

A WORKING GUIDE TO PROCESS EQUIPMENT

Third Edition

NORMAN P. LIEBERMAN AND
ELIZABETH T. LIEBERMAN

Contents

Foreword	xvii
Preface to Third Edition	xix
Preface to Second Edition	xxi
Preface to First Edition	xxiii
Introduction	xxv
Acknowledgments	xxix
1 Process Equipment Fundamentals	1
1.1 Frictional Losses	3
1.2 Density Difference Induces Flow	3
1.3 Natural Thermosyphon Circulation	3
1.4 Reducing Hydrocarbon Partial Pressure ...	4
1.5 Corrosion at Home	5
1.6 What I Know	6
1.7 Distillation: The First Application	8
1.8 Origin of Reflux	12
2 Basic Terms and Conditions	13
3 How Trays Work: Flooding	23
<i>Downcomer Backup</i>	
3.1 Tray Efficiency	23
3.2 Downcomer Backup	25
3.3 Downcomer Clearance	26
3.4 Vapor-Flow Pressure Drop	29
3.5 Jet Flood	31
3.6 Incipient Flood	32
3.7 Tower Pressure Drop and Flooding	34
4 How Trays Work: Dumping	37
<i>Weeping through Tray Decks</i>	
4.1 Tray Pressure Drop	38
4.2 Other Causes of Tray Inefficiency	41
4.3 Bubble-Cap Trays	43
4.4 New High Capacity Trays	45
5 Why Control Tower Pressure	47
<i>Options for Optimizing Tower Operating Pressure</i>	
5.1 Selecting an Optimum Tower Pressure	48
5.2 Raising the Tower Pressure Target	49

5.3	Lowering the Tower Pressure	50
5.4	The Phase Rule in Distillation	54
6	What Drives Distillation Towers	57
	<i>Reboiler Function</i>	
6.1	The Reboiler	57
6.2	Heat-Balance Calculations	59
7	How Reboilers Work	67
	<i>Thermosyphon, Gravity Feed, and Forced</i>	
7.1	Thermosyphon Reboilers	68
7.2	Forced-Circulation Reboilers	74
7.3	Kettle Reboilers	75
7.4	Don't Forget Fouling	77
8	Inspecting Tower Internals	79
8.1	Tray Deck Levelness	79
8.2	Loss of Downcomer Seal Due to Leaks	80
8.3	Effect of Missing Caps	81
8.4	Repairing Loose Tray Panels	81
8.5	Improper Downcomer Clearance	81
8.6	Inlet Weirs	82
8.7	Seal Pans	82
8.8	Drain Holes	83
8.9	Vortex Breakers	84
8.10	Chimney Tray Leakage	84
8.11	Shear Clips	84
8.12	Bubble-Cap Trays	85
8.13	Final Inspection	86
8.14	Conclusion	86
9	How Instruments Work	89
	<i>Levels, Pressures, Flows, and Temperatures</i>	
9.1	Level	89
9.2	Foam Affects Levels	94
9.3	Pressure	97
9.4	Flow	98
9.5	Temperature	101
10	Packed Towers: Better than Trays?	105
	<i>Packed-Bed Vapor and Liquid Distribution</i>	
10.1	How Packed Towers Work	105
10.2	Maintaining Functional and Structural Efficiency in Packed Towers	111
10.3	Advantages of Packing vs. Trays	117

11	Steam and Condensate Systems	119
	<i>Water Hammer and Condensate Backup Steam-Side Reboiler Control</i>	
	11.1 Steam Reboilers	119
	11.2 Condensing Heat-Transfer Rates	121
	11.3 Maintaining System Efficiency	124
	11.4 Carbonic Acid Corrosion	127
	11.5 Condensate Collection Systems	128
	11.6 Deaerators	131
	11.7 Surface Condensers	133
12	Bubble Point and Dew Point	137
	<i>Equilibrium Concepts in Vapor-Liquid Mixtures</i>	
	12.1 Bubble Point	137
	12.2 Dew Point	141
	Reference	144
13	Steam Strippers	145
	<i>Source of Latent Heat of Vaporization</i>	
	13.1 Heat of Evaporation	145
	13.2 Stripper Efficiency	147
14	Draw-Off Nozzle Hydraulics	155
	<i>Nozzle Cavitation Due to Lack of Hydrostatic Head</i>	
	14.1 Nozzle Exit Loss	155
	14.2 Critical Flow	158
	14.3 Maintaining Nozzle Efficiency	159
	14.4 Overcoming Nozzle Exit Loss Limits	163
	Reference	165
15	Pumparounds and Tower Heat Flows	167
	<i>Closing the Tower Enthalpy Balance</i>	
	15.1 The Pumparound	167
	15.2 Vapor Flow	171
	15.3 Fractionation	175
16	Condensers and Tower Pressure Control	177
	<i>Hot-Vapor Bypass: Flooded Condenser Control</i>	
	16.1 Subcooling, Vapor Binding, and Condensation	178
	16.2 Pressure Control	184

17	Air Coolers	193
	<i>Fin-Fan Coolers</i>	
	17.1 Fin Fouling	193
	17.2 Fan Discharge Pressure	195
	17.3 Effect of Reduced Airflow	196
	17.4 Adjustments and Corrections to Improve Cooling	197
	17.5 Designing for Efficiency	198
18	Deaerators and Steam Systems	205
	<i>Generating Steam in Boilers and BFW Preparation</i>	
	18.1 Boiler Feedwater	206
	18.2 Boilers	211
	18.3 Convective Section Waste-Heat Steam Generation	215
	Reference	216
19	Vacuum Systems: Steam Jet Ejectors	217
	<i>Steam Jet Ejectors</i>	
	19.1 Theory of Operation	217
	19.2 Converging and Diverging Compression ..	219
	19.3 Calculations, Performance Curves, and Other Measurements in Jet Systems	220
	19.4 Optimum Vacuum Tower-Top Temperature	232
	19.5 Measurement of a Deep Vacuum without Mercury	233
	Reference	234
20	Steam Turbines	235
	<i>Use of Horsepower Valves and Correct Speed Control</i>	
	20.1 Principle of Operation and Calculations ...	235
	20.2 Selecting Optimum Turbine Speed	241
21	Surface Condensers	247
	<i>The Condensing Steam Turbine</i>	
	21.1 The Second Law of Thermodynamics	248
	21.2 Surface Condenser Problems	253
	21.3 Surface Condenser Heat-Transfer Coefficients	258
	Reference	258
22	Shell-and-Tube Heat Exchangers	259
	<i>Heat-Transfer Fouling Resistance</i>	
	22.1 Allowing for Thermal Expansion	259
	22.2 Heat-Transfer Efficiency	268

22.3	Exchanger Cleaning	271
22.4	Mechanical Design for Good Heat Transfer	271
22.5	Importance of Shell-Side Cross-Flow Reference	277
23	Heat Exchanger Innovations	279
23.1	Smooth High Alloy Tubes	280
23.2	Low Finned Tubes	280
23.3	Sintered Metal Tubes	280
23.4	Spiral Heat Exchanger	281
23.5	Tube Inserts	282
23.6	Twisted Tubes and Twisted Tube Bundle	285
23.7	Helical Tube Support Baffles Reference	289
24	Fired Heaters: Fire- and Flue-Gas Side <i>Draft and Afterburn; Optimizing Excess Air</i>	291
24.1	Effect of Reduced Air Flow	293
24.2	Absolute Combustion	294
24.3	Draft	303
24.4	Air Leakage	306
24.5	Efficient Air/Fuel Mixing	307
24.6	Optimizing Excess Air	308
24.7	Air Preheating, Lighting Burners, and Heat Balancing	309
25	Fired Heaters: Process Side <i>Coking Furnace Tubes and Tube Failures</i>	315
25.1	Process Duty versus Heat Liberation	315
25.2	Heater Tube Failures	321
25.3	Flow in Heater Tubes	326
25.4	Low-NO _x Burners	327
25.5	Tube Fire-Side Heaters	328
26	Refrigeration Systems <i>An Introduction to Centrifugal Compressors</i>	331
26.1	Refrigerant Receiver	333
26.2	Evaporator Temperature Control	334
26.3	Compressor and Condenser Operation	335
26.4	Refrigerant Composition	337
27	Cooling Water Systems	339
27.1	Locating Exchanger Tube Leaks	340
27.2	Tube-Side Fouling	340

27.3	Changing Tube-Side Passes	340
27.4	Cooling Tower pH Control	342
27.5	Wooden Cooling Towers	342
27.6	Back-Flushing and Air Rumbling	343
27.7	Acid Cleaning	343
27.8	Increasing Water Flow	343
27.9	Piping Pressure Losses	344
27.10	Cooling Tower Efficiency	344
27.11	Wet Bulb Temperature	346
28	Catalytic Effects: Equilibrium and Kinetics	349
28.1	Kinetics vs. Equilibrium	349
28.2	Temperature vs. Time	350
28.3	Purpose of a Catalyst	351
28.4	Lessons from Lithuania	352
28.5	Zero Order Reactions	354
28.6	Runaway Reaction	354
28.7	Common Chemical Plant and Refinery Catalytic Processes	355
29	Centrifugal Pumps: Fundamentals of Operation	357
	<i>Head, Flow, and Pressure</i>	
29.1	Head	357
29.2	Starting NPSH Requirement	361
29.3	Pressure	362
29.4	Pump Impeller	370
29.5	Effect of Temperature on Pump Capacity	372
30	Centrifugal Pumps: Driver Limits	373
	<i>Electric Motors and Steam Turbines</i>	
30.1	Electric Motors	373
30.2	Steam Turbines	378
30.3	Gears	380
31	Centrifugal Pumps: Suction Pressure Limits	381
	<i>Cavitation and Net Positive Suction Head</i>	
31.1	Cavitation and Net Positive Suction Head	381
31.2	Subatmospheric Suction Pressure	392
32	Control Valves	397
32.1	Pumps and Control Valves	399
32.2	Operating on the Bad Part of the Curve	400
32.3	Control Valve Position	401

32.4	Valve Position Dials	402
32.5	Air-to-Open Valves	403
32.6	Saving Energy in Existing Hydraulic Systems	403
32.7	Control Valve Bypasses	404
32.8	Plugged Control Valves	404
33	Separators: Vapor-Hydrocarbon-Water	407
	<i>Liquid Settling Rates</i>	
33.1	Gravity Settling	407
33.2	Demisters	410
33.3	Entrainment Due to Foam	411
33.4	Water-Hydrocarbon Separations	413
33.5	Electrically Accelerated Water Coalescing ...	415
33.6	Static Coalescers	416
34	Gas Compression: The Basic Idea	419
	<i>The Second Law of Thermodynamics Made Easy</i>	
34.1	Relationship between Heat and Work	419
34.2	Compression Work ($C_p - C_v$)	422
	Reference	424
35	Centrifugal Compressors and Surge	425
	<i>Overramping the Motor Driver</i>	
35.1	Centrifugal Compression and Surge	427
35.2	Compressor Efficiency	432
36	Reciprocating Compressors	439
	<i>The Carnot Cycle; Use of Indicator Card</i>	
36.1	Theory of Reciprocating Compressor Operation	440
36.2	The Carnot Cycle	442
36.3	The Indicator Card	443
36.4	Volumetric Compressor Efficiency	445
36.5	Unloaders	446
36.6	Rod Loading	448
36.7	Variable Molecular Weight	448
37	Compressor Efficiency	451
	<i>Effect on Driver Load</i>	
37.1	Jet Engine	452
37.2	Controlling Vibration and Temperature Rise	452
37.3	Relative Efficiency	454
37.4	Relative Work: External Pressure Losses ...	456

38	Safety Concerns	459
	<i>Relief Valves, Corrosion, and Safety Trips</i>	
38.1	Relief-Valve Plugging	460
38.2	Relieving to Atmosphere	461
38.3	Corrosion Monitoring	462
38.4	Alarms and Trips	464
38.5	Autoignition of Hydrocarbons	466
38.6	Paper Gaskets	468
38.7	Calculating Heats of Reaction	468
38.8	Hot Water Explodes Out of Manway	469
39	Corrosion—Process Units	471
39.1	Closer to Home	471
39.2	Erosive Velocities	472
39.3	Mixed Phase Flow	472
39.4	Carbonate Corrosion	473
39.5	Napthenic Acid Attack	473
39.6	A Short History of Corrosion	473
39.7	Corrosion—Fired Heaters	481
39.8	Oil-Fired Heaters	484
39.9	Finned-Tube Corrosion	484
39.10	Field Identification of Piping Metallurgy	485
40	Fluid Flow in Pipes	487
	<i>Basic Ideas to Evaluate Newtonian and Non-Newtonian Flow</i>	
40.1	Field Engineer's Method for Estimating Pipe Flow	487
40.2	Field Pressure Drop Survey	488
40.3	Line Sizing for Low-Viscosity and Turbulent Flow	491
40.4	Frictional Pressure Loss in Rough and Smooth Pipe	499
40.5	Special Case for Laminar Flow	502
40.6	Smooth Pipes and Turbulent Flow	503
40.7	Very Rough Pipes and Very Turbulent Flow ..	503
40.8	Non-Newtonian Fluids	503
40.9	Some Types of Flow Behavior	504
40.10	Viscoelastic Fluids	508
40.11	Identifying the Type of Flow Behavior	509
40.12	Apparent and Effective Viscosityof Non-newtonian Liquids	509
40.13	The Power Law or Ostwald de Waele Model	510

40.14	Generalized Reynolds Numbers	513
	References	515
41	Super-Fractionation Separation Stage	517
41.1	My First Encounter with Super-Fractionation	517
41.2	Kettle Reboiler	522
41.3	Partial Condenser	522
41.4	Side Reboilers and Intercoolers	526
42	Computer Modeling and Control	527
42.1	Modeling a Propane-Propylene Splitter ...	527
42.2	Computer Control	531
42.3	Material Balance Problems in Computer Modeling	532
43	Field Troubleshooting Process Problems	535
43.1	De-ethanizer Flooding	535
43.2	The Elements of Troubleshooting	537
43.3	Field Calculations	538
43.4	Troubleshooting Tools—Your Wrench	539
43.5	Field Measurements	540
43.6	Troubleshooting Methods	544
	Glossary	547
	Index	559
