

The background of the cover features a photograph of an industrial plant with several tall smokestacks emitting thick white plumes of smoke against a clear blue sky. A large, stylized, wavy graphic in shades of blue and green flows across the middle of the cover, partially overlapping the industrial scene and the title area.

About the Authors	xvii
Preface	xix
Introductory Chapter: Framework for Energy and Environmental Management in Industry	1
1 Introduction	1
2 Energy Use by Industrial Operations	2
3 Environmental Impacts of Industrial Operations	6
4 End Use Energy Efficiency	9
5 Efficiency of Using Raw Materials	10
6 Global Energy Policy Framework	11
7 Energy and Environmental Policies	14
7.1 Integrated Pollution Prevention and Control (IPPC)	14
7.2 Energy Markets Deregulation and Liberalization	14
7.3 Consumers' Choice in the Liberalized Energy Market	14
7.4 Emissions Trading	15
7.5 Compulsory Energy Efficiency Programs	16
7.5.1 ENCON Program in Thailand	16
7.6 Voluntary Programs	17
7.6.1 Eco-Management and Audit Scheme (EMAS)	17
8 Industries' Self-Motivation for Effective Energy and Environmental Performance	17
9 Environmentally Responsible Investing	19
10 Where to Look for Energy and Environmental Performance Improvements	20
11 Bibliography	21
Part I: Energy and Environmental Management System in Industry (EEMS)	23
1 Introducing the Energy and Environmental Management System	25
1.1 Introduction	25
1.2 Definition of terms	26
1.2.1 System	26
1.2.2 Management	27
1.2.3 Performance	28
1.2.4 Information	29
1.2.5 Performance Indicators	30
1.2.6 Knowledge	30

1.2.7	Management System	31
1.2.8	Environmental Impacts	31
1.2.9	Energy Performance	32
1.2.10	Environmental Performance	32
1.2.11	Performance of Materials Use	33
1.2.12	Environmental Management	34
1.2.13	Energy Management	34
1.3	Energy and Environmental Management System	35
1.4	Objectives of Energy and Environmental Management	37
1.5	Dynamics of Energy and Environmental Management	37
1.6	Human Aspects of Energy and Environmental Management	38
1.6.1	Change	39
1.6.2	Aspects of Change	40
1.6.3	Barriers to Overcome	41
1.6.4	Unawareness of Opportunities	41
1.6.5	De-motivating Aspects	42
1.6.6	Motivating People	42
1.6.7	Providing Leadership	43
1.6.8	Top Management's Visible Commitment to EEM	46
1.6.9	Decisions to be Made	47
1.6.10	Visibility	48
1.6.11	Working with People Towards a Successful EEMS Project	49
	1.6.11.1 Managers	49
	1.6.11.2 Employees	50
1.7	Initiating Training, Awareness and Motivation Programs	50
1.7.1	Management	50
1.7.2	Technical Managers and Supervisors	52
1.7.3	Awareness and Motivation for all Employees	53
1.8	Bibliography	54
2	The Energy and Environmental Management Concept	55
2.1	Introduction	55
2.2	Interactions between Energy and Production	56
2.3	Energy Cost Centers	57
2.4	Assigning Responsibilities for Energy and Environmental Performance	60
2.5	Performance Measurement System	61
2.5.1	Metrics	63
2.5.2	Measurement Data Sources	63
2.5.3	Data Handling Procedures	63
2.5.4	Data Verification	63
2.5.5	Measurement Frequency	65
2.5.6	Supporting Infrastructure	66
2.5.7	Raw Material Performance Indicators	66
2.5.8	Energy Performance Indicators	66
2.5.9	Data Adequacy	69
2.5.10	Performance Targets	70
2.5.11	Environmental Performance Indicators	70
	2.5.11.1 Integrated Pollution Prevention Control	72
	2.5.11.2 Eco-Management and Audit Scheme	74

2.5.11.3	Environmental Management Standard ISO 14000	74
2.5.11.4	Emissions Trading	74
2.5.11.5	Global Reporting Initiative	75
2.6	Effective Use of Energy and Environmental Performance Indicators	78
2.7	Concept of Energy and Environmental Management System	80
2.8	Context of Energy and Environmental Management	81
2.8.1	External Context	81
2.8.2	Internal Context	83
2.8.3	Factors that Influence Energy and Environmental Performance	85
2.9	Bibliography	86
3	Relationship between Energy Use and Production Volume	87
3.1	Introduction	87
3.2	Energy/Production Relationship by Design	87
3.3	Energy/Production Relationship by Standard Operational Procedure	89
3.4	Presenting the Dynamics of the Energy/Production Relationship by Scatter Diagram	91
3.5	Interpretation of Energy/Production Data Pattern on the Scatter Diagram	94
3.6	Statistical Methods for Energy/Production Variability Analysis	98
3.6.1	Regression Analyses	99
3.6.2	Correlation Analyses	101
3.7	Meaning and Use of the Regression Line in Energy Performance Evaluation	102
3.7.1	Quantifying and Understanding Energy/Production Variability	103
3.7.2	Fixed and Variable Energy Consumption	106
3.7.3	Specific Energy Consumption	107
3.8	Summary of Presenting and Analyzing the Energy/Production Relationship	108
3.9	Bibliography	109
4	Evaluating the Performance of Energy and Environmental Management Practice	111
4.1	Evaluation of Past Performance	111
4.2	Energy and Environmental Auditing	113
4.2.1	Scope of Energy Audit	114
4.2.2	Scope of Environmental Audit	117
4.3	Evaluating Organizational Aspects	117
4.3.1	Qualitative Evaluation	117
4.3.2	Quantitative Evaluation	119
4.4	Evaluating Operational Aspects	121
4.4.1	Planning and Preparation for Data Collection	121
4.4.2	Data Collection on Energy Consumption	121
4.4.3	Data Collection on Production Processes	123
4.4.4	Specification of Major Utilities and End-Use Equipment	123
4.4.5	Data Collection on Environmental Impacts	125
4.4.6	Assessing On-Site Metering and Control Equipment	126
4.4.7	Measurement Plan	127
4.4.8	Timing	127
4.4.9	Records and Note Keeping	129
4.4.10	Instrumentation	129
4.4.11	Calculations	129
4.4.12	Economic and Financial Analysis	129
4.4.13	Presentation of Audit Results	130

4.5	Setting a Baseline for Monitoring Performance Improvements	133
4.6	Setting Initial Targets for Performance Improvement	134
4.6.1	Setting Targets at the Company's Level	134
4.6.2	Setting Targets on ECC Level	135
4.6.3	Targets for Different Products	135
4.7	Monitoring Energy and Environmental Performance	136
4.8	Verifying Performance Improvements – CUSUM Technique	138
4.9	Moving Toward Targets – Process of Change	144
4.10	Bibliography	145
5	Implementation of the Energy and Environmental Management System	147
5.1	Introduction	147
5.2	Phases of EEMS Implementation Process	149
5.3	Preparation and Planning	149
5.3.1	Energy and Environmental Policy	150
5.3.2	Assigning Management Responsibilities for Energy and Environment	154
5.3.3	EEMS Organization	154
5.4	Implementation Plan	157
5.4.1	Initiate Awareness and Training Programs	158
5.4.1.1	Awareness and Motivation	158
5.4.1.2	Training	160
5.4.2	Installation of Performance Measurement System	163
5.4.3	Target Setting	164
5.5	EEMS Operation	166
5.5.1	Performance Data Interpretation	169
5.5.1.1	Evaluation of Operational Practice	169
5.6	Learning Through EEMS Operation	171
5.6.1	Learning Cycle	171
5.6.2	Learning through People's Performance Evaluation	173
5.7	Continuity and Communication	173
5.8	Integration of EEMS with Business Management System	175
6	Energy and Environmental Management as a Driver for Integrated Performance Management	177
6.1	Introduction	177
6.2	Integrated Performance Management in Operations	179
6.3	Strategic Aspects of Performance Management	183
6.3.1	Identifying External Factors Influencing Performance	184
6.3.1.1	Identifying Technological Changes	185
6.3.2	Organizational Fragmentation	189
6.3.2.1	Data Fragmentation	190
6.4	Integrated Performance Measurement System	191
6.4.1	Knowledge Discovery	195
6.5	Integrated Performance Management	196
6.6	Conclusion	201
6.7	Bibliography	202

Part II: Engineering Aspects of Industrial Energy Management	203
1 Introduction to Industrial Energy Systems	205
1.1 Introduction	205
1.2 Industrial Energy Systems Analysis	207
2 Industrial Steam System	211
2.1 System Description	211
2.1.1 Boilers	211
2.1.2 Steam Distribution System	212
2.1.3 Steam End-users	212
2.1.4 Condensate Return System	213
2.2 System Performance Definition	213
2.2.1 The Cost of Steam	214
2.3 Principles of Performance Analysis	217
2.3.1 Performance Improvement Opportunities	217
2.3.2 Example 1: Steam System Energy Performance Analysis	218
2.4 Analysis of Boiler Performance	223
2.4.1 Direct (Input/Output) Method	225
2.4.2 Indirect (Heat Losses) Method	227
2.4.2.1 Heat Energy Loss due to Flue Gas	227
2.4.2.2 Heat Energy Loss due to Chemically Incomplete Combustion	230
2.4.2.3 Heat Energy Loss due to Mechanically Incomplete Combustion	230
2.4.2.4 Heat Energy Loss due to Radiation	231
2.4.2.5 Heat Energy Loss due to Slag	232
2.4.2.6 Heat Energy Loss due to Blow-down	232
2.4.2.7 Summary of Indirect Boiler Efficiency Determination	233
2.4.3 Preparing a Measurement Plan for Boiler Performance Analysis	233
2.5 Factors Influencing Boiler Performance	236
2.5.1 Boiler Load	236
2.5.2 Boiler Design	236
2.5.3 Fouling of Heat Transfer Surfaces	238
2.5.3.1 Gas-side Fouling	238
2.5.3.2 Water-side Fouling	238
2.5.4 Boiler Operation Controls	240
2.5.5 Water Quality	243
2.6 Opportunities for Boiler Performance Improvement	246
2.6.1 Combustion Efficiency Improvement	247
2.6.2 Load Scheduling	249
2.6.3 Waste Heat Recovery Techniques	249
2.6.3.1 Heat Recovery from Flue Gas	249
2.6.3.2 Combustion Air Pre-Heating System	250
2.6.3.3 Heat Recovery from Boiler Blow-down	250
2.6.4 Boiler Water Treatment Improvement	251
2.6.5 Boiler Control System Improvement	251
2.7 Software for Boiler Performance Analysis	252
2.7.1 Software 4: FUELS, COMBUSTION AND ENVIRONMENTAL IMPACTS	252
2.7.2 Software 5: THERMODYNAMIC PROPERTIES OF WATER AND STEAM	254
2.7.3 Software 7: EFFICIENCY OF STEAM BOILERS	254

2.7.4	Software 9: THE HEAT EXCHANGER'S OPERATING POINT DETERMINATION	256
2.7.5	Example 2: Boiler Efficiency Improvement	256
2.7.5.1	Facility Description	256
2.7.5.2	Steam Generation and Fuel Consumption	259
2.7.5.3	Measurements, Technical Calculations and Analysis	260
2.7.5.4	Best Operation Practice	261
2.7.5.5	Efficiency Calculation Based on Measured Values	263
2.7.5.6	Summary of Performance Improvement Measures (PIMs)	265
2.8	Boiler Performance Monitoring	268
2.8.1	Values to be Monitored	268
2.9	Steam Distribution and Condensate Return System	271
2.9.1	Steam Distribution System Performance Analysis	271
2.9.2	Influencing Factors on Steam Distribution System Performance	272
2.9.2.1	Steam Leaks	273
2.9.2.2	Insulation	273
2.10	Condensate Return System	274
2.10.1	Flash Steam Recovery	275
2.10.2	Performance Improvement Opportunities	276
2.10.3	Software 8 STEAM SYSTEM INSULATION	277
2.10.4	Example 3: Steam and Condensate System Insulation Improvements	277
2.10.5	Performance Monitoring of Steam Distribution and Condensate Return System	280
2.11	Environmental Impacts	281
2.11.1	Ambient Air Pollution	281
2.11.2	Water Pollution	281
2.11.3	Carbon Emission Factors	283
2.11.4	Example 4: Practical Calculation of Carbon Emission Reduction	283
2.12	Bibliography	283
3	Industrial Electric Power System	285
3.1	Introduction	285
3.2	Description of Industrial Electric Power Systems	286
3.3	Basic Terms	286
3.3.1	Active and Reactive Power and Power Factor	286
3.3.2	Load Diagram	288
3.3.3	Peak Demand	289
3.3.4	Power and Energy	289
3.3.5	Load Factor	290
3.3.6	Quality of Power Supply	290
3.4	Tariff System	292
3.5	Main Components of Industrial Electric Power Systems	293
3.5.1	Transformers	293
3.5.2	Cables	294
3.5.3	Electric Motors	294
3.6	Performance Assessment of Industrial Electric Power Systems	297

3.7	Performance Improvement Opportunities	300
3.7.1	Load Management	301
3.7.2	Demand Control	301
3.7.2.1	Example 1: Demand Control by Stand-by Diesel Generators	303
3.7.2.2	Example 2: Relation between Load Factor, Demand Charges and Total Electricity Costs	305
3.7.3	Power Factor Correction	306
3.7.3.1	Example 3: Power Factor Correction from 0.6 to 0.9	307
3.7.4	Electric Motor Drives	308
3.7.4.1	Variable Speed Drives (VSD)	308
3.7.4.2	Correct Operational Procedure	309
3.7.4.3	Example 4: Comparison of Fan Operations with Constant and Variable Speed Control	311
3.8	Maintenance Considerations	315
3.9	Performance Monitoring	316
3.9.1	Power Quality Indicators	316
3.9.2	Electric Motor Drives – Maintenance Needs Indicators	317
3.9.3	Electric Motor Drives – Operational Practice Indicators	318
3.10	Environmental Impacts	319
3.10.1	Polychlorinated Biphenyls (PCBs)	320
3.11	Bibliography	321
4	Compressed Air System	323
4.1	System Description	323
4.1.1	Compressors	324
4.1.2	Air Pressure	325
4.1.3	Air Receiver	325
4.1.4	Water Removal	325
4.1.5	Pipe Work	327
4.1.6	Ventilation of Compressor Room	327
4.2	Performance Analysis	327
4.2.1	Compressor's Performance Graph	328
4.2.2	Measurements	329
4.2.2.1	Power	330
4.2.2.2	Pressure	330
4.2.2.3	Flow Rates	330
4.2.2.4	Temperature	331
4.2.2.5	Compressed Air Leakage Determination	331
4.3	Performance Improvement Opportunities	333
4.3.1	Operation and Maintenance	333
4.3.2	Control Systems	333
4.3.2.1	Compressors	333
4.3.2.2	Control of Compressed Air Quality Standard	336
4.3.2.3	Cooling Water Quality Control	337
4.3.3	Performance Improvement Measures	337
4.3.3.1	Compressed Air Leakage Reduction	337
4.3.3.2	Control System	337
4.3.3.3	Discharge Pressure	339
4.3.3.4	Waste Heat Recovery	339

4.4 Performance Monitoring	340
4.4.1 Values to be Monitored	340
4.5 Example: Detailed Energy Audit of Compressed Air System	341
4.5.1 System Inspection, Testing and Fault Finding	343
4.5.1.1 Activities before the Plant's Shut-down	344
4.5.1.2 Air Leak Test (during Shut-down)	345
4.5.1.3 Average Power of Compressor	348
4.5.1.4 Air Leak Test of Distribution Network (Non-Production Period)	349
4.5.1.5 Pressure Drop	350
4.5.1.6 Ventilation of Compressor Room	351
4.5.1.7 Recommendations	351
4.5.1.8 Expected Energy Savings	352
4.6 Example: Comparison of Load/Unload and Pump-up Tests	352
4.6.1 Load/Unload Test	352
4.6.2 Pump-up Test	353
4.7 Bibliography	354
5 Refrigeration System	355
5.1 Description of System	355
5.1.1 Principles of Operation	356
5.1.1.1 Vapor-Compression Refrigeration	357
5.1.1.2 Vapor-Absorption Refrigeration	360
5.2 Performance Definitions	361
5.2.1 Factors Affecting Performance	364
5.2.1.1 Evaporating Temperature	364
5.2.1.2 Condenser Temperature	365
5.2.1.3 Compressor Isentropic Efficiency	367
5.2.1.4 Auxiliary Power	367
5.2.1.5 Cooling Loads	368
5.2.1.6 Part-Load Operation	368
5.3 Performance Analysis	371
5.4 Performance Improvement Opportunities	373
5.4.1 Maintenance	373
5.4.2 Control System	374
5.4.3 Operational Procedures	376
5.5 Performance Monitoring	376
5.5.1 Values to be Monitored	376
5.5.2 Software 11: Refrigeration Systems Analysis (Vapor-Compression Cycles)	377
5.5.3 Software 10: Cooling Towers Calculation	379
5.6 Example: Improvement of Chilled Water System Operation	381
5.6.1 Basic Data on Chilled Water System	381
5.6.2 As Built Scheme of Chilled Water System	382
5.6.3 Data Collection, Measurement and Analysis	382
5.6.4 Performance Improvement Measures (PIM)	390
5.6.5 Cost Benefit Analysis	392
5.7 Bibliography	393

6 Industrial Cogeneration	395
6.1 System Description	395
6.2 Principles of Operation	397
6.3 Types of Industrial Cogeneration Plants	398
6.3.1 Advantages and Disadvantages of Each System	401
6.3.2 Thermally-Activated Technologies	401
6.4 Operational Modes of Cogeneration Systems	405
6.5 Performance Definition	406
6.6 Factors Influencing Performance	407
6.6.1 Load of Cogeneration Plant	408
6.6.2 Load Duration Curve	409
6.7 Economic Aspects of Cogeneration as a Performance Improvement Measure	411
6.7.1 Capital Cost	411
6.7.2 Operating and Maintenance Costs	412
6.7.3 Overall Economics of Cogeneration Projects	413
6.8 Performance Assessment	415
6.9 Performance Monitoring and Improvement	415
6.10 Environmental Impacts	415
6.11 Case Study: Drying Kiln (Gas Turbine Operation Philosophy Improvement)	417
6.11.1 Facts	418
6.11.2 Description of Kiln	419
6.11.3 Objectives of Analysis	420
6.11.4 Measurement, Technical Calculation and Analysis	421
6.11.5 Energy Performance Improvements	424
6.11.6 Environmental Impact	426
6.12 Bibliography	426
Part III: Toolbox – Fundamentals for Analysis and Calculation of Energy and Environmental Performance	429
Index	431
