Trace Quantitative Analysis by Mass Spectrometry

 WILEY

Contents

Preface	xvii
Acknowledgements	xxiii
1 Measurement, Dimensions and Units	1
1.1 Introduction	1
1.2 The International System of Units (SI)	3
1.3 'Mass-to-Charge Ratio' in Mass Spectrometry	6
1.4 Achievable Precision in Measurement of SI Base Quantities	9
1.5 Molecular Mass Limit for Trace Quantitation by Mass Spectrometry	11
1.6 Summary of Key Concepts	14
2 Tools of the Trade I. The Classical Tools	17
2.1 Introduction	17
2.2 Analytical and Internal Standards: Reference Materials	18
2.2.1 Analytical Standard (Reference Standard) and its Traceability	18
2.2.2 Certified (Standard) Reference Materials (CRMs)	20
2.2.3 Surrogate Internal Standard (SIS)	21
2.2.4 Volumetric Internal Standard (VIS)	25
2.3 The Analytical Balance	25
2.3.1 Balance Calibration	27
2.3.2 Sources of Uncertainty in Weighing	27
2.3.3 Weighing the Analytical Standard	31
2.4 Measurement and Dispensing of Volume	32
2.4.1 Standard Volumetric Flasks	32
2.4.2 Pipets	33
2.4.2a <i>Classical Pipets</i>	33
2.4.2b <i>Micropipets</i>	33
2.4.3 Loop Injectors for High Performance Liquid Chromatography (HPLC)	35
2.4.4 Syringes	38
2.5 Preparation of Solutions for Calibration	39
2.5.1 Matrix-Free Calibration Solutions	40
2.5.2 Matrix Matched Calibrators	40
2.5.3 Quality Control (QC) Samples	41
2.5.3a <i>QCs in Method Development and Validation</i>	41
2.5.3b <i>QCs in Sample Analysis</i>	41
2.6 Introduction to Calibration Methods for Quantitative Analysis	42
2.6.1 Calibration Using an External Standard	42
2.6.2 Calibration for the Method of Standard Additions	44

2.6.3	Calibration Using a Surrogate Internal Standard	44
2.6.4	Curves used in Conjunction with 'Continuing Calibration Verification Standards'	46
2.7	Summary of Key Concepts	47
3	Tools of the Trade II. Theory of Chromatography	51
3.1	Introduction	51
3.2	General Principles of Chemical Separations	53
3.3	Summary of Important Concepts	55
3.4	Plate Theory of Chromatography	58
3.4.1	Elution Equation for the Plate Theory	59
3.4.2	Retention Volume and Time	61
3.4.3	The Separation Ratio (Selectivity Factor) for Two Solutes	62
3.4.4	Capacity Factor (Ratio) of a Solute	62
3.4.5	Column Efficiency and Height Equivalent of the Theoretical Plate	63
3.4.6	Chromatographic Resolution	64
3.4.7	Effective Plate Number	65
3.4.8	Maximum Sample Injection Volume for a Specific Column	65
3.4.9	Peak Capacity of a Column	66
3.4.10	Gaussian Form of the Plate Theory Elution Equation	67
3.5	Nonequilibrium Effects in Chromatography: the van Deemter Equation	69
3.5.1	Multipath Dispersion	70
3.5.2	Longitudinal Diffusion	71
3.5.3	Resistance to Mass Transfer in the Mobile and Stationary Phases	71
3.5.4	Optimization to Maximize Column Efficiency	72
3.5.5	Relationships for Estimating Optimized Conditions	74
3.5.6	Numerical Estimates for Optimized Parameters	76
3.5.7	Ultra-Small Stationary Phase Particles	77
3.5.8	Monolithic Columns	80
3.5.9	Ultra High Flow Rate Liquid Chromatography	81
3.5.10	Packed Microcolumns	81
	3.5.10a The Knox Equation	84
	3.5.10b Chromatographic Dilution	87
	3.5.10c Flow Impedance Parameter and Separation Impedance	87
3.5.11	Gas Chromatography	88
	3.5.11a Effect of Gas Compressibility on Elution Equation for Packed Columns	88
	3.5.11b Open Tubular Columns and the Golay Equation	89
3.5.12	Peak Asymmetry	90
3.6	Gradient Elution	92
3.7	Capillary Electrophoresis and Capillary Electrochromatography	97
	Appendix 3.1 Derivation of the Plate Theory Equation for Chromatographic Elution	102
	Appendix 3.2 Transformation of the Plate Theory Elution Equation from Poisson to Gaussian Form	103
	Appendix 3.3 A Brief Introduction to Snyder's Theory of Gradient Elution	104
	List of Symbols Used in Chapter 3	105
4	Tools of the Trade III. Separation Practicalities	109
4.1	Introduction	109
4.2	The Analyte and the Matrix	110
4.3	Extraction and Clean-Up: Sample Preparation Methods	111
4.3.1	Liquid-Liquid Extraction (LLE)	112
	4.3.1a Solid-Supported Liquid-Liquid Extraction (SLE)	114
	4.3.1b Single Drop Microextraction (SDME)	114
	4.3.1c Dispersive Liquid-Liquid Microextraction (DLLE)	115

4.3.1d	<i>Flow Injection Liquid–Liquid Extraction</i>	115
4.3.1e	<i>Membrane Extraction</i>	115
4.3.1f	<i>Protein Precipitation from Biological Fluids</i>	117
4.3.2	Liquid Extraction of Analytes from Solid Matrices	117
4.3.2a	<i>Soxhlet Extraction</i>	117
4.3.2b	<i>Pressurized Solvent Extraction</i>	117
4.3.2c	<i>Sonication Assisted Liquid Extraction (SAE)</i>	119
4.3.2d	<i>Microwave Assisted Extraction (MAE)</i>	120
4.3.2e	<i>Supercritical Fluid Extraction (SFE)</i>	121
4.3.3	Solid Phase Extraction from Liquids and Gases	124
4.3.3a	<i>Flash Chromatography</i>	124
4.3.3b	<i>Purge-and-Trap Analysis for Volatile Organic Compounds</i>	124
4.3.3c	<i>Solid Phase Extraction (SPE)</i>	125
4.3.3d	<i>Turbulent Flow Chromatography</i>	128
4.3.3e	<i>Molecularly Imprinted Polymers (MIPs)</i>	130
4.3.3f	<i>Solid Phase Microextraction (SPME)</i>	132
4.3.3g	<i>Stir-Bar Sorptive Extraction (SBSE)</i>	133
4.4	Chromatographic Practicalities	133
4.4.1	Stationary Phases for SPE and Liquid Chromatography	133
4.4.1a	<i>Alumina and Silica Particles</i>	134
4.4.1b	<i>Derivatization of Silica for Normal and Reverse Phase Chromatography</i>	136
4.4.1c	<i>Ion Exchange Media</i>	137
4.4.1d	<i>Chiral Separations</i>	137
4.4.1e	<i>Affinity Media</i>	143
4.4.2	Mobile Phases Used in SPE and Liquid Chromatography	144
4.4.2a	<i>Solvent Polarity and Elution Strength</i>	145
4.4.2b	<i>Reverse Phase Chromatography</i>	146
4.4.2c	<i>Hydrophilic Interaction Chromatography (HILIC)</i>	146
4.4.3	Mobile and Stationary Phases for Gas Chromatography	147
4.4.3a	<i>GC Mobile Phase</i>	147
4.4.3b	<i>Temperature Programming</i>	149
4.4.3c	<i>GC Stationary Phases</i>	150
4.4.4	Sample Injection Devices for Chromatography	152
4.4.4a	<i>Automated Loop Injectors for HPLC</i>	152
4.4.4b	<i>GC Injectors</i>	152
4.4.5	Pumps for HPLC	154
4.4.6	Capillary Electrophoresis and Electrochromatography	157
4.4.7	Micro Total Analysis Systems (Lab-on-a-Chip)	160
4.4.8	General Comments on Detectors for Chromatography	163
4.5	Summary of Key Concepts	166
Appendix 4.1 Responses of Chromatographic Detectors: Concentration vs Mass–Flux Dependence		169
5	Tools of the Trade IV. Interfaces and Ion Sources for Chromatography–Mass Spectrometry	173
5.1	Introduction	174
5.1.1	Matrix Effects	175
5.2	Ion Sources that can Require a Discrete Interface Between Chromatography and Source	176
5.2.1	Electron Ionization and Chemical Ionization	176
5.2.1a	<i>Discrete Chromatograph-Ion Source Interfaces</i>	180
5.2.1b	<i>Chemical Derivatization for EI and CI</i>	182
5.2.2	Matrix Assisted Laser Desorption/Ionization (MALDI)	184
5.2.3	‘Lab-on-a-Chip’	195

5.3	Ion Sources not Requiring a Discrete Interface	196
5.3.1	Flow Fast Atom Bombardment (Flow-FAB)	196
5.3.2	Thermospray Ionization	197
5.3.3	Atmospheric Pressure Ionization (API)	198
	5.3.3a <i>Coupling of API Sources to Mass Spectrometers</i>	199
5.3.4	Atmospheric Pressure Chemical Ionization (APCI)	203
5.3.5	Atmospheric Pressure Photoionization (APPI)	206
5.3.6	Electrospray Ionization (ESI)	211
	5.3.6a <i>Ionization Suppression/Enhancement: Matrix Effects</i>	221
	5.3.6b <i>ESI-MS: Concentration or Mass Flow Dependent?</i>	230
5.3.7	Atmospheric Pressure Desorption Methods	236
5.4	Source–Analyzer Interfaces Based on Ion Mobility	237
5.5	Summary of Key Concepts	238
5.1	Appendix 5.1: Methods of Sample Preparation for Analysis by MALDI	242
6	Tools of the Trade V. Mass Analyzers for Quantitation: Separation of Ions by m/z Values	245
6.1	Introduction	245
6.2	Mass Analyzer Operation Modes and Tandem Mass Spectrometry	248
6.2.1	The Selectivity–Sensitivity Compromise	249
6.2.2	Tandem Mass Spectrometry (MS/MS)	251
6.2.3	Figures of Merit for Mass Analyzers	255
	6.2.3a <i>Accessible m/z Range</i>	255
	6.2.3b <i>Resolving Power</i>	256
	6.2.3c <i>Accuracy and Precision of Mass Measurement</i>	257
	6.2.3d <i>Transmission Efficiency</i>	258
	6.2.3e <i>Duty Cycle</i>	259
	6.2.3f <i>Data Acquisition Rate</i>	259
	6.2.3g <i>Dynamic Range (Range of Reliable Response)</i>	261
	6.2.3h <i>Versatility for Tandem Mass Spectrometry</i>	261
	6.2.3i <i>Ease of Use</i>	261
	6.2.3j <i>Capital and Maintenance Costs</i>	261
6.3	Motion of Ions in Electric and Magnetic Fields	261
6.3.1	Introduction to Interactions of Electric and Magnetic Fields with Ions	263
6.3.2	Ion Optics and Lenses: Instrument Tuning	265
6.4	Mass Analyzers	266
6.4.1	Calibration of the m/z Axis ('Mass Calibration')	266
6.4.2	Quadrupole Mass Filters	267
	6.4.2a <i>RF-Only Quadrupoles</i>	276
6.4.3	Triple Quadrupole Instruments	277
6.4.4	Magnetic Sector Analyzers	280
6.4.5	Quadrupole Ion Traps	284
	6.4.5a <i>Three-Dimensional (Paul) Traps</i>	285
	6.4.5b <i>Two-Dimensional (Linear) Traps</i>	301
6.4.6	The QqQ _{trap} Analyzer	309
6.4.7	Time of Flight and QqTOF Analyzers	311
6.4.8	FTICR and Orbitrap Analyzers	320
6.5	Activation and Dissociation of Ions	320
6.6	Vacuum Systems	326
6.6.1	Pumping Speed, Conductance and Gas Flow	327
6.6.2	Vacuum Pumps	329
	6.6.2a <i>Rotary Vane Pumps</i>	329
	6.6.2b <i>Diffusion Pumps</i>	330

6.6.2c	<i>Turbomolecular Pumps</i>	330
6.6.2d	<i>Differential Pumping</i>	332
6.6.3	Vacuum Gauges	334
6.6.3a	<i>Capacitance Manometer</i>	334
6.6.3b	<i>Pirani Gauge</i>	334
6.6.3c	<i>Thermocouple Gauge</i>	335
6.6.3d	<i>Ionization Gauge</i>	335
6.7	Summary of Key Concepts	336
Appendix 6.1	Interaction of Electric and Magnetic Fields with Charged Particles	339
Appendix 6.2	Leak Detection	340
Appendix 6.3	List of Symbols Used in Chapter 6	341
7	Tools of the Trade VI. Ion Detection and Data Processing	345
7.1	Introduction	345
7.1.1	Signal:Noise vs Signal:Background	347
7.1.1a	<i>Shot Noise in the Ion Beam</i>	350
7.1.1b	<i>Data Smoothing Before Integration</i>	352
7.1.1c	<i>Integration and Experimental Determination of Signal:Background</i>	353
7.2	Faraday Cup Detectors	353
7.3	Electron Multipliers	354
7.3.1	Discrete Dynode Secondary Electron Multipliers	354
7.3.1a	<i>Off-Axis Conversion Dynodes</i>	357
7.3.2	Channel Electron Multipliers	359
7.3.2a	<i>Single Channel Electron Multipliers</i>	359
7.3.2b	<i>Channel Electron Multiplier Arrays</i>	362
7.4	Post-Detector Electronics	365
7.4.1	Analog Signal Processing	365
7.4.2	Digital Electronics for Ion Counting Detectors	366
7.4.3	Computer-Based Data Systems	367
7.5	Summary of Key Concepts	368
8	Tools of the Trade VII: Statistics of Calibration, Measurement and Sampling	373
8.1	Introduction	374
8.1.1	Systematic and Random Errors: Accuracy and Precision	375
8.2	Univariate Data: Tools and Tests for Determining Accuracy and Precision	377
8.2.1	Mean, Median, Standard Deviation, Standard Error	377
8.2.2	Significant Figures and Propagation of Error	379
8.2.3	Normal (Gaussian) Distribution	382
8.2.4	Hypothesis Tests: False Positives and False Negatives	385
8.2.5	Student's <i>t</i> -Test and Fisher F-Test for Comparison of Means and Variances: Applications to Two Data Sets	387
8.2.6	Statistical Testing of More Than Two Data Sets: Bartlett Test and ANOVA	394
8.2.7	Multiple-Range Test and Huber–Davies Test for Outliers	398
8.3	Bivariate Data: Tools and Tests for Regression and Correlation	398
8.3.1	Correlation Analysis	401
8.3.2	Simple Linear Regression for Homoscedastic Data	401
8.3.3	Test for Goodness of Fit: Irreproducibility, Heteroscedacity and Nonlinearity	407
8.3.4	Inversion of the Calibration Equation	410
8.3.5	Weighted Linear Regression	411
8.3.6	Regression for Nonlinear Data: the Quadratic Fitting Function	415
8.3.7	Summarized Procedure to Determine Best-Fit Calibration Curve	416
8.3.8	Nonlinear Least-Squares Regression	418

8.4	Limits of Detection and Quantitation	418
8.4.1	Limit of Detection	419
8.4.2	Limits of Quantitation	427
8.5	Calibration and Measurement: Systematic and Random Errors	428
8.5.1	Analyses Without Internal Standards	428
8.5.1a	<i>External Linear Calibration With a Zero Intercept</i>	428
8.5.1b	<i>Method of Standard Additions</i>	430
8.5.1c	<i>External Linear Calibration With a Nonzero Intercept</i>	432
8.5.1d	<i>Systematic Errors in the Method of Standard Additions: Youden Plots</i>	434
8.5.1e	<i>Strategies When Analytical Standards are not Available</i>	435
8.5.2	Analyses Using Internal Standards	436
8.5.2a	<i>Volumetric Internal Standards for GC Analyses</i>	437
8.5.2b	<i>Use of Surrogate Internal Standards</i>	439
8.5.2c	<i>Cross-Contributions Between Analyte and Internal Standard – a Need for Nonlinear Regression</i>	444
8.6	Statistics of Sampling of Heterogeneous Matrices	448
8.7	Summary of Key Concepts	453
Appendix 8.1	A Brief Statistics Glossary	455
Appendix 8.2	Symbols Used in Discussion of Calibration Methods	458
9	Method Development and Fitness for Purpose	461
9.1	Introduction	461
9.2	Fitness for Purpose and Managing Uncertainty	461
9.3	Issues Between Analyst and Client: Examining What's at Stake	463
9.3.1	Define the Analytical Problem	463
9.3.2	Consider the Needs of all Interested Parties	463
9.3.2a	<i>Client's Perspective vs Analyst's Perspective</i>	463
9.3.3	Define Uncertainty Tolerance	465
9.3.3a	<i>Setting Targets for Quantitation</i>	466
9.3.3b	<i>Setting Targets for Identification</i>	466
9.3.4	Balancing Thoroughness vs Time and Resources	472
9.3.5	The Analyst as Expert Witness	474
9.4	Formulating a Strategy	474
9.4.1	Defining the Scope and Method Requirements	474
9.4.2	Considering Prevailing Guidelines or Regulatory Requirements	476
9.4.2a	<i>Good Laboratory Practice</i>	476
9.4.2b	<i>Laboratory Accreditation</i>	478
9.4.2c	<i>Method Development and Validation Without Established Guidance</i>	478
9.4.3	The Analyte	478
9.4.3a	<i>Structures and Chemical Properties – MS Considerations</i>	478
9.4.3b	<i>Structures and Chemical Properties – Analytical Considerations</i>	479
9.4.4	The Reference Standard	479
9.4.4a	<i>Availability and Source</i>	479
9.4.4b	<i>Receipt and Documentation</i>	480
9.4.4c	<i>Certificate of Analysis</i>	481
