

Fluid Film Lubrication

THEORY & DESIGN

ANDRAS Z. SZERI

Table of Contents

	<i>Page xi</i>
<i>Preface</i>	
1 Introduction	1
1.1 Historical Background	1
1.2 Tribological Surfaces	2
1.3 Friction	8
Laws of Friction	9
Asperity Contact	13
Adhesion Theory of Friction	16
Junction Growth	18
Ploughing	19
Friction of Metals	20
Friction of Polymers	21
Friction of Ceramics	21
Thermal Effects of Friction	22
1.4 Wear	22
Sliding Wear	22
Abrasive Wear	29
1.5 Effect of Lubrication	30
Thick-film Lubrication	31
Mixed Lubrication	31
Boundary Lubrication	31
Solid Lubrication	32
1.6 Fluid Film Bearings	33
Hydrostatic Bearings	34
Hydrodynamic Bearings	36
Elastohydrodynamic Lubrication	38
1.7 Bearing Selection	38
Rubbing Bearings	39
Rolling-Element Bearings	39
Fluid Film Bearings	39
1.8 Nomenclature	50
1.9 References	50
2 Basic Equations	53
2.1 Fluid Mechanics	53
Kinematics	54
Stress	57
Constitutive Equations	60
Cauchy's Equations of Motion	68

	Navier-Stokes Equations	69
	Equation of Continuity	70
2.2	Lubrication Approximation	71
	The Reynolds Equation	73
2.3	Nomenclature	79
2.4	References	80
3	Thick-Film Lubrication	81
3.1	Externally Pressurized Bearings	81
	Pad Characteristics	82
	Optimization	84
	Operation with Flow Restrictors	87
3.2	Hydrodynamic Bearings	88
	Journal Bearings	89
	Thrust Bearings	119
3.3	Nomenclature	127
3.4	References	128
4	Dynamic Properties of Lubricant Films	132
4.1	Fixed Pad	134
	Linearized Force Coefficients	134
	Analytical Solutions	138
	Coordinate Transformations	140
4.2	Stability of a Flexible Rotor	141
4.3	Pivoted-Pad Journal Bearings	144
	Pad Assembly Method	147
	Pad Perturbation Method	156
4.4	Pivoted-Pad Thrust Bearing	158
4.5	Nomenclature	166
4.6	References	168
5	Effects of Fluid Inertia	169
5.1	Temporal Inertia Limit, $Re^* \rightarrow 0, \Omega^* \geq 1$	170
5.2	Convective Inertia Limit, $\Omega^* \rightarrow 0, Re^* \geq 1$	170
	Journal Bearings	171
	Hydrostatic Bearings	185
5.3	Total Inertia limit, $\Omega^*/Re^* \rightarrow 1, Re \geq 1$	190
	The Method of Small Perturbations	190
	Squeeze Flow Between Parallel Plates	194
	The Method of Averaged Inertia	198
5.4	Nomenclature	206
5.5	References	207
6	Flow Stability and Transition	208
6.1	Stability	209
	Stability Criteria	209
	Stability Analysis	211
	Energy Stability	211

Linear Stability	213
Bifurcation Analysis	214
6.2 Flow between Concentric Cylinders	215
6.3 Flow between Eccentric Cylinders	218
Critical Reynolds Number	221
Torque Measurements	227
6.4 Rotating Disk Flows	229
Linear Stability Analysis	230
6.5 Nomenclature	234
6.6 References	235
7 Turbulence	239
7.1 Equations of Turbulent Motion	239
7.2 Turbulence Models	245
7.3 Constantinescu's Model	250
7.4 Ng-Pan-Elrod Model	255
7.5 Bulk Flow Model of Hirs	259
7.6 Nomenclature	263
7.7 References	265
8 Elastohydrodynamic Lubrication	267
8.1 Rigid Cylinder Rolling on a Plane	267
8.2 Elastohydrodynamic Theory	270
8.3 Contact Mechanics	277
8.4 Nondimensional Groups	281
Lubrication Regimes	282
Film-thickness Design Formulas	285
8.5 Analysis of the EHL Problem	286
Elastic Deformation	286
Formulation of the Line Contact Problem	289
Numerical Considerations	291
8.6 Rolling-Contact Bearings	295
Bearing Types	296
Rolling Friction	300
Frictional Losses in Rolling Contact Bearings	301
Specific Dynamic Capacity and Life	302
Specific Static Capacity	305
Fatigue Wear Out	305
8.7 Minimum Film Thickness Calculations	305
Nominal Line Contact	305
Nominal Point Contact	307
8.8 Nomenclature	310
8.9 References	310
9 Thermal Effects	314
9.1 Effective Viscosity	314
9.2 Thermohydrodynamic Theory	320
The Energy Equation	320
The Pressure Equation	328

9.3	Journal Bearings	331
	Bearing Temperature	331
	The Role of Nondimensional Parameters	332
	Friction Factor	335
	Journal Locus and Dynamic Coefficients	335
	Thermal Deformation	337
9.4	Thrust Bearings	340
	The Pressure Equation	340
	The Energy Equation	343
	The Heat Conduction Equation	344
	Pad Deformation	345
9.5	Nomenclature	348
9.6	References	349
10	Lubrication with Non-Newtonian Fluids	352
10.1	Hydrodynamic Lubrication	353
	Summary of Previous Work	353
	Lubrication with Power Law Fluid	354
	Fluids of the Differential Type	356
	Lubrication with a Third Grade Fluid	359
10.2	Elastohydrodynamic Lubrication	365
	Constitutive models	366
	A Generalized non-Newtonian Reynolds Equation for EHL	369
10.3	Lubrication with Emulsions	374
	Fundamentals of Mixture Theory	375
	Constitutive Model	377
	Lubrication Approximation	379
	Applications	380
10.4	Nomenclature	386
10.5	References	387
11	Gas Lubrication	392
11.1	Reynolds Equation for Gas Lubricant	394
11.2	Self Acting Gas Bearings	397
	Journal Bearings	398
	Infinitely Long Step Slider	402
11.3	Nomenclature	406
11.4	References	406
	<i>Index</i>	409
