

Francis M. Vanek Louis D. Albright

Energy Systems Engineering

Evaluation & Implementation

Contents

Preface	xv
Acknowledgments	xix
1 Introduction	1
1-1 Overview	1
1-2 Introduction	1
1-2-1 Historic Growth in Energy Supply	2
1-3 Relationship between Energy, Population, and Wealth	4
1-3-1 Correlation between Energy Use and Wealth	5
1-3-2 Human Development Index: An Alternative Means of Evaluating Prosperity	7
1-4 Pressures Facing World due to Energy Consumption	8
1-4-1 Industrial versus Emerging Countries	9
1-4-2 Pressure on CO ₂ Emissions	13
1-4-3 Observations about Energy Use and CO ₂ Emissions Trends	14
1-4-4 Discussion: Contrasting Mainstream and Deep Ecologic Perspectives on Energy Requirements	15
1-5 Units of Measure Used in Energy Systems	16
1-5-1 Metric (SI) Units	17
1-5-2 U.S. Standard Customary Units	19
1-5-3 Units Related to Oil Production and Consumption	19
1-6 Summary	20
References	20
Bibliography	20
Exercises	21
2 Systems Tools for Energy Systems	23
2-1 Overview	23
2-2 Introduction	23
2-2-1 Conserving Existing Energy Resources versus Shifting to Alternative Resources	24
2-2-2 The Concept of Sustainable Development	25
2-3 Fundamentals of the Systems Approach	27
2-3-1 Initial Definitions	27
2-3-2 Steps in the Application of the Systems Approach	29
2-3-3 Stories, Scenarios, and Models	34

2-4	Other Systems Tools Applied to Energy	37
2-4-1	Systems Dynamics Models: Exponential Growth, Saturation, and Causal Loops	38
2-5	Other Tools for Energy Systems	45
2-5-1	Kaya Equation: Factors that Contribute to Overall CO ₂ Emissions	45
2-5-2	Life-Cycle Analysis and Energy Return on Investment	46
2-5-3	Multi-Criteria Analysis of Energy Systems Decisions	49
2-5-4	Choosing among Alternative Solutions Using Optimization	50
2-5-5	Understanding Contributing Factors to Time-Series Energy Trends Using Divisia Analysis	53
2-6	Summary	57
	References	58
	Bibliography	58
	Exercises	59
3	Economic Tools for Energy Systems	61
3-1	Overview	61
3-2	Introduction	61
3-2-1	The Time Value of Money	62
3-3	Economic Analysis of Energy Projects and Systems	63
3-3-1	Definition of Terms	64
3-3-2	Evaluation without Discounting	64
3-3-3	Discounted Cash Flow Analysis	65
3-3-4	Levelized Cost of Energy	68
3-4	Direct versus External Costs and Benefits	69
3-5	Intervention in Energy Investments to Achieve Social Aims	70
3-5-1	Methods of Intervention in Energy Technology Investments	71
3-5-2	Critiques of Intervention in Energy Investments	73
3-6	Summary	73
	References	74
	Exercises	74
4	Climate Change and Climate Modeling	77
4-1	Overview	77
4-2	Introduction	77
4-2-1	Relationship between the Greenhouse Effect and Greenhouse Gas Emissions	78
4-2-2	Carbon Cycle and Solar Radiation	78
4-2-3	Quantitative Imbalance in CO ₂ Flows into and out of the Atmosphere	79

4-2-4	Consensus on the Human Link to Climate Change: Taking the Next Steps	82
4-2-5	Early Indications of Change and Remaining Areas of Uncertainty	83
4-3	Modeling Climate and Climate Change	86
4-3-1	Relationship between Wavelength, Energy Flux, and Absorption	87
4-3-2	A Model of the Earth-Atmosphere System	91
4-3-3	General Circulation Models (GCMs) of Global Climate	95
4-4	Climate in the Future	96
4-4-1	Positive and Negative Feedback from Climate Change	96
4-4-2	Scenarios for Future Rates of CO ₂ Emissions, CO ₂ Stabilization Values, and Average Global Temperature	99
4-4-3	Current Efforts to Counteract Climate Change	102
4-5	Summary	104
	References	104
	Bibliography	105
	Exercises	105
5	Fossil Fuel Resources	107
5-1	Overview	107
5-2	Introduction	107
5-2-1	Characteristics of Fossil Fuels	108
5-2-2	Current Rates of Consumption and Total Resource Availability	110
5-2-3	CO ₂ Emissions Comparison and a “Decarbonization” Strategy	113
5-3	Decline of Conventional Fossil Fuels and a Possible Transition to Nonconventional Alternatives	114
5-3-1	Hubbert Curve Applied to Resource Lifetime	114
5-3-2	Potential Role for Nonconventional Fossil Resources as Substitutes for Oil and Gas	118
5-3-3	Discussion: The Past and Future of Fossil Fuels	120
5-4	Summary	122
	Bibliography	122
	Exercises	122
6	Stationary Combustion Systems	125
6-1	Overview	125
6-2	Introduction	125
6-2-1	A Systems Approach to Combustion Technology	127
6-3	Fundamentals of Combustion Cycle Calculation	128
6-3-1	Rankine Vapor Cycle	129
6-3-2	Brayton Gas Cycle	133

6-4	Advanced Combustion Cycles for Maximum Efficiency	137
6-4-1	Supercritical Cycle	137
6-4-2	Combined Cycle	138
6-4-3	Cogeneration and Combined Heat and Power	142
6-5	Economic Analysis of Investments in High-Efficiency Combustion Systems	151
6-5-1	Calculation of Levelized Cost of Electricity Production	152
6-5-2	Economics of Small-Scale Cogeneration Systems: A Case Study	155
6-6	Incorporating Environmental Considerations into Combustion Project Analysis	156
6-7	Fossil Fuel Combustion in the Future	158
6-8	Systems Issues in Combustion in the Future	160
6-9	Summary	161
	References	161
	Bibliography	162
	Exercises	162
7	Carbon Sequestration	165
7-1	Overview	165
7-2	Introduction	165
7-3	Indirect Sequestration	166
7-3-1	The Photosynthesis Reaction: The Core Process of Indirect Sequestration	168
7-3-2	Indirect Sequestration in Practice	169
7-3-3	Future Prospects for Indirect Sequestration	171
7-4	Geological Storage of CO ₂	172
7-4-1	Removing CO ₂ from Waste Stream	172
7-4-2	Options for Direct Sequestration in Geologically Stable Reservoirs	173
7-4-3	Prospects for Geological Sequestration	179
7-5	Sequestration through Conversion of CO ₂ into Inert Materials	180
7-6	Direct Removal of CO ₂ from Atmosphere for Sequestration	182
7-7	Overall Comparison of Sequestration Options	184
7-8	Summary	185
	Reference	186
	Bibliography	186
	Exercises	186
8	Nuclear Energy Systems	189
8-1	Overview	189
8-2	Introduction	189
8-2-1	Brief History of Nuclear Energy	190
8-2-2	Current Status of Nuclear Energy	192

8-3	Nuclear Reactions and Nuclear Resources	193
8-3-1	Reactions Associated with Nuclear Energy	196
8-3-2	Availability of Resources for Nuclear Energy	199
8-4	Reactor Designs: Mature Technologies and Emerging Alternatives	200
8-4-1	Established Reactor Designs	200
8-4-2	Alternative Fission Reactor Designs	205
8-5	Nuclear Fusion	208
8-6	Nuclear Energy and Society: Environmental, Political, and Security Issues	210
8-6-1	Contribution of Nuclear Energy to Reducing CO ₂ Emissions	210
8-6-2	Management of Radioactive Substances During Life-Cycle of Nuclear Energy	211
8-6-3	Nuclear Energy and the Prevention of Proliferation	217
8-6-4	The Effect of Public Perception on Nuclear Energy	218
8-6-5	Future Prospects for Nuclear Energy	221
8-7	Summary	221
	References	222
	Bibliography	222
	Exercises	223
9	The Solar Resource	225
9-1	Overview	225
9-2	Introduction	225
9-2-1	Availability of Energy from the Sun and Geographic Availability	225
9-2-2	Direct, Diffuse, and Global Insolation	227
9-3	Definition of Solar Geometric Terms and Calculation of Sun's Position by Time of Day	234
9-3-1	Relationship between Solar Position and Angle of Incidence on Solar Surface	237
9-3-2	Method for Approximating Daily Energy Reaching a Solar Device	239
9-4	Effect of Diffusion on Solar Performance	240
9-4-1	Effect of Surface Tilt on Diffusion	243
9-5	Summary	245
	References	245
	Bibliography	245
	Exercises	246
10	Solar Photovoltaic Technologies	249
10-1	Overview	249
10-2	Introduction	249
10-3	Fundamentals of PV Cell Performance	252

10-3-1	Losses in PV Cells and Gross Current Generated by Incoming Light	253
10-3-2	Net Current Generated as a Function of Device Parameters	255
10-3-3	Other Factors Affecting Performance	259
10-3-4	Calculation of Unit Cost of PV Panels	259
10-4	Design and Operation of Practical PV Systems	260
10-4-1	Available System Components for Different Types of Designs	260
10-4-2	Estimating Output from PV System: Basic Approach	265
10-4-3	Estimating Output from PV System: Extended Approach	266
10-4-4	Economics of PV Systems	271
10-5	Life-Cycle Energy and Environmental Considerations	275
10-6	Summary	277
	Reference	277
	Bibliography	277
	Exercises	278
11	Solar Thermal Applications	281
11-1	Overview	281
11-2	General Comments	281
11-3	Active Solar Heating Systems	282
11-3-1	Flat-Plate Solar Collectors	282
11-3-2	Evacuated-Tube Solar Collectors	286
11-3-3	Concentrating Collectors	287
11-3-4	Heat Transfer in Flat-Plate Solar Collectors	291
11-3-5	Testing and Rating Procedures for Flat-Plate, Glazed Solar Collectors	293
11-3-6	Heat Exchangers and Thermal Storages	294
11-3-7	<i>f</i> -Chart for System Analysis	296
11-3-8	<i>f</i> -Chart for System Design	300
11-3-9	Optimizing the Combination of Solar Collector Array and Heat Exchanger	305
11-4	Passive Solar Heating Systems	306
11-4-1	General	306
11-4-2	Thermal Comfort Considerations	306
11-4-3	Building Enclosure Considerations	307
11-4-4	Heating Degree Days and Seasonal Heat Requirements	307
11-4-5	Types of Passive Solar Heating Systems	311
11-4-6	Solar Transmission Through Windows	314
11-4-7	Load: Collector Ratio for Analysis	315
11-4-8	Conservation Factor Addendum to LCR Method	320
11-4-9	Load: Collector Ratio Method for Design	323

	11-4-10	Passive Ventilation by Thermal Buoyancy	323
	11-4-11	Designing Window Overhangs for Passive Solar Systems	325
	11-5	Summary	327
		References	327
		Bibliography	327
		Exercises	328
12		Wind Energy Systems	331
	12-1	Overview	331
	12-2	Introduction	331
		12-2-1 Components of a Turbine	334
		12-2-2 Alternative Turbine Designs: Horizontal versus Vertical Axis	337
	12-3	Using Wind Data to Evaluate a Potential Location	337
		12-3-1 Using Statistical Distributions to Approximate Available Energy	340
		12-3-2 Effects of Season and Height on Wind Speed	344
	12-4	Estimating Output from a Specific Turbine for a Proposed Site	345
		12-4-1 Rated Capacity and Capacity Factor	348
	12-5	Turbine Design	348
		12-5-1 Theoretical Limits on Turbine Performance	349
		12-5-2 Tip Speed Ratio, Induced Radial Wind Speed, and Optimal Turbine Rotation Speed	353
		12-5-3 Analysis of Turbine Blade Design	356
		12-5-4 Steps in Turbine Design Process	362
	12-6	Economics of Wind Power	363
		12-6-1 Comparison of Large- and Small-Scale Wind	365
	12-7	Summary	366
		References	366
		Bibliography	367
		Exercises	367
13		Transportation Energy Technologies	371
	13-1	Overview	371
	13-2	Introduction	371
		13-2-1 Definition of Terms	374
		13-2-2 Endpoint Technologies for a Petroleum- and Carbon-Free Transportation System	374
		13-2-3 Competition between Emerging and Incumbent Technologies	378
	13-3	Vehicle Design Considerations and Alternative Propulsion Designs	380
		13-3-1 Criteria for Measuring Vehicle Performance	380
		13-3-2 Options for Improving Conventional Vehicle Efficiency	385

13-4	Alternatives to ICEVs: Alternative Fuels and Propulsion Platforms	386
13-4-1	Battery-Electric Vehicles	386
13-4-2	Hybrid Vehicles	391
13-4-3	Biofuels: Transportation Energy from Biological Sources	399
13-4-4	Hydrogen Fuel Cell Systems and Vehicles	407
13-5	Well-to-Wheel Analysis as a Means of Comparing Alternatives	415
13-6	Summary	417
	References	417
	Bibliography	418
	Exercises	419
14	Systems Perspective on Transportation Energy	421
14-1	Overview	421
14-2	Introduction	421
14-3	Ways of Categorizing Transportation Systems	423
14-4	Influence of Transportation Type on Energy Requirements	425
14-5	Units for Measuring Transportation Energy Efficiency	426
14-6	Recent Trends and Current Assessment of Energy Use in Transportation Systems	428
14-6-1	Passenger Transportation Energy Trends and Current Status	431
14-6-2	Freight Transportation Energy Trends and Current Status	435
14-7	Applying a Systems Approach to Transportation Energy	439
14-7-1	Modal Shifting to More Efficient Modes	439
14-7-2	Rationalizing Transportation Systems to Improve Energy Efficiency	448
14-8	Understanding Transition Pathways for New Technology ...	451
14-9	Toward a Policy for Future Transportation Energy from a Systems Perspective	456
14-9-1	Metropolitan Region Energy Efficiency Plan	456
14-9-2	Allocating Emerging Energy Sources and Technologies to Transportation Sectors	457
14-10	Summary	460
	References	460
	Bibliography	460
	Exercises	461
15	Conclusion: Creating the Twenty-First Century Energy System ...	465
15-1	Overview	465
15-2	Introduction: A Parable about Development	465
15-2-1	Summary of Issues Facing Energy Systems	467

15-2-2	Energy Issues and the Contents of This Book: Motivations, Techniques, and Applications	468
15-2-3	Other Emerging Technologies Not Previously Considered	472
15-3	Pathways to a Sustainable Energy Future: A Case Study	476
15-3-1	Baseline Scenario Results	478
15-3-2	Other Possible Scenarios	479
15-3-3	Discussion	480
15-4	The Role of the Energy Professional in Creating the Energy Systems of the Future	485
15-4-1	Roles for Energy Professionals Outside of Formal Work	486
15-5	Summary	488
	References	488
	Bibliography	489
	Exercise	489
A	Perpetual Julian Date Calendar	491
B	Thermodynamic Tables—Metric Units	493
C	Thermodynamic Tables—U.S. Customary Units	505
	Index	517
