

Animal Nutrition Science

Gordon McL. Dryden

Contents

Preface	vii
Acknowledgements	xi
1. Nutritional Ecology	1
2. The Nutritive Value of Animal Foods: Introductory Concepts About Foods, Nutrients and Food Analysis	16
3. Methods of Evaluating the Availability of Nutrients in Foods	28
4. Physico-chemical Composition and Digestibility of Forages and Cereal Grains	40
5. The Nutritive Value of Concentrate Foods	57
6. Secondary Substances in Concentrates and Roughages	74
7. Digestion and the Supply of Nutrients	85
8. Water Use and Requirements	115
9. Minerals: Their Functions and Animal Requirements	130
10. Vitamins	151
11. Voluntary Food Intake	162
12. Quantitative Nutrition: Requirements for Energy and Protein	180
13. Ration Formulation	218
14. Nutritional Investigations: Measures of Nutritional Status	226
15. Nutrition and the Environment	241
16. Nutritional Genomics	248
17. Animal Responses to Stock Food Processing	256
18. Feed Mill Design and Management: an Introduction	273
Index	293
