

Introduction to

# Elementary Particle Physics

**Alessandro Bettini**

CAMBRIDGE

# Contents

<i>Preface</i>	<i>page</i> ix
<i>Acknowledgments</i>	xiii
1 Preliminary notions	1
1.1 Mass, energy, linear momentum	1
1.2 The law of motion of a particle	4
1.3 The mass of a system of particles, kinematic invariants	5
1.4 Systems of interacting particles	9
1.5 Natural units	11
1.6 Collisions and decays	13
1.7 Hadrons, leptons and quarks	19
1.8 The fundamental interactions	21
1.9 The passage of radiation through matter	23
1.10 Sources of high-energy particles	28
1.11 Particle detectors	36
Problems	52
Further reading	57
2 Nucleons, leptons and bosons	59
2.1 The muon and the pion	59
2.2 Strange mesons and hyperons	62
2.3 The quantum numbers of the charged pion	65
2.4 Charged leptons and neutrinos	69
2.5 The Dirac equation	74
2.6 The positron	76
2.7 The antiproton	78
Problems	81
Further reading	83
3 Symmetries	84
3.1 Symmetries	84

## Contents

3.2	Parity	85
3.3	Particle–antiparticle conjugation	88
3.4	Time reversal and <i>CPT</i>	90
3.5	The parity of the pion	91
3.6	Pion decay	92
3.7	Quark flavours and baryonic number	95
3.8	Leptonic flavours and lepton number	97
3.9	Isospin	98
3.10	The sum of two isospins: the product of two representations	101
3.11	<i>G</i> -parity	104
	Problems	105
	Further reading	108
4	Hadrons	109
4.1	Resonances	109
4.2	The $3/2^+$ baryons	113
4.3	The Dalitz plot	119
4.4	Spin, parity, isospin analysis of three-pion systems	122
4.5	Pseudoscalar and vector mesons	126
4.6	The quark model	131
4.7	Mesons	133
4.8	Baryons	136
4.9	Charm	142
4.10	The third family	151
4.11	The elements of the Standard Model	157
	Problems	160
	Further reading	163
5	Quantum electrodynamics	164
5.1	Charge conservation and gauge symmetry	164
5.2	The Lamb and Retherford experiment	165
5.3	Quantum field theory	170
5.4	The interaction as an exchange of quanta	173
5.5	The Feynman diagrams and QED	176
5.6	Analyticity and the need for antiparticles	180
5.7	Electron–positron annihilation into a muon pair	183
5.8	The evolution of $\alpha$	186
	Problems	192
	Further reading	193
6	Chromodynamics	194
6.1	Hadron production at electron–positron colliders	194
6.2	Scattering experiments	199

## Contents

6.3	Nucleon structure	203
6.4	The colour charges	213
6.5	Colour bound states	217
6.6	The evolution of $a_s$	221
6.7	The origin of hadron mass	226
6.8	The quantum vacuum	229
	Problems	231
	Further reading	233
7	Weak interactions	234
7.1	Classification of weak interactions	234
7.2	Low-energy lepton processes and the Fermi constant	236
7.3	Parity violation	240
7.4	Helicity and chirality	245
7.5	Measurement of the helicity of leptons	249
7.6	Violation of the particle–antiparticle conjugation	256
7.7	Cabibbo mixing	257
7.8	The Glashow, Iliopoulos and Maiani mechanism	260
7.9	The quark mixing matrix	262
7.10	Weak neutral currents	271
	Problems	272
	Further reading	275
8	The neutral $K$ and $B$ mesons and $\mathcal{CP}$ violation	276
8.1	The states of the neutral $K$ system	276
8.2	Strangeness oscillations	279
8.3	Regeneration	282
8.4	$\mathcal{CP}$ violation	284
8.5	Oscillation and $\mathcal{CP}$ violation in the neutral $B$ system	288
8.6	$\mathcal{CP}$ violation in meson decays	298
	Problems	302
	Further reading	303
9	The Standard Model	304
9.1	The electroweak interaction	304
9.2	Structure of the weak neutral currents	307
9.3	Electroweak unification	309
9.4	Determination of the electroweak angle	313
9.5	The intermediate vector bosons	320
9.6	The UA1 experiment	324
9.7	The discovery of $W$ and $Z$	329
9.8	The evolution of $\sin^2\theta_W$	336
9.9	Precision tests at LEP	338

## Contents

9.10	The interaction between intermediate bosons	344
9.11	The search for the Higgs boson	347
	Problems	350
	Further reading	353
10	Beyond the Standard Model	354
10.1	Neutrino mixing	354
10.2	Neutrino oscillation	358
10.3	Flavour transition in matter	367
10.4	The experiments	373
10.5	Limits on neutrino mass	379
10.6	Challenges	382
	Further reading	385
	<i>Appendix 1 Greek alphabet</i>	386
	<i>Appendix 2 Fundamental constants</i>	387
	<i>Appendix 3 Properties of elementary particles</i>	388
	<i>Appendix 4 Clebsch–Gordan coefficients</i>	393
	<i>Appendix 5 Spherical harmonics and d-functions</i>	395
	<i>Appendix 6 Experimental and theoretical discoveries in particle physics</i>	396
	<i>Solutions</i>	399
	<i>References</i>	418
	<i>Index</i>	424
