CONTENTS

Foreword xvii

Preface xxi

Acknowledgments xxv

1. Electromagnetic Wave Propagation 1

1.1 Properties of Plane Electromagnetic Wave 1
- 1.1.1 Equation of Wave or Propagation 1
- 1.1.2 Wave Velocity 3
- 1.1.3 Power Flux Density 4
- 1.1.4 Field Created in Free Space by Isotropic Radiator 5
- 1.1.5 Wave Polarization 5

1.2 Radiant Continuous Aperture 9
- 1.2.1 Expression of Directivity and Gain 9
- 1.2.2 Radiation Pattern 12
- 1.2.3 Near Field and Far Field 15
- 1.2.4 Effective Aperture 17
- 1.2.5 Skin Effect 17

1.3 General Characteristics of Antennas 18
- 1.3.1 Expression of Gain and Beamwidth 18
- 1.3.2 Reference Radiation Patterns 20
- 1.3.3 Characteristics of Polarization 23

1.4 Free-Space Loss and Electromagnetic Field Strength 25
- 1.4.1 Attenuation of Propagation 25
- 1.4.2 Electromagnetic Field Strength 26

1.5 Reflector and Passive Repeater 28
- 1.5.1 Reflector in Far Field 28
- 1.5.2 Passive Repeater in Far Field 33
- 1.5.3 Reflector in Near Field (Periscope) 35

1.6 Model of Propagation 37
- 1.6.1 Spherical Diffraction 37
- 1.6.2 Fresnel's Ellipsoid 38

1.7 Reflection and Refraction 39
- 1.7.1 General Laws 39

1.7.2 Divergence Factor 42
1.7.3 Roughness Factor 45
1.7.4 Factor of Limitation of Reflection Zone 45
1.8 Influence of Atmosphere 47
1.8.1 Refractivity 47
1.8.2 Vertical Gradient of Refractive Index 47
1.8.3 Curvature of Radioelectric Rays 59
1.8.4 Effective Earth Radius 60
1.8.5 Variation of Launch and Arrival Angles of Rays 63
1.8.6 Positive Minimal Value of Effective Earth-radius Factor 65
1.8.7 Tropospheric Radio Ducts 67
1.8.7.1 Conditions of Appearance 67
1.8.7.2 Trajectories of Rays in Radio Duct 69
1.9 Propagation by Diffraction 70
1.9.1 Diffraction over Smooth Spherical Earth 72
1.9.2 Diffraction over Single-Knife-Edge Obstacle 76
1.9.3 Diffraction over Single Rounded Obstacle 77
1.9.4 Diffraction over Double Isolated Edges 78
1.9.5 Diffraction Loss General Curves 80
1.9.6 Attenuation by Vegetation 81
1.10 Attenuation by Atmospheric Gases 81
1.10.1 Specific Attenuation 82
1.10.2 Terrestrial Paths 83
1.10.3 Slant Paths 84
1.10.3.1 Elevation Angle Greater Than 10° 85
1.10.3.2 Elevation Angle between 0° and 10° 85
1.11 Attenuation and Depolarization by Hydrometeors 85
1.11.1 Rain Attenuation 87
1.11.1.1 Terrestrial Paths 90
1.11.1.2 Earth–Space Paths 91
1.11.1.3 Site Diversity (Rayleigh's Equations for Correlation between Random Variables) 94
1.11.1.4 Attenuation Due to Gases, Clouds, and Fog 99
1.11.2 Depolarization by Hydrometeors 99
1.11.2.1 Polarization of Electromagnetic Wave 99
1.11.2.2 Cross-Polarization Effects 100
1.12 Influence of Ionosphere 103
1.12.1 Scintillation 104
1.12.2 Faraday's Rotation 105
1.12.3 Propagation Time Delay 106

1.13 Thermal Radiation 106
1.13.1 Origin of Thermal Radiation 106
1.13.2 Propagation of Thermal Radiation 107
1.13.3 BlackBody 108
1.13.4 Gray Body 110
1.14 Probability Distributions 112
1.14.1 Introduction 112
1.14.2 Gauss's Law of Distribution 112
1.14.3 Rayleigh's Law of Distribution 114
1.14.4 Other Laws of Distribution 116

2. Principles of Digital Communication Systems 119

2.1 Signal Processing 119
2.1.1 Digital Multiplexing 120
2.1.1.1 Pulse Code Modulation 120
2.1.1.2 Line Codes 120
2.1.1.3 High-Order Digital Multiplexing 122
2.1.2 Digital Modulation 123
2.1.2.1 Usual Modulation Types 123
2.1.2.2 Bandwidth Efficiency 125
2.1.2.3 Power Spectral Density and Transmitted Spectrum 125
2.2 Thermal Noise 128
2.2.1 Origin of the Thermal Noise 128
2.2.2 Thermal Noise Voltage 128
2.2.3 Analogy between Thermal Radiation and Thermal Noise 129
2.2.4 Apparent Noise Temperature 131
2.2.5 Noise Figure 131
2.2.6 Equivalent Noise Temperature 133
2.2.7 Radiated Noise 135
2.2.8 External Noise 136
2.2.8.1 Effect of External Noise 136
2.2.8.2 Sources of Noise Temperature 138
2.3 Digital Communication Systems Design 140
2.3.1 Noise in Digital Communication Systems 140
2.3.1.1 Gaussian Random Noise 141
2.3.1.2 Additive White Gaussian Noise 141
2.3.1.3 Detection of Binary Signals in Presence of AWGN 141
2.3.1.4 Error Probability of Binary Detection 142
2.3.1.5 Signal-to-Noise Ratio 143

2.3.1.6 Error Probability of Binary Signal 144
2.3.1.7 Error Probability for Modulated Signal 144
2.3.1.8 General Characteristics of Signal 146
2.3.1.9 Choice of Modulation 148
2.3.1.10 Coding for Error Detection and Correction 148
2.3.2 Other Electrical Sources of Corruption 152
2.3.2.1 Intermodulation 152
2.3.3 Interference 160
2.3.3.1 Effect Due to Jamming 160
2.3.3.2 Calculation of Level of Jamming 164
2.3.4 Effects of Reflection 166
2.3.4.1 Reflection on Ground 166
2.3.4.2 Multiple Reflections 174
2.3.4.3 Standing Wave 176
2.3.5 Jitter, Wander, Phase Transients and Network Synchronization 180
2.3.5.1 Jitter 181
2.3.5.2 Wander 181
2.3.5.3 Phase Transients 181
2.3.5.4 Network Synchronization Engineering 181

3. Microwave Line-of-Sight Systems 183

3.1 Engineering of Line-of-Sight Systems 183
3.1.1 Introduction 183
3.1.2 Establishment of Radio Link Path Profile 183
3.1.2.1 Determination of Azimuth and Distance 184
3.1.2.2 Data Necessary for Establishment of Path Profile 185
3.2 Design of Line-of-Sight Microwave Radio Link: Interferometric Method 186
3.2.1 Layout of Path Profile 186
3.2.2 Clearance Criteria 187
3.2.3 Regression Line and Terrain Roughness 188
3.2.4 Reflection Zone 189
3.2.5 Differential Time Delay 189
3.2.6 Differential Attenuation 189
3.2.7 Reception in Space and/or Frequency Diversity 189
3.2.8 Example of Line-of-Sight Radio Link 191
3.2.9 Recordings in Ducting Conditions and Reflection on Sea 201
3.2.9.1 Case of Terrestrial Link in Desert Climate 201

3.2.9.2 Case of Long-Haul Link over Sea in Temperate Climate 208
3.2.10 Antenna Discrimination 212
3.2.11 Pointing of Antennas 214
3.2.11.1 Centering of Source of Illumination 214
3.2.11.2 Prepointing in Azimuth 214
3.2.11.3 Final Pointing 215
3.2.11.4 Effect of Misalignment 217
3.2.11.5 Behavior in Extreme Climatic Conditions 218
3.3 Link Budget 218
3.3.1 Introduction 218
3.3.2 Objectives of Performance 219
3.3.2.1 Recommendations ITU-T G.821 and Associated ITU-R 219
3.3.2.2 Recommendations ITU-T G.826 and ITU-T G.827 222
3.3.2.3 Recommendation ITU-T G.828 226
3.3.3 Transmission Link Budget 227
3.3.3.1 Median Received Power and Thermal Noise Margin 227
3.3.3.2 Receiver Thermal Threshold 228
3.4 Methods of Prediction 229
3.4.1 Recommendation ITU-R P.530-8 229
3.4.1.1 Geoclimatic Factor 230
3.4.1.2 Path Inclination and Elevation Angle 231
3.4.1.3 Percentage of Time of Fade Depth 232
3.4.1.4 Method for Various Percentages of Time 232
3.4.1.5 Prediction of Nonselective and Selective Outages 233
3.4.1.6 Prediction Method for Enhancement 234
3.4.1.7 Conversion from Average Worst Month to Average Annual Distributions 235
3.4.1.8 Prediction of Outage in Unprotected Digital Systems 237
3.4.1.9 Prediction of Outage in Digital Systems Using Diversity Techniques 242
3.4.1.10 Prediction of Total Outage Probability 253
3.4.2 Effect Due to Obstacle 257
3.4.3 Example of Link Budget 260
3.4.4 Evolution of Method of Prediction (ITU-R P.530-9 to P.530-12) 260
3.4.4.1 Multipath Occurrence Factor 260

3.4.4.2 Conversion from Average Worst Month to Shorter Worst Periods of Time 267
3.4.4.3 Occurrence of Simultaneous Fading on Multihop Links 267
3.4.4.4 Optimum Choice of Antenna Heights 267
3.5 Protection against Jamming 269
3.5.1 Calculation of Jamming Level 269
3.5.1.1 Factor of Reduction of Interference by Antennas in Far Field 270
3.5.1.2 Factor of Reduction of Interference by Antennas in Near Field 271
3.5.2 Measurement of Jamming Level and Consecutive Degraded Threshold 272
3.6 *Frequency Reuse Techniques* 273
3.6.1 "Back-to-Back" Process 273
3.6.2 "Front-to-Front" Process 274
3.6.3 XPD Model and Measurement 275
3.6.3.1 Test Link Characteristics 275
3.6.3.2 Interpretation of Recordings 277
3.6.3.3 Proposed Model When Using the Interferometric Method 278
3.7 Comparison between Various Diversity Techniques 279
3.8 Availability of Microwave Line-of-Sight Systems 282
3.8.1 Introduction 283
3.8.1.1 Availability Due to Propagation 283
3.8.1.2 Availability Due to Equipment 283
3.8.2 Availability of Microwave Terminal 283
3.8.3 Operational Availability of Microwave Radio Link 286
3.8.3.1 Operational Availability Related to Equipment 286
3.8.3.2 Operational Availability Related to Propagation 289

4. Microwave Transhorizon Systems 291

4.1 Engineering of Transhorizon Systems 291
4.1.1 Introduction 291
4.1.2 Establishment of Path Profile of Troposcatter Link 292
4.2 Method of Prediction 293
4.2.1 Long-Term Median Basic Transmission Loss Due to Forward Scatter 294
4.2.1.1 Effective Antenna Heights 294
4.2.1.2 Effective Distance 295

4.2.1.3 Angular Distance and Elevation Angles to Radio Horizon Points 295
4.2.1.4 Attenuation Function 298
4.2.1.5 Long-Term Median Attenuation Due to Atmospheric Absorption 300
4.2.1.6 Frequency Gain Function 300
4.2.1.7 Scattering Efficiency Correction 303
4.2.2 Median Long-Term Transmission Loss Variation 303
4.2.2.1 Median Long-Term Transmission Loss 304
4.2.2.2 Transmission Loss Not Exceeded for p% of Time 307
4.2.2.3 Estimation of Prediction Error 311
4.2.2.4 Service Probability 318
4.3 Link Budget 321
4.3.1 Multipath Coupling Loss 322
4.3.2 Influence of Transverse Directivity 323
4.3.2.1 Manual Process for Pointing Antennas 329
4.3.2.2 Automatic Process for Pointing Antennas 331
4.3.3 Fast Fading Speed 334
4.3.4 Reception in Diversity 334
4.3.4.1 Space Diversity 336
4.3.4.2 Frequency Diversity 337
4.3.4.3 Quadruple Space and Frequency Diversity 337
4.3.4.4 Angle Diversity 337
4.3.4.5 Polarization Diversity 339
4.3.5 Link Availability 339
4.3.6 Coherence Bandwidth of Troposcatter Channel 340
4.3.6.1 Model of Sunde 341
4.3.6.2 Model of Rice 342
4.3.6.3 Model of Collin 342
4.3.7 Combination of Diffraction and Troposcatter Transmission Losses 343
4.3.8 Influence of Reflection on Ground 344
4.3.9 Conversion of Annual Statistics to Worst-Month Statistics 346
4.4 Examples of Transhorizon Links 346
4.4.1 Knife-Edge Diffraction Path 346
4.4.2 Rounded-Edge Diffraction Path 350
4.4.3 Double-Diffraction Path 352
4.4.4 Troposcatter Link on Smooth Spherical Earth 355
4.4.5 Combined Troposcatter and Diffraction Link 358
4.4.6 Angle and Frequency Diversity Troposcatter Link 364

4.4.7 Digital Adaptive Modem 371
4.5 Other Models of Prediction 372
4.5.1 Method I of ITU-R 373
4.5.2 Method II of ITU-R 375
4.5.3 Method III of ITU-R 378
4.5.4 Seasonal and Diurnal Variations in Transmission Loss 383
4.6 Total Availability of Troposcatter Links 383
4.6.1 Physical Principles of Propagation in Troposcatter Mode 384
4.6.2 Model of Calculation of Operational Availability 385

5. Satellite Communications 391

5.1 Space Geometry of Satellite System 391
5.1.1 Introduction 391
5.1.2 General Characteristics of Orbits 391
5.1.2.1 Kepler's Laws 391
5.1.2.2 Newton's Law 392
5.1.2.3 Determination of Orbits 392
5.1.2.4 Origins of Disturbances of Orbits 393
5.1.3 Types of Satellite Systems 393
5.1.3.1 Geometry of Low and Medium Circular Orbits 394
5.1.3.2 Geometry of Connection Using Geostationary Satellite 396
5.2 Configuration of Satellite Communication System 402
5.2.1 General Characteritics of Repeater 402
5.2.1.1 Zones of Coverage 403
5.2.1.2 Frequency Bandwidth 403
5.2.1.3 Figure of Merit 404
5.2.1.4 Power Amplifier 404
5.2.1.5 Power Flux Density at Saturation 405
5.2.1.6 EIRP at Saturation 405
5.2.1.7 Effective Input Noise Temperature of Repeater 405
5.2.2 General Characteristics of Earth Station 405
5.2.2.1 Sources of Noise of Reception System 406
5.2.2.2 Noise Temperature of Receiving Antenna 406
5.2.2.3 Total Noise Temperature of Reception System 408
5.3 Link Budget 408
5.3.1 Downlink Path 408

5.3.2 Resource Allocation by Repeater 409
5.3.3 Uplink Path 410
5.3.4 Total Carrier-to-Noise Ratio 411
5.3.5 Power Spectral Density of Repeater 412
5.3.6 Occupancy Ratio of Repeater by Carrier 412
5.3.7 Optimum Size for Receiving Antenna 412
5.3.8 General Characteristics of Signal 413
5.3.9 Performance Objectives of Connection 413
5.3.10 Multiple-Access Techniques 414
5.3.10.1 Frequency-Division Multiple Access 414
5.3.10.2 Time-Division Multiple Access 414
5.3.10.3 Code-Division Multiple Access 415
5.3.11 Doppler–Fizeau Effect 416
5.4 Method of Prediction 418
5.4.1 Earth–Space Propagation 418
5.4.1.1 Atmospheric Attenuation 418
5.4.1.2 Effects Due to Hydrometeors 419
5.4.1.3 Antenna Gain Loss 419
5.4.1.4 Effects Due to Tropospheric Scintillation and Multipath 419
5.4.1.5 Effects Due to Ionosphere 420
5.4.1.6 External Noise Sources 420
5.4.2 Prediction of Total Outage Probability 424
5.4.3 Example of Link Budget 424
