

Cytogenetics, FISH and molecular testing in hematologic malignancies

informa
healthcare

Wojciech Gorczyca

Contents

Preface	vii
Acknowledgments	ix
Chapter 1. Introduction	1
Karyotype	2
Nomenclature	3
Conventional cytogenetics	4
Fluorescence in situ hybridization	9
Molecular pathology	19
Immunophenotyping by flow cytometry	23
Immunohistochemistry	26
Chapter 2. Applications of cytogenetics, FISH, and PCR in diagnosis, prognosis, and disease monitoring	31
Most common chromosomal/molecular abnormalities	31
Application of chromosomal and molecular markers in diagnosis	97
Application of chromosomal and molecular markers in prognostification	106
Application of chromosomal and molecular markers in disease monitoring	108
Chapter 3. Hematologic malignancies: correlation between morphology, phenotype, and chromosomal/genetic markers	115
B-cell lymphoproliferations	115
Peripheral (mature) T-cell lymphoproliferative disorders	166
Hodgkin lymphoma	182
Acute myeloid leukemia	183
Precursor lymphoblastic lymphoma/leukemia (acute lymphoblastic leukemia)	198
Chronic myeloproliferative disorders	205
Mastocytosis	224

Myeloproliferative/myelodysplastic diseases	225
Myelodysplastic syndromes	226
Abbreviations/terminology	233
References	235
Index	311
