

THIRD EDITION

HAYES'

HANDBOOK OF PESTICIDE TOXICOLOGY

VOLUME 1

EDITED BY
ROBERT KRIEGER

ASSOCIATE EDITORS

JOHN DOULL, ERNEST HODGSON, HOWARD MAIBACH,
LAWRENCE REITER, LEONARD RITTER, JOHN ROSS,
WILLIAM SLIKKER, JR., JOOP VAN HEMMEN

Contributors	xxiii
Foreword	xxix
Preface	xxxvii

Section I Pesticide Uses

1. Dose and Time Determining, and Other Factors Influencing, Toxicity	3
1.1 Introduction	3
1.1.1 Dose and Time as Fundamental Variables of Toxicity	3
1.1.2 Definition of Dose and Time	6
1.1.3 Dose and Time Relationships	6
1.1.4 Analogy to Thermodynamics	8
1.2 Kinds of Toxicity	10
1.2.1 Nature of the Injury	10
1.2.2 Duration of the Injury	10
1.3 Quantitation of Dosage-Response Relationships	12
1.3.1 ED 50 or LD 50	13
1.3.2 Measurement of Cumulative Effects	23
1.3.3 Time Relationships	27
1.3.4 Problem of Measuring Effect of Dispersed Toxicants	33
1.3.5 Measurement of Graded Responses	33
1.3.6 Dosage at the Tissue Level	33
1.3.7 Statistical Considerations	34
1.4 Dosage-Response Relationships in Different Kinds of Toxicity or Change	47
1.4.1 Toxicity (<i>Sensu Stricto</i>)	47
1.4.2 Neurotoxicity	47
1.4.3 Teratogenesis	47
1.4.4 Carcinogenesis	48
1.4.5 Mutagenesis	50
1.4.6 Hypersensitivity and Allergy	50
1.4.7 Induction of Enzymes	50
1.4.8 Metabolism and Storage	51
1.5 Factors Influencing Toxicity of any Kind	53
1.5.1 Dosage	53
1.5.2 Compound	54
1.5.3 Interaction of Compounds	56
1.5.4 Schedule of Dosage	61
1.5.5 Duration of Dosage	62
1.5.6 Route of Exposure	63
1.5.7 Species and Strain Differences	64
1.5.8 Discussion of Factors Influencing Toxicity	88

2. Pest Toxicology: The Primary Mechanisms of Pesticide Action	103
2.1 Introduction	103
2.2 Primary Targets	103
2.3 Secondary Targets	105
2.4 Common Target for Structurally Diverse Pesticides	105
2.5 Resistance as a Limiting Factor	105
2.6 Nerve	106
2.7 Photosynthesis and Pigment Synthesis	107
2.8 Biosynthesis	108
2.8.1 Herbicides	108
2.8.2 Fungicides and Insecticides	109
2.9 Respiration	111
2.10 Growth Regulators	112
2.11 Unknown, Nonspecific and Other Targets	112
2.12 Overview	113
Conclusion	116
Postscript	116
Acknowledgments	116
3. Pest Control Agents from Natural Products	119
3.1 Introduction	119
3.2 Insect Control Agents	120
3.2.1 Botanical Insecticides	120
3.2.2 Microbial Insecticides	154
3.2.3 Semiochemicals	167
3.3 Disease Control Agents	173
3.3.1 Fungicides	173
3.3.2 Bactericides	180
3.4 Herbicides	183
3.4.1 Bialaphos (Bialaphos)	183
3.4.2 Glufosinate	184
3.5 Rodenticides	188
3.5.1 Strychnine	188
3.5.2 Red Squill and Scilliroside	193
3.5.3 Ricin	196
3.5.4 <i>Salmonella</i> Bacteria	200
4. Public Health Pesticides	231
4.1 Introduction	231
4.2 Definition of Terms in Vector-Borne Diseases	231
4.3 Impact of Arthropods on Human Health	237
4.4 Integrated Pest Management and Vector Management	238

4.4.1	Noninsecticidal Methods in Vector Management	240	7.7	Frequency of Intoxication	289
4.4.2	Chemicals in Vector Management	241	7.8	Scenarios of Concern	290
	Conclusion	250	7.8.1	Acute Intoxication	290
5.	The Changing Role of Insecticides in Structural Pest Control	257	7.8.2	Chronic Intoxication	290
5.1	Introduction	257	7.8.3	Pesticide Use and Cancer in Animals	291
5.2	Pest Problems: Real or Perceived	257	7.8.4	Pesticide Use and Exposure of People in Contact with Animals	291
5.3	Environmental and Health Concerns	258	7.9	Major Pesticide Categories	292
5.4	Insecticide Applications	260	7.9.1	Cholinesterase Inhibitors: Organophosphoruses and Carbamates	292
5.4.1	Nonresidual Insecticides	260	7.9.2	Pyrethrins and Pyrethroids	292
5.4.2	Residual Insecticides	261	7.9.3	Natural Products Used for Flea Control	293
5.5	Soil Treatments for Subterranean Termites	263	7.9.4	Macrocyclic Lactones	294
5.6	Baits and Baiting	265	7.9.5	Neonicotinoids: Imidacloprid and Nitenpyram	294
5.7	Future Directions	266	7.9.6	Fipronil	295
	Conclusion	266	7.9.7	Amitraz	295
6.	Vertebrate Pest Control Chemicals and Their Use in Urban and Rural Environments	271	7.9.8	Insect Growth Regulators	295
6.1	Introduction	271	7.9.9	Synergists and Repellants	295
6.2	Vertebrate Pests: What are They?	271	7.9.10	Rodenticides	296
6.3	Management Restrictions	272	7.9.11	Metaldehyde	296
6.4	Problems Created by Vertebrates	272	7.9.12	Paraquat	296
6.5	Nonlethal Management without Pesticides	272	7.10	Diagnosis of Intoxication	296
6.6	Population Reduction without Pesticides	273	7.11	Treatment of Intoxication	297
6.7	Pesticides: Repellents Versus Lethal Agents	274		Conclusion	298
6.8	Repellents	275	8.	Pesticide Use Practices in Integrated Pest Management	303
6.9	Immobilizing Agents	277	8.1	Integrated Pest Management	304
6.10	Lethal Vertebrate Pesticides	277	8.2	What is Integrated Pest Management?	305
6.10.1	Poison Rodent Baits	277	8.3	The IPM Continuum	305
6.10.2	Fumigants	281	8.4	Pesticides	306
6.10.3	Tracking Powders	281	8.5	Field Scouting	306
6.10.4	Contraceptives	282	8.5.1	Monitoring	306
6.10.5	Glue Boards	282	8.5.2	Decision Support	307
6.10.6	Livestock Protection Collars	282	8.6	Reduced-Risk Pesticides	307
6.10.7	Toxicant Ejector Device	283	8.6.1	Behavioral Chemicals	307
6.10.8	Flock Dispersal Agent	283	8.6.2	Conventional Products and Risk	308
6.10.9	Poison Bird Bait	283	8.7	Cultural and Physical Suppression	308
	Conclusion	284	8.8	Prevention	308
7.	Pesticide Use and Associated Morbidity and Mortality in Veterinary Medicine	285	8.9	Avoidance	308
7.1	Introduction	285	8.10	Pesticides and Biological Controls	309
7.2	Formulations	286	8.11	Advisory Services	309
7.3	Species Sensitivities	286		Conclusion	311
7.4	Pesticide Use in Domestic Animals	287	9.	Properties of Soil Fumigants and Their Fate in the Environment	315
7.5	Regulation of Pesticides Used in Veterinary Medicine	287	9.1	Introduction	315
7.6	Violative Residues	289	9.2	Chemical Properties, Application, and Major Environmental Issues	317
			9.2.1	Fumigation Methods	318
			9.2.2	Environmental Concerns	319
			9.3	Processes and Factors Affecting the Fate of Fumigants in Soil	319

9.3.1	Volatilization	319
9.3.2	Degradation	320
9.3.3	Adsorption	320
9.4	Fumigant Distribution in Soil and Efficacy Assessment	321
9.5	Currently Available Soil Fumigants	322
9.5.1	Methyl Bromide	322
9.5.2	Methyl Iodide (Iodomethane)	323
9.5.3	1,3-Dichloropropene	323
9.5.4	Chloropicrin	324
9.5.5	Methyl Isothiocyanate	324
9.5.6	Dimethyl Disulfide	325
9.5.7	Sodium Tetrathiocarbonate	325
9.6	Strategies to Minimize Emissions	326
9.6.1	Application Methods	326
9.6.2	Plastic Films	326
9.6.3	Irrigation or Water Treatment	326
9.6.4	Chemical Amendment	326
9.6.5	Organic Amendment	327
9.6.6	Target Area Treatment	327
9.6.7	Mass Balance of Fumigants Applied to Soil	327
	Conclusion	327

11.	Genotoxicity of Pesticides	357
11.1	Introduction	357
11.2	Genotoxicity Tests	358
11.2.1	Bacterial Reverse Mutation Assay	360
11.2.2	<i>In Vitro</i> Mutation Assay in Mammalian Cells	361
11.2.3	<i>In Vivo</i> Cytogenetic Assay	361
11.2.4	Micronucleus Assay	362
11.3	Genotoxicity Testing of Pesticides	362
11.4	Patterns of Response	362
11.4.1	Pesticides Exhibiting Both Genotoxicity and Carcinogenicity	362
11.4.2	Pesticides Exhibiting Genotoxicity with Limited or No Evidence of Carcinogenicity	365
11.4.3	Pesticides Exhibiting Carcinogenicity without Appreciable Genotoxicity	366
11.4.4	Nongenotoxic Agents without Evidence of Carcinogenicity	367
11.4.5	Pesticides Exhibiting Mixed Results in Genotoxicity or Cancer Tests	367
11.5	Human Biomonitoring	369
11.6	Genotoxicity and Risk Assessment	373
	Conclusion	374

Section II Toxicity and Safety Evaluation

	Toxicity and Safety Evaluation of Pesticides	333
I.1	Health Hazard Evaluation—Role in the Assessment of Pesticide Risks to Humans	334
I.2	Toxicokinetic Studies	334
I.3	Acute Toxicity Studies	335
I.4	Short-Term Studies	335
I.5	Long-Term Studies	335
I.6	Reproduction Studies	335
I.7	Developmental Toxicity Studies	335
I.8	Genotoxicity/Mutagenicity Studies	335
I.9	Neurotoxicity and Developmental Neurotoxicity Studies	335
I.10	Immunotoxicity	336
I.11	Endocrine Disruptor Potential	336
I.12	Mechanism of Action	336
	Conclusion	336

10.	Risk Assessment for Acute Exposure to Pesticides	337
10.1	Introduction	337
10.2	Toxicological Data	337
10.3	Exposure Data	338
10.4	Examples	340
10.4.1	Methyl Parathion	340
10.4.2	Methyl Bromide	344
	Conclusion	349

12.	Developmental and Reproductive Toxicology of Pesticides	381
12.1	Introduction	381
12.1.1	Developmental Toxicity	382
12.1.2	Reproductive Toxicity	383
12.1.3	Epidemiology	383
12.2	Exposure	384
12.2.1	Timing of Exposure	384
12.2.2	Prenatal Reproductive Toxicants	384
12.2.3	Prepubertal Reproductive Toxicants	385
12.2.4	Adult Reproductive Toxicants	385
12.3	Mechanisms of Action	385
12.3.1	Direct-Acting	385
12.3.2	Indirect-Acting	385
12.4	Regulatory Issues	385
12.4.1	History	386
12.4.2	Principles of Testing and Evaluation	386
12.4.3	Choice of Species in Testing	388
12.4.4	Choice of Testing Doses	388
12.4.5	Interpreting Effects	388
12.4.6	Statistical Evaluation	389
12.4.7	Exposure Assessment	389
12.4.8	Impact of FQPA on Developmental and Reproductive Toxic Effects of Pesticides	390

12.5	Toxicology Studies	391	14.4.3	Mode of Action	475
12.5.1	Herbicides	391	14.4.4	Human Relevance	477
12.5.2	Insecticides	399	14.5	Application to Risk Assessment and Regulatory Decision Making	477
12.5.3	Insect Growth Regulators	414	14.5.1	Chronic Toxicity Risk Assessment – Noncancer Endpoints	478
12.5.4	Fungicides	414	14.5.2	Cancer Risk Assessment – Threshold Carcinogens	478
12.5.5	Rodenticides	421	14.5.3	Cancer Risk Assessment – Nonthreshold Carcinogens	479
12.5.6	Animal Health Products, Fumigants, and Miscellaneous Pesticides	421	14.6	Challenges	479
	Conclusion	427	14.6.1	Life Stages	479
13.	Microbial Pest Control Agents: Use Patterns, Registration Requirements, and Mammalian Toxicity	441	14.6.2	Cumulative Toxicity	480
13.1	Introduction	441		Conclusion	480
13.2	Toxicity Testing Requirements for MPCAs	445	15.	Immunotoxicity of Pesticides	483
13.2.1	Tier I	445	15.1	Introduction	483
13.2.2	Tier II	446	15.1.1	Immune System	483
13.2.3	Tier III	446	15.1.2	Pesticides	484
13.3	Toxicity of Individual MPCAs	447	15.2	Carbamates	484
13.3.1	Bacteria	447	15.2.1	Rodent Studies	485
13.3.2	Eukaryotic Pesticides (Fungi and Nonfungi (Stramenopila))	454	15.2.2	Nonrodent Studies	486
13.3.3	Viruses	456	15.2.3	Human Studies	486
	Conclusions	457	15.3	Organochlorines	486
	Acknowledgments	458	15.3.1	Rodent Studies	486
14.	The Assessment of the Chronic Toxicity and Carcinogenicity of Pesticides	463	15.3.2	Nonrodent Studies	487
14.1	Introduction	463	15.3.3	Human Studies	488
14.2	Regulatory Requirements, Test Guidelines, and Protocols	464	15.4	Organophosphates	488
14.2.1	Species and Study Duration	464	15.4.1	Rodent Studies	488
14.2.2	Route of Administration	466	15.4.2	Nonrodent Studies	489
14.2.3	Dose Levels	466	15.4.3	Human Studies	489
14.2.4	Chemical Purity	467	15.5	Phenoxy Compounds	489
14.3	Assessment of Chronic Toxicity (Noncancer) Endpoints	467	15.5.1	Rodent Studies	490
14.3.1	Mortality	468	15.5.2	Human Studies	490
14.3.2	Clinical Observations	468	15.6	Pyrethroids and Pyrethrins	490
14.3.3	Body Weight, Body Weight Gain, and Food Consumption	468	15.6.1	Rodent Studies	490
14.3.4	Ophthalmoscopic Examination	469	15.6.2	Nonrodent Studies	490
14.3.5	Clinical Pathology	469	15.6.3	Human Studies	491
14.3.6	Organ Weight	472	15.7	Triazines	491
14.3.7	Macroscopic and Microscopic Pathology	472	15.7.1	Rodent Studies	491
14.3.8	Additional Endpoints	473	15.7.2	Nonrodent Studies	491
14.3.9	Overall Assessment	473	15.7.3	Human Studies	492
14.4	Assessment of Carcinogenic Potential	474	15.8	Regulations	492
14.4.1	Overall Approach	474	15.8.1	Immunotoxic Guidelines	492
14.4.2	Statistical Considerations	475	15.8.2	Immunotoxic Testing	492
				Conclusion	493
				Acknowledgments	493
			16.	Risk Assessment for Acute, Subchronic and Chronic Exposure to Pesticides: Endosulfan	499
			16.1	Introduction	499
			16.2	Chemical Identification	500
			16.3	Environmental Fate	500
			16.4	Mechanism of Toxicity	501

16.5	Biotransformation	501	17.2	Diseases with Putative “Gene–Pesticide” Interactions	525
16.6	Pharmacokinetics	501	17.2.1	Pesticides, Genes, and Cancer Risk	525
16.7	Toxicology Profile	501	17.2.2	Pesticides, Genes, and Parkinson’s Disease	526
16.7.1	Acute Toxicity	501	17.3	Importance of Environmental Exposure Assessment in G × E Studies of Pesticides	528
16.7.2	Subchronic Toxicity	502	17.4	Specific Genes and Polymorphisms Relevant to Putative Gene–Pesticide Interactions	529
16.7.3	Chronic Toxicity and Oncogenicity	503	17.4.1	Cytochromes P450S	529
16.7.4	Genotoxicity	503	17.4.2	Paraoxonase	536
16.7.5	Reproductive Toxicity	503	17.4.3	Additional Carboxylic Esterases	538
16.7.6	Developmental Toxicity	504	17.4.4	Glutathione S-Transferase	539
16.7.7	Neurotoxicity	504	17.4.5	Additional Putative Pesticide Susceptibility Genes	540
16.8	Hazard Identification	505	Conclusions		541
16.8.1	Acute Toxicity	505	18.	Pesticides as Endocrine- Disrupting Chemicals	551
16.8.2	Subchronic Toxicity	506	18.1	Introduction	551
16.8.3	Chronic Toxicity	506	18.2	Steroid Hormones	553
16.8.4	Genotoxicity/Oncogenicity	506	18.2.1	Estrogen Receptor Function	553
16.9	Exposure Assessment	506	18.2.2	Androgen Receptor Function	554
16.9.1	Occupational	506	18.2.3	Steroidogenesis Inhibitors	555
16.9.2	Bystanders at Application Sites	510	18.2.4	Inducers of Steroid Clearance	557
16.10	Dietary Exposure	510	18.2.5	Enhancers of Steroid Action	557
16.10.1	DPR Residue Database and Exposure Analysis	510	18.3	Hypothalamic–Pituitary–Gonadal Axis	558
16.10.2	Tolerances in California	512	18.3.1	Dithiocarbamates	558
16.10.3	Residue Adjustments: Percentage of the Crop Treated	512	18.3.2	Atrazine	558
16.10.4	Highest Measured Acute Residue Values	512	18.3.3	Pyrethroids	559
16.11	Occupational and Bystander Air Aggregate Exposure	513	18.4	Thyroid Hormone	560
16.11.1	Aggregate (Dermal + Inhalation + Dietary) Exposure in Occupational Scenarios	513	18.4.1	2,4-D	560
16.12	Risk Characterization	513	18.4.2	Triclosan	561
16.12.1	MOE Calculations	514	18.5	Impact on Testing Guidelines	561
16.12.2	MOE Results	514	18.5.1	Multigenerational Studies	561
16.13	Issues Related to Sensitive Populations	514	18.5.2	Endocrine Disruptors Screening Program	562
16.14	Endocrine Disruption and the FQPA Safety Factor	515	Conclusion		565
16.15	Tolerance Assessment Updated by DPR for 2006	516	Acknowledgments		565
16.16	Summary	516	19.	Volatile Organic Compounds from Pesticide Application and Contribution to Tropospheric Ozone	571
16.16.1	Occupational and Bystander MOEs	516	19.1	Introduction	571
16.16.2	Dietary MOEs	516	19.2	Principal VOC Contributing Pesticides	572
Conclusion		516	19.3	CDPR Initial Method to obtain a Screening Assessment of VOC Mass Released from Each California Pesticide—Early 1990s	572

Section III Emerging Approaches in Safety Evaluation

17.	Genetic Polymorphism and Susceptibility to Pesticides	525
17.1	Introduction	525

19.3.1	Method Development	572
19.3.2	Method Validation	572
19.3.3	Corrections to TGA Results	573

[illegible]

23.3.4	Immersion Tests	649	26.	Pesticides and Contact Urticaria Syndrome	677
23.3.5	Bioengineering Approaches	649	26.1	Definition	677
23.3.6	New Approaches	650	26.2	Clinical Signs and Symptoms	677
23.4	Clinical Patterns of Irritant Contact Dermatitis	650	26.3	Etiology and Mechanisms	678
23.4.1	Acute Irritant Dermatitis (Primary Irritation)	650	26.3.1	Immunologic Contact Urticaria	678
23.4.2	Delayed, Acute Irritant Dermatitis	650	26.3.2	Nonimmunologic Contact Urticaria	678
23.4.3	Irritant Reaction	650	26.3.3	Uncertain Mechanism	678
23.4.4	Subjective/Sensory Irritation	650	26.4	Animal and Human Assays	679
23.4.5	Suberythematous Irritation	651	26.5	Diagnosis of CUS	679
23.4.6	Cumulative Irritant Dermatitis	651	26.6	CUS Induced by Pesticides Conclusion	680
23.4.7	Traumatic Irritant Dermatitis	651	27.	Agricultural Chemical Percutaneous Absorption and Decontamination	683
23.4.8	Acneiform and Pustular Irritant Dermatitis	651	27.1	Introduction	683
23.4.9	Exsiccation Eczematoid	651	27.2	Percutaneous Absorption Methodology	683
23.4.10	Friction Dermatitis	651	27.2.1	Absolute Topical Bioavailability	683
23.4.11	Airborne Irritant Dermatitis	651	27.2.2	Radioactivity in Excreta	683
23.5	Diagnosis of Irritant Contact Dermatitis	651	27.2.3	Skin Flaps	685
23.6	Treatment of Irritant Contact Dermatitis	652	27.2.4	Stripping Method	685
23.7	ICD in Agricultural Workers	653	27.2.5	Biological Response	686
23.7.1	Acute Agricultural Irritant Dermatitis	653	27.2.6	<i>In Vitro</i> and <i>In Vivo</i> Methodologies	686
23.7.2	Acute Irritation from Pesticides (Fumigants and Insecticides)	653	27.3	Regional Variation in Human and Animal Pesticide Percutaneous Absorption	687
23.7.3	Cumulative Irritant Dermatitis from Pesticides	653	27.4	Percutaneous Absorption from Chemicals in Clothing	689
23.7.4	Plants as Agricultural Irritants	655	27.5	Models for Agricultural Chemical Assessments and Predictions	692
Conclusion		657	27.5.1	The Cluster Analysis Method	692
24.	Photocontact Dermatitis	661	27.5.2	Determinants of Dermal Exposure Ranking Method (DERM): A Method for Pesticide Exposure Assessment for Developing Countries	694
24.1	Introduction	661	27.5.3	Dermal Assessment Estimate (DREAM) Method	695
24.2	Solar Radiation and Photosensitivity	661	27.5.4	Estimation and Assessment Exposure (EASE) Model	695
24.3	Photoirritant Reactions (Phototoxicity)	661	27.5.5	Risk Assessment of Occupational Dermal Exposure (RISKOFDERM)	696
24.4	Photoallergic Contact Dermatitis	662	27.5.6	Biosensors	696
24.5	Pesticides that Cause Phototoxic or Photoallergic Reactions	664	27.6	Biomonitoring: Tool for Human Health Risk Characterization	696
24.6	Approach to the Photosensitive Patient	664	27.7	Skin Decontamination Conclusion	698
24.7	Phototesting	665			
24.8	Histology	666			
24.9	Management Strategies Conclusion	667			
25.	Allergic Contact Dermatitis	669			
25.1	Introduction	669			
25.2	Allergic Contact Dermatitis	669			
25.3	Prevalence of Allergic Contact Dermatitis Due to Agrochemicals	670			
25.4	Chemicals and Cases	670			
25.5	Diagnosis and Treatment of Allergic Contact Dermatitis	672			
25.6	Prevention Conclusion	673			
		674			

28. The Regulatory Evaluation of the Skin Effects of Pesticides	701	32. The Influence of Age on Pesticide Toxicity	819
28.1 Introduction	701	32.1 General Concepts in Differential Sensitivity to Pesticides	819
28.1.1 Basic Patterns of Skin Reaction	701	32.2 Children's Health and Regulation of Pesticides in the United States	821
28.1.2 Testing Requirements and Test Protocols	701	32.3 Age-Related Differences in Sensitivity to Pesticides	822
28.1.3 Regulatory Decisions	704	32.3.1 Organophosphorus Pesticides	822
28.1.4 Integration of Illness Surveillance Data with Experimental Dermal Irritation and Sensitization Tests	704	32.3.2 Organochlorine Insecticides	826
28.2 Review of Use Categories	706	32.3.3 Carbamates	828
28.2.1 Antimicrobial Agents/Disinfectants	706	32.3.4 Pyrethroid Insecticides	828
28.2.2 Insecticides and Insect Repellants	735	32.3.5 Miscellaneous Pesticides	828

Section VII

Exposure Measurement and Mitigation

42. Exposure Framework	971		
42.1 Introduction	971		
42.2 Exposure Science	971		
42.3 Exposure Assessment	973		
42.4 Considerations for Pesticide Exposure Assessments	974		
Conclusion	976		
43. Sampling and Analysis for Nonoccupational Pesticide Exposure Assessments	977		
43.1 Introduction	977		
43.2 Design of Nonoccupational Observational Exposure Measurement Studies	978		
43.3 Sample Collection Methods	981		
43.3.1 Criteria for Selection of Sample Collection Methods	981		
43.3.2 Methods for Estimating Inhalation Exposure	984		
43.3.3 Methods for Estimating Dermal Exposure	984		
43.3.4 Indirect Methods for Estimating Dermal Exposure	985		
43.3.5 Methods for Estimating Indirect Ingestion	985		
43.3.6 Direct Methods for Estimating Dietary Exposure: Duplicate Diet Samples	986		
43.3.7 Water Collection Methods	986		
43.3.8 Soil Measurement Methods	986		
43.3.9 Collection of Biomonitoring Samples	986		
43.3.10 Collection of Ancillary Information Such as Activity Data and Questionnaires	987		
43.4 Analytical Methods for Pesticide Measurements	987		
43.4.1 General Principles	987		
43.4.2 Method Performance Requirements	989		
43.4.3 State-of-the-Science	991		
Conclusion	991		
Acknowledgments	992		
44. Modeling and Predicting Pesticide Exposures	995		
44.1 Introduction	995		
44.1.1 Terminology for Human Exposure Models	996		
44.1.2 Pesticide Exposure Models	997		
44.2 Types of Human Exposure Models	998		
44.2.1 Screening-Level Exposure Models	999		
44.2.2 Comprehensive Human Exposure Models	1002		
44.3 Source-to-Dose Exposure Modeling for Pesticides	1002		
44.3.1 Overview of the Steps in Exposure Modeling	1003		
44.3.2 Human Activity-Based Exposure Modeling	1006		
44.3.3 Toxicokinetic Modeling for Assessing Pesticide Uptake and Distribution	1008		
44.3.4 Exposure Reconstruction and Inverse Modeling	1010		
44.3.5 Sensitivity and Uncertainty Analyses	1011		
44.4 Discussion: Models to Support Pesticide Regulation	1012		
44.4.1 Chromated Copper Arsenate (CCA) Exposures to Children	1013		
44.4.2 Assessing Chlorpyrifos Exposures and Doses	1013		
Conclusion	1016		
Acknowledgments	1017		
45. Biomonitoring: Uses and Considerations for Assessing Nonoccupational Human Exposure to Pesticides	1021		
45.1 Introduction	1021		
45.2 Linking Pesticide Exposure to Health Effects	1021		
45.3 The Uses of Biomonitoring	1022		
45.3.1 Assessing Population-Based Exposure Trends	1022		
45.3.2 Improving Estimates of Exposure and Dose	1026		
45.4 Biomarker Selection and Use	1027		
45.4.1 Sensitivity	1027		
45.4.2 Specificity	1027		
45.4.3 Validity	1029		
45.4.4 Biological Relevance	1029		
45.4.5 Practicality	1029		
45.5 Factors Affecting the Use and Interpretation of Biomarkers of Exposure	1030		
45.5.1 Kinetics	1030		
45.5.2 Urinary Excretion Rate	1031		
45.6 Summary and Suggestions for Future Research	1033		
Conclusion	1034
