Preface xxvii

I Biological Evidence

1 Forensic Biology: A Subdiscipline of Forensic Science **3**

1.1 Forensic Laboratory Services 3
1.1.1 Common Disciplines 3
1.1.2 Other Forensic Science Services 3
1.1.2.1 Forensic Pathology 3
1.1.2.2 Forensic Anthropology 5
1.1.2.3 Forensic Entomology 6
1.1.2.4 Forensic Odontology 6
1.2 A Brief History of Development of Forensic Biology 9
1.2.1 Antigen Polymorphism 11
1.2.2 Protein Polymorphism 12
1.2.3 DNA Polymorphism 14
Bibliography 15
Study Questions 16

2 Sources of DNA Evidence **19**

2.1 Introduction to Cells 19
2.1.1 Cell Membrane 19
2.1.2 Cytoplasm 19
2.1.3 Nucleus 20
2.2 Examples of Biological Evidence 22
2.2.1 Blood 22
2.2.2 Hair 24
2.2.2.1 Biology of Hair 24
2.2.2.2 Hair as Source of DNA Evidence 26

2.2.3 Bone 27
2.2.3.1 Biology of Bone 27
2.2.3.2 Bone as Source of DNA Evidence 28
2.2.4 Teeth 30
2.2.4.1 Biology of Teeth 30
2.2.4.2 Teeth as Sources of DNA Evidence 30
Bibliography 31
Study Questions 33

3 Crime Scene Investigation and Laboratory Analysis of Biological Evidence 35

3.1 Crime Scene Investigation 35
3.1.1 Protection of Crime Scene 35
3.1.2 Documentation 36
3.1.3 Chain of Custody 36
3.1.4 Recognition of Biological Evidence 39
3.1.5 Searches 39
3.1.6 Collection of Biological Evidence 40
3.1.7 Marking Evidence 44
3.1.8 Packaging and Transportation 45
3.2 Laboratory Analysis of Biological Evidence 46
3.2.1 Identification of Biological Evidence 47
3.2.2 Comparison of Individual Characteristics of Biological Evidence 47
3.2.3 Crime Scene Reconstruction 48
3.2.4 Reporting Results and Expert Testimony 48
Bibliography 49
Study Questions 49

II Essential Serology

4 Serology Concepts 53

4.1 Serological Reagents 53
4.1.1 Antigens 53
4.1.2 Antibodies 53
4.1.2.1 Polyclonal Antibodies 55
4.1.2.2 Monoclonal Antibodies 55
4.1.2.3 Antiglobulins 56
4.2 Strength of Antigen–Antibody Binding 58

4.3 Antigen–Antibody Binding Reactions 59
4.3.1 Primary Reactions 59
4.3.2 Secondary Reactions 61
4.3.2.1 Precipitation 61
4.3.2.2 Agglutination 62
Bibliography 66
Study Questions 67

5 Serology Techniques 69

5.1 Primary Binding Assays 69
5.1.1 Enzyme-Linked Immunosorbent Assay (ELISA) 69
5.1.2 Immunochromatographic Assays 71
5.2 Secondary Binding Assays 75
5.2.1 Precipitation-Based Assays 75
5.2.1.1 Immunodiffusion 75
5.2.1.2 Electrophoretic Methods 77
5.2.2 Agglutination-Based Assays 79
5.2.2.1 Direct Agglutination Assay 79
5.2.2.2 Passive Agglutination Assay 80
5.2.2.3 Agglutination Inhibition Assay 81
Bibliography 81
Study Questions 82

III Forensic Serology

6 Identification of Blood 85

6.1 Biological Properties 85
6.2 Presumptive Assays for Identification 88
6.2.1 Mechanisms of Presumptive Assays 88
6.2.1.1 Oxidation–Reduction Reactions 88
6.2.2 Colorimetric Assays 88
6.2.2.1 Phenolphthalin Assay 88
6.2.2.2 Leucomalachite Green (LMG) Assay 89
6.2.2.3 Benzidine and Derivatives 89
6.2.3 Chemiluminescence and Fluorescence Assays 91
6.2.3.1 Luminol (3-aminophthalhydrazide) 91
6.2.3.2 Fluorescin 92
6.2.4 Factors Affecting Presumptive Assay Results 92
6.3 Confirmatory Assays for Identification 93

ystal Assays 93
6.3.1.1 Hemochromagen Crystal Assay 93
6.3.1.2 Hematin Crystal Assay 93
6.3.2 Other Assays 94
Bibliography 95
Study Questions 98

7 Species Identification 101

7.1 General Considerations 101
7.1.1 Types of Antibodies 101
7.1.2 Titration of Antibodies 102
7.1.3 Antibody Specificity 102
7.1.4 Optimal Conditions for Antigen–Antibody Binding 103
7.1.5 Sample Preparation 103
7.2 Assays 104
7.2.1 Immunochromatographic Assays 104
7.2.1.1 Identification of Human Hemoglobin Protein 104
7.2.2.2 Identification of Human Glycophorin A Protein 106
7.2.2 Ring Assay 106
7.2.3 Ouchterlony Assay 106
7.2.4 Crossed-Over Electrophoresis 108
Box 1: Ring Assay Procedure 109
Box 2: Ouchterlony Assay Procedure 110
Box 3: Crossed-Over Electrophoresis Procedure 111
Bibliography 112
Study Questions 113

8 Identification of Semen 115

8.1 Biological Characteristics 115
8.1.1 Spermatozoa 116
8.1.2 Acid Phosphatase (AP) 117
8.1.3 Prostate-Specific Antigen (PSA) 117
8.1.4 Seminal Vesicle-Specific Antigen (SVSA) 118
8.2 Analytical Techniques for Identifying Semen 118
8.2.1 Presumptive Assays 118
8.2.1.1 Lighting Techniques for Visual Examination of Semen Stains 118
8.2.1.2 Acid Phosphatase Techniques 119
8.2.2 Confirmatory Assays 121
8.2.2.1 Microscopic Examination of Spermatozoa 121
8.2.2.2 Identification of Prostate-Specific Antigen 123

8.2.2.3 Identification of Seminal Vesicle-Specific Antigen 125
8.2.2.4 RNA-Based Assays 128
Bibliography 130
Study Questions 134

9 Identification of Saliva and Other Biological Fluids 135

9.1 Identification of Saliva 135
9.1.1 Biological Characteristics of Saliva 135
9.1.1.1 Amylases 135
9.1.2 Analytical Techniques for Identification of Saliva 136
9.1.2.1 Presumptive Assays 137
9.1.2.2 Confirmatory Assays 139
9.2 Other Biological Fluids 144
Bibliography 147
Study Questions 150

10 Blood Group Typing and Protein Profiling 153

10.1 Blood Group Typing 153
10.1.1 Blood Groups 153
10.1.2 ABO Blood Group System 153
10.1.2.1 Biosynthesis of Antigens 155
10.1.2.2 Molecular Basis of ABO System 157
10.1.2.3 Secretors 158
10.1.2.4 Inheritance of A and B Antigens 158
10.1.3 Forensic Applications of Blood Group Typing 159
10.1.4 Blood Group Typing Techniques 160
10.1.4.1 Lattes Crust Assay 160
Box 1: Lattes Crust Assay Procedure 162
10.1.4.2 Absorption–Elution Assay 162
10.2 Forensic Protein Profiling 163
10.2.1 Methods 166
10.2.1.1 Matrices Supporting Protein Electrophoresis 166
10.2.1.2 Separation by Molecular Weight 166
10.2.1.3 Separation by Isoelectric Point 168
10.2.2 Erythrocyte Protein Polymorphisms 169
10.2.2.1 Erythrocyte Isoenzymes 169
10.2.2.2 Hemoglobin 169
10.2.3 Serum Protein Polymorphisms 170

Bibliography 173
Study Questions 180

IV Basic DNA Techniques

11 Introduction to Human Genome 185

11.1 Structure and Properties of DNA 185
11.1.1 Nucleotides and Polynucleotides 185
11.1.2 Double Helix 185
11.1.3 Denaturation and Renaturation of DNA 185
11.1.4 Organization of DNA into Chromosomes 187
11.1.5 Human Chromosomes 189
11.2 Human Nuclear Genome 191
11.2.1 Genes and Related Sequences 191
11.2.2 Intergenic Noncoding Sequences 193
11.2.2.1 Interspersed Repeats 193
11.2.2.2 Tandem Repeats 193
11.3 Human DNA Polymorphisms 194
Bibliography 195
Study Questions 196

12 DNA Extraction 199

12.1 Basic Principles 199
12.1.1 Cell and Tissue Disruption 199
12.1.2 Lysis of Membranes and Organelles 199
12.1.3 Removal of Proteins and Cytoplasmic Contaminants 200
12.1.4 Contamination 200
12.1.5 Storage of DNA Solutions 201
12.2 Methods of DNA Extraction 201
12.2.1 Extraction with Phenol-Chloroform 201
12.2.2 Extraction by Boiling Lysis and Chelation 202
12.2.3 Silica-Based Extraction 204
12.2.4 Differential Extraction 206
Bibliography 207
Study Questions 209

13 DNA Quantitation 211

13.1 Slot Blot Assay 211
13.2 Fluorescent Interchelating Dye Assay 214

13.3 Quantitative PCR Assay 214
13.3.1 Real-Time Quantitative PCR 215
13.3.1.1 TaqMan method 217
Bibliography 220
Study Questions 221

14 DNA Amplification by Polymerase Chain Reaction 223

14.1 Basic Principles of Polymerase Chain Reaction 223
14.2 Essential PCR Components 224
14.2.1 Thermostable DNA Polymerases 224
14.2.2 PCR Primers 225
14.2.3 Other Components 226
14.3 Parameters 226
14.3.1 Cycles 227
14.3.2 Controls 228
14.4 Factors Affecting PCR 228
14.4.1 Template Degradation 228
14.4.2 Low Copy Number of Template 228
14.4.3 Inhibitors 229
14.4.4 Contamination 229
14.5 Reverse Transcriptase PCR for RNA-Based Assays 229
14.5.1 Essential Features of RNA 229
14.5.2 Central Dogma 232
14.5.3 Reverse Transcriptase PCR 232
14.5.4 Forensic Applications of RNA-Based Assays 233
Bibliography 234
Study Questions 238

15 DNA Electrophoresis 241

15.1 Basic Principles 241
15.1.1 Estimation of DNA Size 241
15.2 Supporting Matrices 242
15.2.1 Agarose 243
15.2.2 Polyacrylamide 244
15.3 Apparatus and Forensic Applications 246
15.3.1 Slab Gel Electrophoresis 246
15.3.1.1 Agarose Gel Electrophoresis 246
15.3.1.2 Polyacrylamide Gel Electrophoresis 247
15.3.2 Capillary Electrophoresis 249

Bibliography 250
Study Questions 252

16 Detection Methods 253

16.1 Direct Detection of DNA in Gels 253
16.1.1 Ethidium Bromide Staining 253
16.1.2 Silver Staining 253
16.2 Detection of DNA Probes in Hybridization-Based Assay 254
16.2.1 Radioisotope Labeled Probes 254
16.2.2 Enzyme-Conjugated Probe with Chemiluminescence Reporting System 255
16.2.3 Biotinylation of DNA with Colorimetric Reporting System 257
16.2.3.1 Biotin 257
16.2.3.2 Enzyme-Conjugated Avidin 258
16.2.3.3 Reporter Enzyme Assay 258
16.3 Detection Methods for PCR-Based Assays 259
16.3.1 Fluorescence Labeling 259
16.3.1.1 Fluorescent Dyes 259
16.3.1.2 Labeling Methods 259
16.3.1.3 Fluorophore Detection 262
Bibliography 262
Study Questions 264

V Forensic DNA Profiling

17 Variable Number Tandem Repeat Profiling 269

17.1 VNTR Loci for Forensic Testing 269
17.2 Restriction Fragment Length Polymorphism (RFLP) 269
17.2.1 Restriction Endonuclease Digestion 272
17.2.2 Southern Transfer and Hybridization 273
17.2.3 Hybridization 274
17.2.4 Factors Affecting RFLP Results 278
17.2.4.1 DNA Degradation 278
17.2.4.2 Restriction Digestion-Related Artifacts 278
17.2.4.3 Electrophoresis and Blotting Artifacts 280
17.3 Amplified Fragment Length Polymorphism (AFLP) 281
Bibliography 283
Study Questions 286

18 Autosomal STR Profiling 287

18.1 Characteristics of STR Loci 287
18.1.1 Core Repeat and Flanking Regions 287
18.1.2 Repeat Unit Length 288
18.1.3 Core Repeat Sequences 289
18.2 STR Loci Commonly Used for Forensic DNA Profiling 289
18.3 Forensic STR Analysis 293
18.4 STR Genotyping 294
18.4.1 Determining Sizes of STR Fragments 294
18.4.2 Determining Genotypes of STR Fragments 296
18.5 Factors Affecting Genotyping Results 297
18.5.1 Mutations 297
18.5.1.1 Mutations at STR Core Repeat Regions 297
18.5.1.2 Chromosomal and Gene Duplications 297
18.5.1.3 Point Mutations 299
18.5.2 Amplification Artifacts 300
18.5.2.1 Stuttering 300
18.5.2.2 Non-template Adenylation 300
18.5.2.3 Heterozygote Imbalance 301
18.5.2.4 Allelic Dropout 302
18.5.3 Electrophoretic Artifacts 302
18.5.3.1 Pull-Up Peaks 302
18.5.3.2 Spikes 303
18.6 Genotyping of Challlenging Forensic Sample 303
18.6.1 Degraded DNA 303
18.6.2 Low Copy Number DNA Testing 304
18.6.3 Mixtures 306
18.7 Interpretation of STR Profiling Results 306
Bibliography 308
Study Questions 312

19 Y Chromosome Profiling and Gender Typing 317

19.1 Human Y Chromosome Genome 317
19.1.1 Pseudo-Autosomal Region 318
19.1.2 Male-Specific Y Region 318
19.1.3 Polymorphic Sequences 319
19.2 Profiling Systems 319
19.2.1 Y-STR 319
19.2.2 Core Y-STR Loci 320
19.2.3 Multiplex Y-STR 322

19.3 Gender Typing 323
19.3.1 Amelogenin Locus 324
19.3.2 AMELY Null Mutations 326
Bibliography 326
Study Questions 331

20 Single Nucleotide Polymorphism Profiling 333

20.1 Basic Characteristics of SNPs 333
20.2 Forensic Applications of SNP Profiling 334
20.2.1 HLA-DQA1 LOCUS 334
20.2.1.1 Commercial Kits 334
20.2.1.2 Allele-Specific Oligonucleotide Hybridization 336
20.2.2 Existing and Potential Applications 340
20.2.2.1 Application of SNPs for Forensic Identification 340
20.2.2.2 Potential Application of SNP for Phenotyping 340
20.2.2.3 Techniques 341
Bibliography 344
Study Questions 350

21 Mitochondrial DNA Profiling 351

21.1 Human Mitochondrial Genome 351
21.1.1 Genetic Contents of Mitochondrial Organelle Genomes 351
21.1.2 Maternal Inheritance of mtDNA 352
21.2 mtDNA Polymorphic Regions 352
21.2.1 Hypervariable Regions 352
21.2.2 Heteroplasmy 354
21.2.2.1 Sequence Heteroplasmy 354
21.2.2.2 Length Heteroplasmy 354
21.3 Forensic mtDNA Testing 355
21.3.1 General Consideration 355
21.3.2 mtDNA Screen Assay 356
21.3.3 mtDNA Sequencing 357
21.3.3.1 PCR Amplification 357
21.3.3.2 DNA Sequencing Reactions 358
21.3.3.3 Electrophoresis and Sequence Analysis 361
21.3.3.4 Mitotype Designations 362
21.3.4 Interpretation of mtDNA Profiling Results 364
Bibliography 364
Study Questions 366

VI Forensic Issues

22 DNA Databases 373

22.1 U.K. National Database 373
22.1.1 Brief History 373
22.1.2 Management 373
22.1.3 Index 375
22.1.4 Entries 375
22.2 U.S. Combined DNA Index System 375
22.2.1 Brief History 375
22.2.2 Infrastructure 375
22.2.3 Management 376
22.2.4 Index 376
22.2.5 Database Entries 377
22.2.6 DNA Markers 377
22.3 Database Applications for Criminal Investigations 377
22.3.1 Case-to-Offender Searches 377
22.3.2 Case-to-Case Searches 378
22.3.3 Familial Searches 379
22.4 Ethical Issues 380
22.4.1 Entry Criteria 380
22.4.2 Retention of Samples 381
Bibliography 381
Study Questions 383

23 Evaluation of Strength of Forensic DNA Profiling Results 385

23.1 Basic Principles of Genetics 385
23.1.1 Mendelian Genetics 385
23.1.2 Population Genetics 386
23.1.2.1 Allele Frequency 386
23.1.2.2 Genotype Frequency 386
23.1.2.3 Heterozygosity 386
23.1.2.4 Hardy-Weinberg Principle 387
23.1.2.5 Testing for HW Proportions of Population Database 387
23.1.2.6 Probability of Match 393
23.2 Statistical Analysis of DNA Profiling Results 393
23.2.1 Genotypes 395

23.2.1.1 Profile Probability 395
23.2.1.2 Likelihood Ratio 398
23.2.2 Haplotypes 398
23.2.2.1 Mitotypes Observed in Database 400
23.2.2.2 Mitotype Not Observed in Database 401
Bibliography 401
Study Questions 403

24 Quality Assurance and Quality Control 405

24.1 United States Quality Standards 405
24.2 International Quality Standards 407
24.3 Laboratory Accreditation 408
24.4 Laboratory Validation 408
24.5 Proficiency Testing 408
24.6 Certification 409
24.7 Forensic DNA Analyst Qualifications 410
Bibliography 410
Study Questions 414

Index 415
