

SYSTEMS SCIENCE AND MODELING FOR ECOLOGICAL ECONOMICS

ALEXEY VOINOV

Contents

<i>Preface</i>	<i>ix</i>
<i>Acknowledgements</i>	<i>xv</i>
1 Models and Systems	1
1.1 Model	1
1.2 System	6
1.3 Hierarchy	12
1.4 The modeling process	16
1.5 Model classifications	21
1.6 Systems thinking	25
2 The Art of Modeling	29
2.1 Conceptual model	30
2.2 Modeling software	49
2.3 Model formalization	70
3 Essential Math	79
3.1 Time	81
3.2 Space	99
3.3 Structure	105
3.4 Building blocks	108
4 Model Analysis	111
4.1 Sensitivity analysis	112
4.2 Model calibration	115
4.3 Model testing	129
4.4 Conclusions	134
5 Simple Model, Complex Behavior	139
5.1 Classic predator–prey model	140
5.2 Modifications of the classic model	146
5.3 Trophic chains	150
5.4 Spatial model of a predator–prey system	162
5.5 Conclusions	194

6	Water	197
6.1	Modeling as a hydrology primer	198
6.2	Unit model	223
6.3	Spatial model	229
6.4	Conclusions	244
7	Adding Socio-Economics	249
7.1	Demographics	250
7.2	Dynamics on the market	264
7.3	Corporate rule	272
7.4	Sustainability	278
7.5	The end of cheap oil	287
7.6	The World	296
8	Optimization	307
8.1	Introduction	307
8.2	Resource management	315
8.3	Fishpond	324
8.4	Landscape optimization	338
8.5	Optimality principles	347
9	The Practice of Modeling	355
9.1	Why models don't work	355
9.2	Participatory and adaptive modeling	362
9.3	Open-source, web technologies and decision support	382
9.4	Conclusions	395

To Conclude	401
Index	407
