

INTERNATIONAL EDITION—NOT FOR SALE IN NORTH AMERICA

GENETICS

ANALYSIS OF GENES AND GENOMES
SEVENTH EDITION

DANIEL L. HARTL AND ELIZABETH W. JONES

CONTENTS

| | |
|-------------------|--------|
| Preface | xv |
| Acknowledgements | xxiii |
| About the Authors | xxvi |
| In Memoriam | xxvii |
| About the Cover | xxviii |

Genes, Genomes, and Genetic Analysis

| | |
|--------------------------------------------------------------|-----------------------------------------------|
| 1.1 DNA: The Genetic Material | Analysis of Complementation Data |
| Experimental Proof of the Genetic Function of DNA | Other Applications of Genetic Analysis |
| Genetic Role of DNA in Bacteriophage | |
| 1.2 DNA Structure and Replication | 1.5 Gene Expression: The Central Dogma |
| An Overview of DNA Replication | Transcription |
| | Translation |
| 1.3 Genes and Proteins | The Genetic Code |
| Inborn Errors of Metabolism as a Cause of Hereditary Disease | 1.6 Mutation |
| Mutant Genes and Defective Proteins | 1.7 Genes and Environment |
| 1.4 Genetic Analysis | 1.8 The Molecular Unity of Life |
| Complementation Test for Mutations in the Same Gene | Prokaryotes and Eukaryotes |
| | Evolutionary Relationships Among Eukaryotes |
| | Genomes and Proteomes |

DNA Structure and Genetic Variation

| | |
|------------------------------------------------------------------------|--------------------------------------------------------|
| 2.1 Genetic Differences Among Individuals | 2.5 The Terminology of Genetic Analysis |
| DNA Markers as Landmarks in Chromosomes | 2.6 Types of DNA Markers Present in Genomic DNA |
| 2.2 The Molecular Structure of DNA | Single-Nucleotide Polymorphisms (SNPs) |
| Polynucleotide Chains | Restriction Fragment Length Polymorphisms (RFLPs) |
| Base Pairing and Base Stacking | Tandem Repeat Polymorphisms |
| Antiparallel Strands | Copy-Number Polymorphisms (CNPs) |
| DNA Structure as Related to Function | 2.7 Applications of DNA Markers |
| 2.3 The Separation and Identification of Genomic DNA Fragments | Genetic Markers, Genetic Mapping, and "Disease Genes" |
| Restriction Enzymes and Site-Specific DNA Cleavage | Other Uses for DNA Markers |
| Gel Electrophoresis | |
| Nucleic Acid Hybridization | |
| The Southern Blot | |
| 2.4 Selective Replication of Genomic DNA Fragments | |
| Constraints on DNA Replication: Primers and 5'-to-3' Strand Elongation | |
| The Polymerase Chain Reaction | |

3 Transmission Genetics: The Principle of Segregation

3.1 Morphological and Molecular Phenotypes

3.2 Segregation of a Single Gene

Phenotypic Ratios in the F_2 Generation
The Principle of Segregation
Verification of Segregation
The Testcross and the Backcross

3.3 Segregation of Two or More Genes

The Principle of Independent Assortment
The Testcross with Unlinked Genes
Three or More Genes

3.4 Probability in Genetic Analysis

Elementary Outcomes and Events
Probability of the Union of Events

Probability of the Intersection of Events
Conditional Probability
Bayes' Theorem

3.5 Human Pedigree Analysis

Characteristics of Dominant and Recessive Inheritance
Most Human Genetic Variation is Not "Bad"
Molecular Markers in Human Pedigrees

3.6 Incomplete Dominance and Epistasis

Multiple Alleles
Human ABO Blood Groups
Epistasis

Chromosomes and Sex-Chromosome Inheritance

4.1 The Stability of Chromosome Complements

4.2 Mitosis

4.3 Meiosis

The First Meiotic Division: Reduction
The Second Meiotic Division: Equation

4.4 Sex-Chromosome Inheritance

Chromosomal Determination of Sex
X-Linked Inheritance
Pedigree Characteristics of Human X-linked Inheritance
Heterogametic Females

Nondisjunction as Proof of the Chromosome Theory of Heredity
Sex Determination in *Drosophila*

4.5 Probability in the Prediction of Progeny Distributions

Using the Binomial Distribution in Genetics
Meaning of the Binomial Coefficient

4.6 Testing Goodness of Fit to a Genetic Hypothesis

The Chi-Square Method
Are Mendel's Data Too Good to Be True?

Genetic Linkage and Chromosome Mapping

5.1 Linkage and Recombination of Genes in a Chromosome

Coupling versus Repulsion of Syntenic Alleles
The Chi-Square Test for Linkage
Each Pair of Linked Genes Has a Characteristic Frequency of Recombination
Recombination in Females versus Males

5.2 Genetic Mapping

Map Distance and Frequency of Recombination
Crossing-over

Recombination Between Genes Results from a Physical Exchange Between Chromosomes
Crossing-over Takes Place at the Four-Strand Stage of Meiosis
Multiple Crossovers

5.3 Genetic Mapping in a Three-Point Testcross

Chromosome Interference in Double Crossovers
Genetic Mapping Functions
Genetic Map Distance and Physical Distance

5.4 Genetic Mapping in Human Pedigrees

Maximum Likelihood and Lod Scores

5.5 Mapping by Tetrad Analysis

Analysis of Unordered Tetrads

Genetic Mapping with Unordered Tetrads

Analysis of Ordered Tetrads

5.6 Special Features of Recombination

Recombination within Genes

Mitotic Recombination

Molecular Biology of DNA Replication and Recombination

6.1 Problems of Initiation, Elongation, and Incorporation Error

6.2 Semiconservative Replication of Double-Stranded DNA

The Meselson–Stahl Experiment

Semiconservative Replication of DNA in Chromosomes

Theta Replication of Circular DNA Molecules

Rolling-Circle Replication

Multiple Origins and Bidirectional Replication in Eukaryotes

6.3 Unwinding, Stabilization, and Stress Relief

6.4 Initiation by a Primosome Complex

6.5 Chain Elongation and Proofreading

6.6 Discontinuous Replication of the Lagging Strand

Fragments in the Replication Fork

The Joining of Precursor Fragments

6.7 Terminator Sequencing of DNA

Sanger Sequencing

Massively Parallel Sequencing

6.8 Molecular Mechanisms of Recombination

Gene Conversion and Mismatch Repair

Double-Strand Break and Repair Model

Molecular Organization of Chromosomes

7.1 Genome Size and Evolutionary Complexity: The C-Value Paradox

7.2 The Supercoiling of DNA

Topoisomerase Enzymes

7.3 The Structure of Bacterial Chromosomes

7.4 The Structure of Eukaryotic Chromosomes

The Nucleosome: The Structural Unit of Chromatin

The Nucleosome Core Particle

Chromosome Territories in the Nucleus

Chromosome Condensation

7.5 Polytene Chromosomes

7.6 Repetitive Nucleotide Sequences in Eukaryotic Genomes

Kinetics of DNA Renaturation

Analysis of Genome Size and Repetitive Sequences by Renaturation Kinetics

7.7 Unique and Repetitive Sequences in Eukaryotic Genomes

Unique Sequences

Highly Repetitive Sequences

Middle-Repetitive Sequences

7.8 Molecular Structure of the Centromere

7.9 Molecular Structure of the Telomere

Human Karyotypes and Chromosome Behavior

8.1 The Human Karyotype

Standard Karyotypes

The Centromere and Chromosome Stability

Dosage Compensation of X-Linked Genes

The Calico Cat

Pseudoautosomal Inheritance

Active Genes in the “Inactive”

X chromosome

Gene content and Evolution of the Y Chromosome

Tracing Human History Through the Y Chromosome

8.2 Chromosome Abnormalities in Human Pregnancies

Down Syndrome and Other Viable

Trisomies

Trisomic Segregation

Sex-Chromosome Abnormalities

Environmental Effects on Nondisjunction

8.3 Chromosomal Deletions and Duplications

Deletions

Deletion Mapping

Duplications

Unequal Crossing-over in Red-Green

Color Blindness

8.4 Genetics of Chromosomal Inversions

Paracentric Inversion (Not Including the Centromere)

Pericentric Inversion (Including the Centromere)

8.5 Chromosomal Translocations

Reciprocal Translocations

Genetic Mapping of a Translocation

Breakpoint

Robertsonian Translocations

Translocations and Trisomy 21

Translocation Complexes in *Oenothera*

8.6 Genomic Position Effects on Gene Expression

8.7 Polyploidy in Plant Evolution

Sexual Versus Asexual Polyploidization

Autopolyploids and Allopolyploids

Monoploid Organisms

8.8 Genome Evolution in the Grass Family (Gramineae)

Genetics of Bacteria and Their Viruses

9.1 Mobile DNA

Plasmids

The F Plasmid: A Conjugative Plasmid

Insertion Sequences and Transposons

Mobilization of Nonconjugative Plasmids

Integrations and Antibiotic-Resistance

Cassettes

Multiple-Antibiotic-Resistant Bacteria

Pathogenicity Islands

9.2 Bacterial Genetics

Mutant Phenotypes

Mechanisms of Genetic Exchange

9.3 DNA-Mediated Transformation

9.4 Conjugation

Cointegrate Formation and Hfr Cells

Time-of-Entry Mapping

F' Plasmids

9.5 Transduction

The Phage Lytic Cycle

Generalized Transduction

9.6 Bacteriophage Genetics

Plaque Formation and Phage Mutants

Genetic Recombination in the Lytic Cycle

Genetic and Physical Maps of Phage T4

Fine Structure of the *rII* Gene in

Bacteriophage T4

9.7 Lysogeny and Specialized Transduction

Site-Specific Recombination and Lysogeny

Specialized Transduction

Molecular Biology of Gene Expression

10.1 Amino Acids, Polypeptides, and Proteins

10.2 Colinearity Between Coding Sequences and Polypeptides

10.3 Transcription

Overview of RNA Synthesis

Types of RNA Polymerase

Promoter Recognition

Mechanism of Transcription

Genetic Evidence for Promoters and

Terminators

10.4 Messenger RNA

10.5 RNA Processing in Eukaryotes

5' Capping and 3' Polyadenylation

Splicing of Intervening Sequences

Characteristics of Human Transcripts

Coupling of Transcription and RNA

Processing

Mechanism of RNA Splicing

Effects of Intron Mutations

Exon Shuffle in the Origin of New Genes

10.6 Translation

Nonsense-Mediated Decay

Initiation by mRNA Scanning

Elongation
Release
Protein Folding and Chaperones

10.7 Complex Translation Units

Polysomes
Polycistronic mRNA

10.8 The Standard Genetic Code

Genetic Evidence for a Triplet Code

How the Code Was Cracked
Features of the Standard Code
Transfer RNA and Aminoacyl-tRNA
Synthetase Enzymes
Redundancy and Wobble
Nonsense Suppression

Molecular Mechanisms of Gene Regulation

11.1 Transcriptional Regulation in Prokaryotes

Inducible and Repressible Systems of
Negative Regulation
Positive Regulation

11.2 The Operon System of Gene Regulation

Lac⁻ Mutants
Inducible and Constitutive Synthesis and
Repression
The Repressor
The Operator Region
The Promoter Region
The Operon System of Transcriptional
Regulation
Positive Regulation of the Lactose Operon
Regulation of the Tryptophan Operon

11.3 Regulation Through Transcription Termination

Attenuation
Riboswitches

11.4 Regulation in Bacteriophage Lambda

11.5 Transcriptional Regulation in Eukaryotes

Galactose Metabolism in Yeast
Transcriptional Activator Proteins
Transcriptional Enhancers and
Transcriptional Silencers
Deletion Scanning

The Eukaryotic Transcription Complex
Chromatin-Remodeling Complexes
Alternative Promoters

11.6 Epigenetic Mechanisms of Transcriptional Regulation

Cytosine Methylation
Methylation and Transcriptional
Inactivation
Cosuppression Through Transcriptional
Silencing
Genomic Imprinting in the Female and
Male Germ Lines

11.7 Regulation Through RNA Processing and Decay

Alternative Splicing
Messenger RNA Stability

11.8 RNA Interference

11.9 Translational Control

Small Regulatory RNAs Controlling
Translation

11.10 Programmed DNA Rearrangements

Gene Amplification
Antibody and T-Cell Receptor Variability
Mating-Type Interconversion
Transcriptional Control of Mating Type

Genomics, Proteomics, and Transgenics

12.1 Site-Specific DNA Cleavage and Cloning Vectors

Production of DNA Fragments with
Defined Ends
Recombinant DNA Molecules
Plasmid, Lambda, and Cosmid Vectors

12.2 Cloning Strategies

Joining DNA Fragments

Insertion of a Particular DNA Molecule
Into a Vector
The Use of Reverse Transcriptase: cDNA
and RTPCR

12.3 Detection of Recombinant Molecules

Gene Inactivation in the Vector Molecule
Cloning of Large DNA Fragments
Screening for Particular Recombinants

12.4 Genomics and Proteomics

- Genome Annotation
- Comparative Genomics
- Transcriptional Profiling
- Two-Hybrid Analysis of Protein Interactions

12.5 Transgenic Organisms

- Germ-Line Transformation in Animals
- Genetic Engineering in Plants
- Transformation Rescue

- Site-Directed Mutagenesis and Knockout Mutations

12.6 Some Applications of Genetic Engineering

- Giant Salmon with Engineered Growth Hormone
- Nutritionally Engineered Rice
- Production of Useful Proteins
- Genetic Engineering with Animal Viruses

13 Genetic Control of Development

13.1 Genetic Determinants of Development

13.2 Early Embryonic Development in Animals

- Autonomous Development and Intercellular Signaling
- Composition and Organization of Oocytes
- Early Development and Activation of the Zygotic Genome

13.3 Genetic Analysis of Development in the Nematode

- Analysis of Cell Lineages
- Mutations Affecting Cell Lineages
- Programmed Cell Death
- Loss-of-Function and Gain-of-Function Alleles
- Epistasis in the Analysis of Developmental Switches

13.4 Genetic Control of Development in *Drosophila*

- Maternal-Effect Genes and Zygotic Genes
- Genetic Basis of Pattern Formation in Early Development
- Coordinate Genes
- Gap Genes
- Pair-Rule Genes
- Segment-Polarity Genes
- Interactions in the Regulatory Hierarchy
- Metamorphosis of the Adult Fly
- Homeotic Genes
- HOX* Genes in Evolution

13.5 Genetic Control of Development in Higher Plants

- Flower Development in *Arabidopsis*
- Combinatorial Determination of the Floral Organs

14 Molecular Mechanisms of Mutation and DNA Repair

14.1 Types of Mutations

- Germ-Line and Somatic Mutations
- Conditional Mutations
- Classification by Function

14.2 The Molecular Basis of Mutation

- Nucleotide Substitutions
- Missense Mutations: The Example of Sickle-Cell Anemia
- Insertions, Deletions, and Frameshift Mutations
- Dynamic Mutation of Trinucleotide Repeats
- Cytosine Methylation and Gene Inactivation

14.3 Transposable Elements

- Molecular Mechanisms of Transposition
- Transposable Elements as Agents of Mutation

- Transposable Elements in the Human Genome

- RIP: A Defense Against Transposons

14.4 Spontaneous Mutation

- The Nonadaptive Nature of Mutation
- Estimation of Mutation Rates
- Hot Spots of Mutation

14.5 Mutagens

- Depurination
- Oxidation
- Base-Analog Mutagens
- Chemical Agents That Modify DNA
- Intercalating Agents
- Ultraviolet Irradiation
- Ionizing Radiation
- Genetic Effects of the Chernobyl Nuclear Accident

14.6 Mechanisms of DNA Repair

- Mismatch Repair
- Base Excision Repair
- AP Repair
- Nucleotide Excision Repair
- Photoreactivation
- DNA Damage Bypass
- The SOS Repair System

14.7 Reverse Mutations and Suppressor Mutations

- Intragenic Suppression
- Intergenic Suppression
- The Ames Test for Mutagen/Carcinogen Detection

Molecular Genetics of the Cell Cycle and Cancer

15.1 The Cell Cycle

- Key Events in the Cell Cycle
- Transcriptional Program of the Cell Cycle

15.2 Genetic Analysis of the Cell Cycle

- Mutations Affecting Progression Through the Cell Cycle

15.3 Progression Through the Cell Cycle

- Cyclins and Cyclin-Dependent Protein Kinases
- Targets of the Cyclin-CDK Complexes
- Triggers for the G_1/S and G_2/M Transitions
- Protein Degradation Helps Regulate the Cell Cycle

15.4 Checkpoints in the Cell Cycle

- The DNA Damage Checkpoint
- The Centrosome Duplication Checkpoint
- The Spindle Assembly Checkpoint
- The Spindle Position Checkpoint

15.5 Cancer Cells

- Oncogenes and Proto-Oncogenes
- Tumor-Suppressor Genes

15.6 Hereditary Cancer Syndromes

- Defects in Cell-Cycle Regulation and Checkpoints
- Defects in DNA Repair

15.7 Genetics of the Acute Leukemias

Mitochondrial DNA and Extranuclear Inheritance

16.1 Patterns of Extranuclear Inheritance

- Mitochondrial Genetic Diseases
- Heteroplasmy
- Maternal Inheritance and Maternal Effects
- Tracing Population History Through Mitochondrial DNA

16.2 Organelle Heredity

- RNA Editing
- The Genetic Codes of Organelles

- Leaf Variegation in Four-O'Clock Plants
- Drug Resistance in *Chlamydomonas*
- Respiration-Defective Mitochondrial Mutants
- Cytoplasmic Male Sterility in Plants

16.3 The Evolutionary Origin of Organelles

16.4 Cytoplasmic Transmission of Symbionts

16.5 Maternal Effect in Snail Shell Coiling

Molecular Evolution and Population Genetics

17.1 Molecular Evolution

- Gene Trees
- Bootstrapping
- Gene Trees and Species Trees
- Rates of Protein Evolution
- Rates of DNA Evolution
- Origins of New Genes: Orthologs and Paralogs

17.2 Population Genetics

- Allele Frequencies and Genotype Frequencies
- Random Mating and the Hardy-Weinberg Principle
- Implications of the Hardy-Weinberg Principle
- A Test for Random Mating
- Frequency of Heterozygous Genotypes

Multiple Alleles
DNA Typing
X-Linked Genes

17.3 Inbreeding

The Inbreeding Coefficient
Allelic Identity by Descent
Calculation of the Inbreeding Coefficient
from Pedigrees
Effects of Inbreeding

17.4 Genetics and Evolution

17.5 Mutation and Migration

Irreversible Mutation
Reversible Mutation

17.6 Natural Selection

Selection in a Laboratory Experiment
Selection in Diploid Organisms
Components of Fitness
Selection–Mutation Balance
Heterozygote Superiority

17.7 Random Genetic Drift

17.8 Tracing Human History Through Mitochondrial DNA

The Genetic Basis of Complex Traits

18.1 Complex Traits

Continuous, Categorical, and Threshold
Traits
The Normal Distribution

18.2 Causes of Variation

Genotypic Variation
Environmental Variation
Genetics and Environment Combined
Genotype-by-Environment Interaction and
Association

18.3 Genetic Analysis of Complex Traits

The Number of Genes Affecting Complex
Traits
Broad-Sense Heritability
Twin Studies

18.4 Artificial Selection

Narrow-Sense Heritability

Phenotypic Change with Individual
Selection: A Prediction Equation
Long-Term Artificial Selection
Inbreeding Depression and Heterosis

18.5 Correlation Between Relatives

Covariance and Correlation
The Geometrical Meaning of a Correlation
Estimation of Narrow-Sense Heritability

18.6 Heritabilities of Threshold Traits

18.7 Identification of Genes Affecting Complex Traits

Linkage Analysis in the Genetic Mapping
of Quantitative Trait Loci
The Number and Nature of QTLs
Candidate Genes for Complex Traits

Answers to Even-Numbered Problems **683**

Further Readings **701**

Word Roots **705**

Concise Dictionary of Genetics **709**

Index **735**
