Lattice Sums	513
Appendix E	Toroidal Kaluza-Klein Reduction	516
Appendix F	The Reissner-Nordström Black Hole	519
Appendix G	Electric-magnetic Duality in $D = 4$	522
Appendix H	Supersymmetric Actions in Ten and Eleven Dimensions	525
	H.1 The $\mathcal{N} = 1_{11}$ Supergravity	526
	H.2 Type-IIA Supergravity	527
	H.3 Type-IIB Supergravity	528
	H.4 Type-II Supergravities: The Democratic Formulation	529
	H.5 $\mathcal{N} = 1_{10}$ Supersymmetry	530
Appendix I	$\mathcal{N} = 1, 2$, Four-dimensional Supergravity Coupled to Matter	533
	I.1 $\mathcal{N} = 1_4$ Supergravity	533
	I.2 $\mathcal{N} = 2_4$ Supergravity	535
Appendix J	BPS Multiplets in Four Dimensions	537
Appendix K	The Geometry of Anti-de Sitter Space	541
	K.1 The Minkowski Signature AdS	541
	K.2 Euclidean AdS	544
	K.3 The Conformal Structure of Flat Space	546
	K.4 Fields in AdS	548
	K.4.1 <i>The wave equation in Poincaré coordinates</i>	549
	K.4.2 <i>The bulk-boundary propagator</i>	550
	K.4.3 <i>The bulk-to-bulk propagator</i>	551
	<i>Bibliography</i>	553
	<i>Index</i>	575
