

ANEMIAS

A microscopic view of various red blood cells against a dark background. The cells are shown in shades of red and pink. Some are normal biconcave discs, while others are elongated, fragmented, or have irregular shapes, illustrating different types of anemia.

AND OTHER RED CELL DISORDERS

Kenneth R. Bridges | Howard A. Pearson

CONTENTS

Preface / ix

SECTION I: OVERVIEW OF ANEMIA

1

- 1 Principles of Anemia Evaluation / 3
- 2 Anemia and Age / 28
- 3 Anemia and Ethnicity / 38
- 4 Anemia and Pregnancy / 45
- 5 Cancer and Anemia / 58
- 6 Malaria and the Red Cell / 81

SECTION II: NUTRITION AND ANEMIA

95

- 7 Iron Deficiency / 97
- 8 Nutritional Anemias / 132

SECTION III: HORMONE DEFICIENCY

163

- 9 Anemia and Endocrine Hormones / 165

SECTION IV: STEM CELL DYSFUNCTION **183**

- 10 Pediatric Bone Marrow Failure Syndromes / 185
- 11 Acquired Bone Marrow Failure Syndromes / 193
- 12 The Myelodysplastic Syndromes / 207

SECTION V: HEMOGLOBIN DISORDERS **243**

- 13 Sickle Cell Disease / 245
- 14 Thalassemia / 277

SECTION VI: ENZYMOPATHIES **303**

- 15 G6PD Deficiency / 305
- 16 Pyruvate Kinase Deficiency / 321

SECTION VII: MEMBRANE DISORDERS **329**

- 17 Anemias Associated with Erythrocyte Membrane Abnormalities / 331

SECTION VIII: IMMUNE DYSFUNCTION **341**

- 18 Erythroblastosis Fetalis (Immune Hemolytic Disease of the Newborn) / 343
- 19 Immune Hemolytic Anemia / 350

Index / 367
