

INTRODUCTION TO CONTROL ENGINEERING

Jingxin DONG

Changde ZHAO

Shenshu XIONG

Meifeng GUO

Contents

1

Introduction 1

- 1.1 Review of Control Theory in Engineering 1
- 1.2 Basic Concepts in Automatic Control Systems 3
- 1.3 Application of Control Theory in Mechanical Manufacturing 10
- 1.4 Course Description 15
- Summary 16
- Examples and Exercises 17

2

Dynamic Mathematical Models of Physical Systems 21

- 2.1 Mathematical Models of Basic Links 21
- 2.2 Linearization of Mathematical Models 26
- 2.3 Laplace Transforms 29
- 2.4 Inverse Laplace Transforms 39
- 2.5 Transfer Functions of Typical Links 46
- 2.6 System Function Block Diagrams and their Component Parts 56
- 2.7 Signal Flow Graphs and Mason's Formula 61
- 2.8 Mathematical Models of Controlled Objects 64
- 2.9 Drawing Block Diagrams of Real Physical Systems 67
- 2.10 Basic Concepts of State-Space Equations 79
- Summary 84
- Examples and Exercises 84

3

Transient Response Analysis in the Time-Domain 99

- 3.1 Time-Domain Response and Typical Input Signals 99
- 3.2 Transient Response of First-Order Systems 103
- 3.3 Transient Response of Second-Order Systems 107
- 3.4 Performance Indices of Time-Domain Analysis 117
- 3.5 Time-Domain Transient Response of High-Order Systems 124

3.6 Measuring Time-Domain Transient Response of Electromechanical Systems 128

Summary 132

Examples and Exercises 132

4 Frequency Response Analysis 145

4.1 Frequency Characteristics of Electromechanical Systems 145

4.2 Polar Plots 155

4.3 Logarithmic Plots 163

4.4 Determining the Transfer Function of a System using the Frequency Characteristic Curves 173

4.5 Determining the Frequency Characteristic of a System using Unit Impulse Response 178

4.6 Log Magnitude-Phase Plot 179

4.7 Closed-Loop Frequency Responses of Control Systems 181

4.8 Dynamic Stiffnesses of Mechanical Systems 190

Summary 193

Examples and Exercises 193

5 Control System Stability Analysis 203

5.1 The Basic Concept of System Stability 203

5.2 Necessary and Sufficient Conditions for System Stability 204

5.3 Algebraic Stability Criteria 206

5.4 Nyquist Stability Criterion 216

5.5 Determining the Stability of Time Delay Systems 230

5.6 Determining System Stability using Bode Diagrams 237

5.7 Relative Stability of Control Systems 242

5.8 Lyapunov Stability Criterion 247

Summary 249

Examples and Exercises 249

6 Control System Error Analysis and Calculation 259

6.1 Concept of the Steady-State Error 259

6.2 Steady-State Errors caused by the Inputs 261

6.3 Steady-State Errors caused by Disturbances 268

6.4 Approaches to Reducing System Error 270

6.5 Dynamic Error Coefficients 273

Summary 275

Examples and Exercises 275

7 Control System Synthesis and Compensation 283

- 7.1 System Performance Indices 283
- 7.2 System Compensation Overview 288
- 7.3 Series Compensation 289
- 7.4 PID Compensator 295
- 7.5 Feedback Compensation 303
- 7.6 Desired Logarithmic Frequency Characteristics of Typical Systems 307
- 7.7 A DC Motor Speed Regulation System 324
- 7.8 A Voltage-Position Servo System 335
- 7.9 Other Methods for Finding the PID Parameters 339
- Summary 347
- Examples and Exercises 347

8 Computer Control Systems 357

- 8.1 Structure of Computer Control System 357
- 8.2 Mathematical Descriptions of Linear Discrete Systems 365
- 8.3 z Transforms 371
- 8.4 Impulse Transfer Functions 389
- 8.5 Discrete State-Space Models 400
- 8.6 Stability Analysis of Linear Discrete Systems 405
- 8.7 Analog Design Method for Computer Control Systems 411
- 8.8 Error Characteristics Analysis of Discrete Systems 412
- 8.9 Approximate Design Methods for Digital Compensation Links 415
- 8.10 Digital PID Controller 419
- Summary 423
- Examples and Exercises 423

9 The Application of MATLAB in Control System Analysis and Compensation 433

- 9.1 Basic Characteristics of MATLAB 433
- 9.2 Control System Description in MATLAB 436
- 9.3 Partial Fraction Expansion 436
- 9.4 Time-Domain Response Analysis of Linear Systems 438
- 9.5 Frequency-Domain Response Analysis of Control Systems 443
- 9.6 Root Locus Plots of Control Systems 447
- 9.7 System Stability Analysis 448
- 9.8 Examples of Control System Simulation 450
- 9.9 System Block Diagram Input and Simulation Tool SIMULINK 451
- Summary 459
- Exercises 460

Appendix A	Table of Laplace Transforms	463
Appendix B	Proof of the Optimal Frequency Ratio for the High-Order Optimum Model	467
