
Resource Allocation in Multiuser Multicarrier Wireless Systems

Ian Wong and Brian Evans

Springer

Contents

1 **Introduction** 1
- 1.1 Next-generation Wireless Communication Systems 2
  - 1.1.1 Evolution of Cellular Standards to 3GPP-LTE 3
  - 1.1.2 Evolution of Broadband Access Standards to IEEE 802.16e 6
- 1.2 Orthogonal Frequency Division Multiple Access 8
  - 1.2.1 Overview of OFDM 9
  - 1.2.2 Overview of OFDMA 10
- 1.3 Summary 12
  - 1.3.1 Thesis Statement 12
  - 1.3.2 Contributions 13
  - 1.3.3 Organization 14
- 1.4 Nomenclature 14

2 **Background** 17
- 2.1 Introduction 17
- 2.2 Review of Related Work 17
  - 2.2.1 Scheduling in Wireless Networks 17
  - 2.2.2 Multiuser Information Theory 18
  - 2.2.3 Physical Layer (PHY) Transmit Optimization 18
  - 2.2.4 PHY-MAC Cross-layer Optimization 21
  - 2.2.5 Comparison of Related Work 21
- 2.3 A New Approach to OFDMA Resource Allocation 22
- 2.4 System Model 24
  - 2.4.1 OFDMA Signal Model 24
  - 2.4.2 Multiuser Statistical Fading Channel Model 24
  - 2.4.3 Optimization Variables 27
  - 2.4.4 PHY-MAC Interaction 29
- 2.5 Conclusion 29

3 Weighted-sum rate Maximization with Perfect CSI 31
3.1 Introduction 31
3.2 Continuous Rate Maximization with perfect CSI and CDI 31
3.2.1 Problem Formulation 31
3.2.2 Dual Optimization Framework 33
3.2.3 Numerical Evaluation of the Expected Dual 36
3.2.4 Optimal Subcarrier and Power Allocation 37
3.2.5 Complexity Analysis 38
3.2.6 Instantaneous Weighted Sum Rate Maximization 38
3.2.7 constant power Allocation 41
3.2.8 Analysis of the Duality Gap 41
3.3 Discrete Rate Maximization with perfect CSI and CDI 46
3.3.1 Problem Formulation 46
3.3.2 Dual Optimization Framework 46
3.3.3 Numerical Evaluation of the Expected Dual 48
3.3.4 Optimal Discrete Rate, Subcarrier, and Power Allocation 49
3.4 Numerical Results 50
3.4.1 Continuous Rate Allocation 51
3.4.2 Discrete Rate Allocation 54
3.4.3 Complexity Comparison 56
3.5 Conclusion 57

4 Weighted-Sum Rate Maximization with Partial CSI 59
4.1 Introduction 59
4.2 Partial Channel State Information Model 60
4.3 Continuous Rate Maximization with Partial CSI and CDI 62
4.3.1 Problem Formulation 62
4.3.2 Dual Optimization Framework 63
4.3.3 Power Allocation Function Approximation 64
4.3.4 Optimal Subcarrier and Power Allocation 65
4.3.5 Complexity Analysis 66
4.4 Discrete Rate Maximization with Partial CSI and CDI 66
4.4.1 Closed-form average BER function 67
4.4.2 Closed-form power allocation function 68
4.4.3 Closed-form average rate function 68
4.4.4 Problem Formulation 69
4.4.5 Dual Optimization Framework 70
4.4.6 Complexity Analysis 71
4.5 Numerical Results 72
4.5.1 Continuous Rate Case 72
4.5.2 Discrete Rate Case 72
4.5.3 Complexity Comparison 76
4.6 Conclusion 76

5 Rate Maximization with Proportional Rate Constraints ... 79
5.1 Introduction ... 79
5.2 Proportional Rate Maximization with Perfect CSI and CDI ... 80
5.2.1 Problem Formulation ... 80
5.2.2 Dual Optimization Framework ... 81
5.2.3 Computation of the Per-user Ergodic Rate ... 83
5.2.4 Complexity Analysis ... 85
5.2.5 Extension to Discrete Rates and/or Imperfect CSI ... 85
5.3 Adaptive algorithms for Rate Maximization without CDI ... 85
5.3.1 Overview of Stochastic Approximation ... 85
5.3.2 Stochastic Approximation Solution to the Dual Problem 86
5.3.3 Proof of Convergence ... 88
5.3.4 Complexity Analysis ... 90
5.3.5 Extension to Other Formulations ... 90
5.4 Results and Discussion ... 91
5.5 Conclusion ... 93

6 Conclusion ... 95
6.1 Summary ... 95
6.2 Future Work ... 97
6.2.1 Other Formulations ... 97
6.2.2 MAC-PHY Cross-layer Scheduling ... 99
6.2.3 MIMO-OFDMA ... 99
6.2.4 Multi-cell OFDMA ... 99
6.2.5 Multi-hop OFDMA ... 100

A Derivation of the inverse function (3.10) of $g_{m,k}$ (3.8) ... 101

B Proof of Prop. 3.1 ... 103

C Derivation of (3.35) ... 105

D Derivation of the cdf (3.39) and pdf (3.40) of $g^d_{m,k}$ (3.38) ... 107

E Derivation of (4.30) ... 109

References ... 111
