Machining with Nanomaterials

 Springer

Contents

1. Fundamentals of Machining	1
1.1 Introduction	1
1.2 Machining Effects	2
1.3 Size Effects in Machining	17
1.4 Nanomachining	18
References	36
2. Machining Stability	39
21 Introduction	39
22 Phase Difference and Machining Stability	41
23 Sensitivity Analysis of the Phase Difference	44
24 Verification of Phase Stability	51
25 Conclusions	59
References	61
3. Machining Chatter Suppression	67
31 Introduction	67
32 Non-linear Chatter Model	71
33 Characteristic Equation of SSV Cutting	72
34 Stability Increment by SSV Cutting	76
35 Determination of SSV Stability Increment	80
36 Selecting SSV Amplitude from Energy	83
37 Conclusions	93
References	93
4. Micromachining from a Materials Perspective	97
4.1 Introduction	97
4.2 Machining Theory	97
4.3 High-Speed Machining	107
4.4 Cutting Tool Wear	116
4.5 Tool Coatings	125
4.6 Micromachining	145
4.7 Meso Machine Tool Design	156
4.8 Future Applications	159
References	161

5. Machining Brittle Materials Using Nanostructured Diamond Tools	169
5.1 Introduction	169
5.2 Mechanisms of Tool Wear	170
5.3 Machining Simulations	173
5.4 Experimental Methods	184
5.5 Discussion	194
5.6 Conclusions	197
References	198
6. Analysis of Contact Between Chip and Tool Using Nanostructured Coated Cutting Tools	199
6.1 Introduction	199
6.2 Computational Analysis of Machining	200
6.3 Finite Element Studies of Machining	218
6.4 Discussion	225
References	226
7. Economic Analysis of Machining Using Nanostructured Coated Cutting Tools	229
7.1 Introduction	229
7.2 Experimental Apparatus	235
7.3 Experimental Results	235
7.4 Conclusions	256
References	256
8. Analysis of Machining Hardened Steels Using Coated Cutting Tools	259
8.1 Introduction	259
8.2 Computational Analysis	260
8.3 Experimental Analysis	283
8.4 Discussion	294
References	295
9. Formation of Nanostructured Metals	297
9.1 Introduction	297
9.2 Chip Formation	299
9.3 Experimental Procedure	309

9.4	Discussion	320
	References	323
10.	Manufacture and Development of Nanostructured Diamond Tool	325
10.1	Introduction	325
10.2	Analysis of Stress in a Loaded Wedge	328
10.3	Analysis of Stress in a Wedge with a Distributed Load	336
10.4	Experimental Methods	345
10.5	Discussion	348
	References	357
	Subject Index	361
	About the Editors	367
