Contents

List of figures	xi
List of tables	xv
Preface	xix
Author Attribution	xxiii
1 Introduction to Clinical Trials	1
1.1 History and Background	3
1.2 Ethics of Clinical Research	5
1.3 Types of Research Design and Types of Trials	9
1.4 The Need for Clinical Trials	15
1.5 The Randomization Principle	18
1.6 Timing of a Clinical Trial	18
1.7 Trial Organization	20
1.8 Protocol and Manual of Operations	22
1.9 Regulatory Issues	22
1.10 Overview of the Book	26
2 Defining the Question	29
2.1 Statistical Framework	31
2.2 Elements of Study Question	40
2.3 Outcome or Response Measures	44
2.4 The Surrogate Outcome	56
2.5 Composite Outcomes	64
2.6 Summary	73
2.7 Problems	73
3 Study Design	75
3.1 Early Phase Trials	76
3.2 Phase III/IV Trials	85
3.3 Non-inferiority Designs	101
3.4 Screening, Prevention, and Therapeutic Designs	106
3.5 Adaptive Designs	109
3.6 Conclusions	112

3.7	Problems	112
4	Sample Size	115
4.1	Sample Size versus Information	116
4.2	A General Setup for Frequentist Designs	118
4.3	Loss to Follow-up and Non-adherence	122
4.4	Survival Data	124
4.5	Clustered Data	134
4.6	Tests for Interaction	136
4.7	Equivalence/Non-inferiority Trials	137
4.8	Other Considerations	138
4.9	Problems	139
5	Randomization	141
5.1	The Role of Randomization	141
5.2	Fixed Randomization Procedures	148
5.3	Treatment- and Response-Adaptive Randomization Procedures	155
5.4	Covariate-Adaptive Randomization Procedures	161
5.5	Summary and Recommendations	165
5.6	Problems	168
6	Data Collection and Quality Control	171
6.1	Planning for Collection of Clinical Trial Data	172
6.2	Categories of Clinical Data	185
6.3	Data Quality Control	194
6.4	Conclusions	199
7	Survival Analysis	201
7.1	Background	201
7.2	Estimation of Survival Distributions	203
7.3	Comparison of Survival Distributions	213
7.4	Regression Models	219
7.5	Composite Outcomes	227
7.6	Summary	228
7.7	Problems	229
8	Longitudinal Data	231
8.1	A Clinical Longitudinal Data Example	232
8.2	The Subject-specific Model	234
8.3	Two-stage Estimation	237
8.4	The Random-effects, Subject-specific Model	242
8.5	The Population-average (Marginal) Model	246
8.6	Restricted Maximum Likelihood Estimation (REML)	252
8.7	Standard Errors	253
8.8	Testing	255

8.9	Additional Levels of Clustering	258
8.10	Generalized Estimating Equations for Non-normal Data	260
8.11	Missing Data	263
8.12	Summary	264
9	Quality of Life	267
9.1	Defining QoL	268
9.2	Types of QoL Assessments	268
9.3	Selecting a QoL Instrument	271
9.4	Developing a QoL Instrument	273
9.5	Quality of Life Data	273
9.6	Analysis of QoL Data	275
9.7	Summary	286
10	Data Monitoring and Interim Analysis	289
10.1	Data and Safety Monitoring	290
10.2	Examples	292
10.3	The Repeated Testing Problem	293
10.4	Group Sequential Tests	299
10.5	Triangular Test	311
10.6	Curtailment Procedures	315
10.7	Inference Following Sequential Tests	322
10.8	Discussion	329
10.9	Problems	336
11	Selected Issues in the Analysis	339
11.1	Bias in the Analysis of Clinical Trial Data	339
11.2	Choice of Analysis Population	340
11.3	Missing Data	354
11.4	Subgroup Analyses	364
11.5	Multiple Testing Procedures	370
11.6	Summary	375
11.7	Problems	376
12	Closeout and Reporting	377
12.1	Closing Out a Trial	377
12.2	Reporting Trial Results	378
12.3	Problems	392
A	Delta Method, Maximum Likelihood Theory, and Information	393
A.1	Delta Method	393
A.2	Asymptotic Theory for Likelihood Based Inference	393
A.3	Hypothesis Testing	395
A.4	Computing the MLE	399

A.5	Information	400
A.6	Brownian Motion	403
