

Second Edition

Kumar / Purohit

Plant Physiology

Fundamentals and Applications

DETAILED CONTENTS

CHAPTER 1

Plant Physiology: Fundamentals and Applications1

Fundamentals.....	1
Applications	4

CHAPTER 2

The Plant Cell: A Symphony Epitomized.....6

Prokaryotic Plan	6
Eukaryotic Plan	6
Mesokaryotic plan	9
The Plant Cell.....	10
Cell Wall.....	10
Function of Cell Wall	11
Protoplast.....	13
Cytoplasm.....	13
Plasma Membrane.....	13
Cytosomes	17
Endoplasmic Reticulum.....	17
Types of Endoplasmic Reticulum.....	17
Golgi Complex	19
Ultra structure.....	19
Chemical composition of Golgi complex.....	20
Functions of Golgi Complex.....	20
Microbodies.....	20
Lysosomes.....	20

Sphaerosomes.....	21
Peroxisomes	22
Glyoxysomes.....	22
Lomasomes	23
Vacuoles.....	23
Ribosomes	24
Types of Ribosomes	24
Mitochondria	26
Plastids	27
The Chloroplasts	28
The Functions of Chloroplast.....	28
Number.....	28
Structure.....	29
Nucleus.....	30
Microtubules or Microfilaments.....	32

CHAPTER 3

Biophysics: Basic Concepts.....33

Covalent Bonds	33
Ionic Bonds	35
Hydrogen Bonds.....	36
Oxidation-Reduction	36
Inorganic Compounds	37
Bioenergetics.....	37
Nature of Energy and its Measurements.....	37
Chemical Energy	38
Free Energy.....	39
Requirements of Bioenergetic System	39
Scheme of Bioenergetics	39

Oxidation-Reduction Potential	41
Plant Growth: Modeling	43
<i>Models on Crop Physiology and</i>	
<i>Morphology</i>	44

CHAPTER 4

Water Relations: The Dynamic

Scenario	48
Introduction	48
Water: Sources	49
<i>Atmospheric water</i>	49
<i>Surface water</i>	49
<i>Stored water</i>	49
<i>Ground water</i>	49
Water in Soil	50
Plant, Water and Soil	50
<i>Functions of Water in Plants</i>	51
Cellular Water	52
Water: Physicochemical Properties	52
<i>Polar Properties of Water</i>	52
<i>Properties of Water as a Solvent</i>	52
<i>Cohesive and Adhesive Forces</i>	53
<i>Temperature Stabilization</i>	53
<i>Water and Surface Tension</i>	
<i>Property</i>	54
Water: Chemistry	54
<i>Acid and Bases</i>	54
<i>Hydrogen Ion Concentration</i>	
<i>(pH or Potentia hydrogenii)</i>	54
<i>Redox Potential</i>	55
<i>Electrical Conductivity (EC)</i>	55
<i>Water Potential</i>	55
How do Materials Pass Through	
Membranes?	56
<i>Properties of Cell Membrane</i>	56
Diffusion	56
<i>Diffusion: Rate</i>	56
<i>Diffusion in Cytoplasm</i>	57
Types of Membranes	58
Selective Permeability and Diffusion	58
Osmosis	59
<i>Significance of Osmosis in Plants</i>	60
Osmotic Pressure	60
<i>Osmotic Pressure: Methods of</i>	
<i>Measurement</i>	61
Osmotic Relations of a Plant Cell	62
Diffusion Pressure Deficit or Suction	
Pressure	62

<i>Measurement of Suction Pressure</i>	
<i>or Diffusion Pressure Deficit</i>	63
Water Relations of an Individual	
Plant Cell (Old and New	
Terminology)	63
Water Relations of the Whole Plant	67
Measuring the Components of Water	
Potential	67
<i>Water Potential</i>	68
<i>Relative Humidity (RH)</i>	69

CHAPTER 5

Absorption of Water and Mineral Elements by Plants.....70

Introduction	70
Water Uptake by the Root	70
The Driving Force for Water	
Movement	72
Water Uptake: Root Age	73
Xylem	74
<i>Xylem Vessel</i>	74
Cohesion Theory	75
Passive and Active Transport of	
Solutes	77
<i>Which Carriers are Involved in</i>	
<i>Solute Transport?</i>	78
<i>Accumulation of Solutes Inside</i>	
<i>Cells</i>	78
<i>Solutes Absorption is Specific and</i>	
<i>Selective</i>	78
<i>Slow Leakage or Efflux of Absorbed</i>	
<i>Solutes</i>	79
<i>The Rate of Solute Absorption</i>	80
<i>How Solutes Cross Membranes</i>	80
<i>Possible Overall Mechanisms for</i>	
<i>Solute Absorption</i>	80
<i>How ATPase Pumps Transport</i>	
<i>Protons and Calcium?</i>	80
<i>How Carriers and Channels Speed</i>	
<i>Passive Transport?</i>	81
<i>Correlation's Between Root and</i>	
<i>Shoot Functions in Mineral</i>	
<i>Absorption</i>	82
<i>Physiological Limitations on</i>	
<i>Internal Transport and Use</i>	82
<i>Inter-organ Transport of Nutrients</i>	82

CHAPTER 6

The Ascent of Sap Realm of Hypotheses.....84

Water Movement in the Leaf.....	84
Root Pressure.....	84
<i>Root Pressure is the Metabolic Activity</i>	85
<i>Root Pressure as Subsidiary Force</i>	86
Vital Theories.....	86
<i>Objections to Vital Theories</i>	87
Root Pressure Theory.....	87
<i>Objection to Root Pressure Theory</i>	87
Physical Force Theories.....	88
<i>Imbibitional Theory</i>	88
<i>Atmospheric Pressure Theory</i>	88
Cohesion - Tension Theory or Transpiration Pull Theory.....	88
<i>Driving Force</i>	88
<i>Hydration Force</i>	89
<i>Cohesion Force</i>	89
<i>Tensile Strength of Water</i>	90
<i>Demonstration of Cohesion-tension Theory</i>	90
Flow Velocities and Continuous Water Columns Really.....	91
Pressure Bomb Method.....	91

CHAPTER 7

Organic Transport in Plants.....92

Translocation Occurs in the Phloem.....	93
<i>Ring Experiment</i>	93
<i>Radioactive Tracers Technique</i>	93
<i>The Aphid Technique for Analysis of Phloem Sap</i>	93
Characteristic Features of Sieve Elements.....	94
Phloem Transport: Biochemical Aspects.....	95
<i>Biochemical Reactions Involved in Loading of the Sieve Elements</i>	95
<i>The Biochemical Capacity of the Sieve Tubes</i>	95
Phloem Loading and Unloading.....	96
Phloem Translocation: Mechanisms.....	97

Translocation Mechanism: Models.....	97
Translocation Between Sources and Sinks.....	101
<i>Movement into Sinks</i>	101
<i>The Effect of Growth Substances</i>	102

CHAPTER 8

Transpiration: A Queer

Navigation.....	103
The Nature of Transpiration.....	106
Transpiration Rate: Measurement.....	107
Transpiration Path.....	107
<i>The Non-stomatal External Diffusion Path</i>	107
<i>Stomatal Path</i>	107
<i>The Non-stomatal Internal Diffusion Path (Mesophyll Resistance)</i>	107
<i>Relative Magnitude of the Parts of the Diffusion Path</i>	108
<i>Measurement of Stomatal Aperture</i>	109
<i>Estimation of Stomatal Index and Stomatal Frequency with Replica Method</i>	110
Structure of Stomata.....	111
<i>Microscopic Anatomy of Guard Cells</i>	111
<i>Stomata: Number and Density</i>	111
<i>Internal Air of the Leaf</i>	111
<i>Stomatal Complex: Development</i>	112
<i>Elliptic type</i>	112
<i>Gramineaceous type</i>	112
Stomata : Development.....	113
<i>Development of Stomatal Complexes</i>	113
Organelles of Guard Cells.....	115
<i>Plastids of guards cells</i>	115
<i>Nuclei of guard cells</i>	115
<i>Mitochondria of guard cell</i>	116
<i>Sphaerosomes in guard cells</i>	116
<i>Other inclusions of guard cells</i>	116
Development of Guard Cells.....	116
<i>Thickening in Guard Cells</i>	116
<i>Stoma Formation</i>	116
<i>Elliptic guard cells</i>	116
<i>Gramineaceous guard cells</i>	117
Stomatal Mechanics.....	118
<i>Plasmodesmata and Ectodesmata</i>	118

Substomatal Ion-adsorbent Bodies.....	119
Stomata : Significance.....	119
Stomatal Movement : Control	119
Mechanism of Stomatal Movement.....	121
Starch Sugar Hypothesis - Old	
Concept.....	121
Metabolic Reactions Involved in	
Stomatal Movement.....	122
Modern Concept.....	122
Ion Transport.....	122
Malate Switch Hypothesis	122
Fusicoccin and Stomatal Movement.....	124
Energy Relationship and Stomatal	
Movement	125
Role of Cyclic Photophosphorylation	125
Role of Absciscic Acid in Stomatal	
Movement.....	126
ABA, Chloroplast Membrane and	
pH Gradient in Chloroplast.....	126
ABA, Water potential and	
Photosynthesis.....	127
ABA and Photosynthetic Efficiency.....	128
Sensitivity to ABA and Control of	
Stomatal Movement	128
Calcium - ABA Second Messenger	
Model	129
Calmodulin	130
Possible Involvement of cAMP in	
Stomatal Movement	130
Concept of Hormonal Balance	131
Stomatal Movement and	
Antitranspirants	132
Antitranspirant Films	132
Use of Antitranspirant Films.....	132
Which Antitranspirant is Safe.....	133
Antitranspirants: Synthetic.....	133
Antitranspirants: Naturally-	
occurring	134
Farnesol.....	135
Metabolic Poisons.....	136
Which Factor(s) is Responsible for	
Stomatal Movement?.....	136
Guard and Subsidiary Cell.....	137
CO ₂ Concentration and CAM	
Plants.....	137
Light and Dark	138
pH and Active Water Movement.....	138
Water Balance of the Plant.....	138
Silicon and Transpiration.....	138

Drought and Related Stress	
Conditions and Stomatal Response	139
Hydroactive and Hydropassive	
Responses of Stomata	139
Short Term Coordination of	
Stomatal Responses.....	140
Overriding Other Signals	140
ABA and Stomatal Heterogeneity.....	140
Roots send Signals to the Shoot and	
Control of Stomatal Movement.....	141
Drying Leaf and Stomatal	
Movement	141
Oxygen-deficient roots and	
Stomatal Movement.....	141
Stomatal Movement Under Salt	
Stress	142
Stomatal Response: Evolutionary	
and Ecological Perspective.....	142
Guttation.....	142
Bleeding	143
Wilting	143
Permanent Wilting Point (PWP).....	144
Ultimate Wilting Point (UWP)	144

CHAPTER 9

Mineral Nutrition The

Inorganic Support.....145

Introduction.....	145
Mineral Elements: General Functions	146
Nutrient Depletion in Soil and Plant	
Growth	147
Methods of Studying Plant Nutrition:	
Solution Cultures.....	149
Nutrient Solutions	150
Chelating Agents	150
Hydroponics	151
Properties of Root Surface	151
Mycorrhizae: Special method for	
Obtaining Essential Elements.....	152
Essential and Dispensable Elements	154
Essential Nutrient Elements	155
Nutrient Deficiency Symptoms and	
Functions of Essential Nutrient	
Elements.....	155
Nitrogen	156
Phosphorus	156
Calcium	157
Calmodulin	158

Magnesium	159
Potassium	159
Sulfur	159
Iron	160
Manganese.....	161
Copper	161
Zinc.....	161
Boron.....	162
Molybdenum	163
Silicon.....	163
<i>Silicon and Plant Growth</i>	163
Metal Toxicity in Plants	164
Carbon	165
Aluminium Toxicity	166
Manganese Toxicity	168
Iron Toxicity.....	168
Other Metal Toxicities.....	169
Phytotoxicity	169
Mineral Nutrition and Crop	
Productivity	170
Role of Nutrition in Apical	
Dominance	170

CHAPTER 10

Enzymes: Bioaccelerators	171
Historical Background.....	171
Properties of Enzymes.....	172
Enzymes: Nomenclature.....	173
Enzyme Classification	173
<i>Hydrolysing enzymes</i>	174
Enzymes as Chemo-thermo	
Regulators.....	174
What Enzymes Do?.....	175
What is Enzyme Kinetics?	176
How Enzymes Work	176
Enzymatic Action: Regulation	177
Enzyme Optima.....	178
Michaelis-Menten constant (Km).	
value : Significance	178
Inhibitors, Activators and Inactivators	
of Enzymes	178
Reversible and Irreversible Inhibition	179
Multi-substrate Enzymes	179
Enzyme Secretion by Plant Cells.....	180
The Mechanism of Protein Secretion	180
The Control of Secretion	180
Hormonal Effects on Enzyme	
Secretion	181

Allostery and its Antecedents.....	181
Isoenzymes	181
The Cause of Enzyme Multiplicity.....	182
Primary or Genetic Isoenzymes	182
<i>Isoenzymes due to multiple alleles</i>	
<i>at a single genetic locus</i>	182
Isoenzymes due to Multiple Genetic	
Loci	182
Secondary or Post-translational	
Isoenzymes	183
Apparent Enzyme Multiplicity	183
Isoenzymes as Genetic Markers	184

CHAPTER 11

Visible Radiations and

Photosynthesis.....185

Basic Concepts	185
<i>Visible Radiations Have</i>	
<i>Characteristics of Both a Particle</i>	
<i>and a Wave</i>	185
<i>Working With Light</i>	187
<i>Photosynthetically Active Radiation</i>	
(PAR).....	188
<i>When Molecules Absorb or Emit</i>	
<i>Light, They Change Their</i>	
<i>Electronic State</i>	189
<i>The Quantum Yield Gives</i>	
<i>Information About the Fate of the</i>	
<i>Excited State</i>	191
<i>Photosynthetic Pigments Absorb the</i>	
<i>Light That Powers Photosynthesis</i>	191
<i>Photosynthesis Takes Place in</i>	
<i>Complexes Containing Light-</i>	
<i>Gathering Antennas and</i>	
<i>Photochemical Reaction Centers</i>	192
<i>Action and Absorption Spectra</i>	194
<i>Absorption Spectrum</i>	195
<i>Leaf Reflectance</i>	195
<i>Action Spectra</i>	195
<i>Difference Spectra</i>	196
<i>De-excitation</i>	197
<i>Chlorophyll Fluorescence</i>	197
<i>Energy Transfer</i>	198
Photochemistry	199
<i>Photochemical Quenching</i>	199

CHAPTER 12

Proteomics and Genetics of Photosynthetic Apparatus.....	200
Plastids	200
<i>The Multifunctional Chloroplast</i>	<i>200</i>
<i>Number</i>	<i>201</i>
<i>Other Inclusions</i>	<i>201</i>
<i>Membrane System of Chloroplast.....</i>	<i>201</i>
Transport System of Chloroplast	
Membrane.....	202
<i>Exchange of ions and metabolites</i>	<i>203</i>
Chloroplast DNA.....	204
<i>Chloroplast Ribosomes.....</i>	<i>204</i>
Plastid Genetics	205
<i>Proteomics of Chloroplasts</i>	<i>205</i>
<i>Consensus Sequences and Prediction of Localization and Cleavage Sites</i>	<i>207</i>
Plastid Inheritance	208
Plastid Ultra Structure	208
<i>Proplastids.....</i>	<i>208</i>
Plastid Development and Functions	208
<i>Chloroplast Development</i>	<i>208</i>
<i>Integration of Plastid and Cell Function.....</i>	<i>210</i>
<i>Plastid Genome</i>	<i>211</i>
<i>DNA Copy Number and Localization.....</i>	<i>214</i>
<i>Plastid Genome : Decoding.....</i>	<i>214</i>
<i>Plastid Genome : RNA Processing.....</i>	<i>215</i>
<i>Plastid Genome : Introns.....</i>	<i>216</i>
<i>Nuclear Genes Encoding Plastid Proteins</i>	<i>216</i>
Photosynthetic Pigments	216
Properties of Chlorophyll Molecule	218
<i>Chlorophyll Synthesis.....</i>	<i>220</i>
<i>Physical Properties of Chlorophylls.....</i>	<i>220</i>
Photopigments : Functions	221
<i>Type of Biological Photoprocess.....</i>	<i>221</i>
Photopigments: Properties.....	222
<i>Chlorophylls</i>	<i>222</i>
<i>Carotenoids</i>	<i>224</i>
<i>Phycobiliproteins.....</i>	<i>225</i>
Flavoproteins	225

CHAPTER 13

Photosystems in Chloroplast.....	226
Emerson Enhancement Effect	226
Red Drop Effect	227
Photosystems.....	227
<i>Light Harvesting Complex (LHC)</i>	<i>229</i>
Photosystem II.....	230
<i>PS II Reaction Centre.....</i>	<i>231</i>
<i>Location, Structure and Function</i>	<i>232</i>
<i>Location and Geometry of Mn Cluster.....</i>	<i>234</i>
<i>Charge Donor and Acceptor Components of PS II.....</i>	<i>234</i>
<i>Photochemistry.....</i>	<i>234</i>
Role of Cyt b 559	235
<i>Mechanism of Oxygen Evolution in PS II.....</i>	<i>235</i>
Kok's Oxygen Clock.....	235
The Photosystem II oxygen-evolving reaction	237
<i>Role of Ions Other than Manganese during Evolution of Oxygen</i>	<i>238</i>
<i>Extrinsic 33 KD and Oxygen Evolving Polypeptide.....</i>	<i>239</i>
Photosystem I	240
Photosystem I: Functions	243
<i>Linear Electron Transfer in PS I.....</i>	<i>243</i>
<i>Interactions on the oxidizing side.....</i>	<i>244</i>
<i>Electron carriers of the PS I complex.....</i>	<i>244</i>
<i>Interactions on the reducing side</i>	<i>246</i>
<i>Cyclic Electron Transfer</i>	<i>246</i>
<i>The Catalytic Subunits.....</i>	<i>246</i>
<i>The Docking Subunits.....</i>	<i>247</i>
<i>Other Proteins of Photosystem I</i>	<i>247</i>
The Cytochrome b _f Complex: The Q Cycle	248

CHAPTER 14

Bacterial Photosynthesis	251
Nutrient Requirements for Microbial Growth	251
Autotrophic or Autophytic Bacteria	253
<i>Photosynthetic or Photoautotrophic Bacteria.....</i>	<i>253</i>
Photosynthesis in Bacteria and Cyanobacteria.....	253

Purple Non-sulphur Bacteria.....	254
<i>Photosynthetic Apparatus of Purple</i>	
<i>Bacteria</i>	255
<i>Purple Bacteria: Electron</i>	
<i>Transport Chain</i>	255
Green Bacteria.....	256
<i>Photosynthetic apparatus of Green</i>	
<i>bacteria</i>	256
Biochemical Reactions of	
Photosynthesis (Dark Reaction).....	256
<i>The Reductive Pentose Phosphate</i>	
<i>(RPP) or Calvin Cycle:</i>	
<i>Carboxylation Phase</i>	257

CHAPTER 15

Path of Carbon.....258

Supply and Demand of CO ₂ in	
Photosynthetic Process.....	258
CO ₂ Response Curve.....	259
CO ₂ – Stomatal and Boundary	
Layer Conductances.....	259
Carbon: Principles of Methodology.....	259
Method.....	260
The Reductive Pentose Phosphate	
(RPP) or Calvin Cycle.....	261
Carboxylation Phase.....	262
Reduction Phase.....	263
Regeneration Phase.....	263
RuBisCO: Structure and Function.....	265
Activation of RuBisCO.....	266
Catalysis by RuBisCO.....	267
Fallover of Rubisco.....	267
Carboxyarabinitol 1-Phosphate.....	267
Carbonic Anhydrase.....	268
Light Activation of Photosynthetic	
Enzymes.....	268
Regulation of the RPP Cycle.....	268
Thioredoxin.....	269
C ₄ Cycle (Hatch and Slack Cycle).....	269
C ₄ Plants.....	270
Sucrose Synthesis in Cytosol.....	275
Intracellular Transport in C ₄ Plants	
During Photosynthesis.....	276
Phosphate Translocator.....	276
Pyruvate Translocator.....	276
Oxaloacetate Translocator.....	278
Dicarboxylate Translocator.....	278
Glycerate Translocator.....	278

Intermediate between C ₃ and C ₄	
plants.....	278
C ₄ Species: Evolution and	
Distribution.....	279
Breeding of C ₃ and C ₄ Plants.....	279
C ₂ Plants?.....	280

CHAPTER 16

CAM Plants.....281

Distribution and Evolution of CAM	
Species.....	282
Carbon Isotope Composition of CAM	
Species.....	282
Anatomical, Physiological and	
Biochemical Adaptations.....	282
Phase I.....	285
Phase II.....	285
Phase III.....	285
Phase IV.....	285
Similarities Between CAM and C ₄	
Plants.....	289
Incomplete and Facultative CAM	
Plants.....	289
CAM idling.....	289
CAM Cycling.....	289
Incomplete and Facultative CAM	
Plants.....	289
Environmental Factors and CAM	
Plants.....	290
Temperature Sensitivity.....	290
Plants Growing in Shade or Below	
Forest Canopy.....	290
Environmental Factors and	
Structural Changes.....	290
Water-Use Efficiency.....	291
Ecological Significance.....	291

CHAPTER 17

The Photorespiratory Carbon Oxidation Cycle.....292

Photorespiration: Measurement.....	293
Photorespiration Biological Function	
is Unknown.....	294
Photorespiration: Metabolism.....	295
Evidence for Glycolate as the	
Substrate for Photorespiration.....	295

Metabolism of Glycolate by the Peroxisomes	297
<i>Metabolism of Glycine by the Mitochondria</i>	297
<i>Conversion of Serine to Carbohydrate</i>	299
Photorespiration and Crop Plants	299
<i>Partial Recovery of Fixed Carbon</i>	299
<i>Competition between Carboxylation and Oxygenation</i>	300
<i>Interlocking of Carboxylation and Oxygenation</i>	300
<i>Further Metabolism of Glycolate</i>	301
Photorespiration: Energetics	301

CHAPTER 18

Respiration: The Second Energy Transduction	302
Introduction	302
Adenosine Triphosphate: The Energy Currency	303
Release of Energy Through Biological Oxidation	303
A Metabolic degradation	304
Glycolysis	304
<i>Energy Balance Sheet of Glycolysis</i>	305
Citric Acid Cycle	307
<i>Formation of Citric Acid</i>	307
<i>Regeneration of Oxaloacetic Acid</i>	307
<i>Four Oxidation Steps in the Krebs Cycle</i>	307
<i>Formation of ATP</i>	309
<i>Decarboxylation</i>	309
<i>Balance Sheet</i>	309
The Respiratory Chain	309
Mitochondria as Power Plants	311
<i>Location of Respiratory Chain</i>	311
The Intramitochondrial Location of Enzymes	313
<i>The Inner and Outer Mitochondrial Membranes are Structurally and Functionally Different</i>	314
<i>Enzymes and Small Molecules Involved in the Citric Acid Cycle</i>	315
<i>Use of Molecular Oxygen</i>	315
Inner-Membrane Proteins	316
Metabolic Regulation	316
Uncoupling of Respiratory Control	316

Energy Metabolism in Bacteria	317
Respiration in Roots	317
<i>Pneumatophores</i>	317

CHAPTER 19

Nitrogen Metabolism From Bricks to Building	318
Introduction	318
Nitrogen: Source	319
<i>Inorganic nitrogen</i>	319
<i>Organic nitrogen</i>	319
<i>Molecular nitrogen</i>	319
Nitrogen Fixation: Physical	320
Requirements of Nitrogen Fixation	322
Nitrogen Converters in the Soil	
Nitrogen Cycle	322
Nitrogen Fixation: Symbiotic	323
Formation of Nodule in Leguminous Plants	324
<i>Nitrogen Fixing Organisms found in Nodules</i>	324
Structure and Function of Nodule	325
<i>Leghaemoglobin</i>	325
<i>Site of Nitrogen Fixation in Nodules</i>	327
<i>Mechanism of Nitrogen Fixation in Legumes</i>	327
<i>Theory of Virtanen</i>	327
<i>Theory of Burris and Wilson</i>	328
Nitrogen Converters in the Soil	328
<i>Cyanobacteria and Nitrogen fixation</i>	329
<i>Nitrogen Fixing Fungi</i>	329
Biochemical Aspects of Diazotrophy	330
<i>Nitrogenase Producing E. coli Cells</i>	330
Genetics of Free-living and Symbiotic Diazotrophs	331
<i>Organization of Nitrogen-fixation Genes</i>	331
<i>nod-Genes for Nodulation</i>	333
Regulation of Nitrogen-fixation Genes	333
Genetics of Symbiotic Diazotrophs	334
Transfer of Nif-genes to Microorganisms	334
<i>Transfer of Nif-genes and Development of New Nitrogen-fixing plants</i>	334
Nitrogen Fixation Research in India	336

Biochemistry of N ₂ Fixation	337	Auxin Receptors.....	365
Transport of Fixed Nitrogen to the		Membrane-Bound Auxin Receptors.....	366
Host Plant.....	337	Soluble Auxin Receptors.....	366
Assimilation of Ammonia.....	337	Gibberellin Receptors.....	366
Amino acids and Amides	337	Cytokinin Receptors	367
Biosynthesis of Aminoacids	338	ABA Receptors.....	367
Degradation of Aminoacids.....	339	Ethylene Receptors	367
Amides	339	Plant Hormone Conjugates.....	368
Biosynthesis of Amides	340	Calcium pump and H ⁺ /Ca ²⁺	
Protein	340	antiporter	371
Types of Proteins	340	Plasma membrane	371
Derived Proteins.....	341	Endoplasmic reticulum.....	371
Protein: Structure.....	342	Vacuole	371

CHAPTER 20

Growth of the Green Plants.....344

Introduction	344	Mitochondrion.....	371
Why Growth Occurs?	345	Chloroplasts	372
Kinetics of Growth or Measurement		Ca ²⁺ channels	372
and Pattern of Growth	345	Phosphatidylinositol turnover	372
What Happens When Growth		Inositol phospholipids and inositol	
Occurs?.....	346	phosphates	373
Dry Matter Accumulation.....	347	Phosphatidylinositol and	
Age and Plant Growth	348	phosphatidylinositol 4-phosphate	
Leaf Area Expansion	348	kinase.....	373
Leaf Area Index (LAI).....	348	Phospholipase C.....	373
Plant Height	349	Hydrolysis of inositol 1,4,5-	
Root Growth	349	triphosphate.....	373
Growth Analysis	349	Inositol ,4,5-triphosphate-induced	
Crop Growth Rate	349	Ca ²⁺ released from intracellular	
Relative Growth Rate (RGR).....	350	stores	373
Net Assimilation Rate	350	Physiological responses involving	

CHAPTER 21

Plant Growth REGULATORS.....351

Status and Definition	351	Physiological Effects	377
Plant Hormones.....	351	Reduction in vegetative growth	379
Other plant compounds which		Growth reduction in ornamental	
affect growth.....	355	species	381
Other growth regulators.....	358	Regulation of turf growth	381
How Hormone Acts?	359	Chlorophyll biosynthesis and	
Influence of Hormones on Nucleic		photosynthesis	381
Acid and Protein Metabolism.....	360	Carbohydrate content, metabolism	
Influence of Plant Hormone On		and translocation.....	382
Gene Expression.....	361	Water relations.....	382
Secondary Messenger Hypothesis	362	Stress tolerance	382
Hormone Receptor Concept	363	Senescence	382
		Improvement of canopy structure	
		and yield in oilseeds	382
		Improving the quality of seedlings	
		used for transplanting	382

<i>Resistance against climatic stress</i>	383
<i>Resistance against fungal infections</i>	383
Growth retardants and biosynthetic pathways.....	383
<i>Sterol formation</i>	383
Gibberellic acid biosynthesis.....	383
<i>Inhibitors in mevalonic acid to ent-kaurene</i>	383
<i>Inhibitors in kaurene to kaurenoic acid</i>	384
<i>Metabolism of ABA</i>	385
<i>Interference with other phytohormones</i>	385

CHAPTER 22

Auxins	395
History of Auxin Research	395
<i>Free auxins</i>	395
<i>Bound auxins</i>	395
Chemical Nature of Auxin and Biological Activity	397
<i>Site of Synthesis</i>	398
Techniques of Auxin Bioassay	398
<i>Avena Curvature Test</i>	398
<i>Avena Section Test</i>	398
<i>Cross Root Inhibition Test</i>	399
Transport	400
Accumulation of Auxin	400
Biosynthesis	401
Metabolism of IAA	402
Conjugates of IAA	402
Destruction of Auxin.....	402
<i>Enzymatic Oxidation of Auxin</i>	403
<i>Photooxidation of Auxin</i>	403
Mechanism of Action	403
<i>Nature of Wall Loosening Signals</i>	403
Membrane and Ion Movement Leading to Media Acidification.....	405
<i>Mechanism Media Acidification</i>	406
<i>Nucleic acid and Protein Changes</i>	406
<i>Changes in Wall Plasticity</i>	406
<i>Secondary Messenger Hypothesis</i>	406
<i>Composite Model?</i>	406
<i>Theologis Model</i>	407
<i>Coleoptile and Stem Growth</i>	407
<i>Cell Elongation</i>	408
<i>Secondary Growth</i>	408
<i>Rooting of Cuttings</i>	408

<i>Apical Dominance</i>	409
<i>Parthenocarp</i>	409
<i>Fruit Size</i>	411
<i>Abscission</i>	411
<i>Respiration and Auxin</i>	413
<i>Organogenesis and Auxin</i>	413
<i>Crown Galls</i>	413
Agricultural Uses of Auxins.....	414
<i>Auxins as Herbicides, Ripeners, and Rooting Inducers</i>	414

CHAPTER 23

Gibberellins	417
History of Gibberellins Research	417
Chemistry of Gibberellins	419
Biosynthesis of Gibberellins	421
Metabolism of GA.....	421
Bioassay	424
Mechanism of Action of GA.....	424
<i>GA and Growth: Role in Cell Division</i>	424
<i>Extensibility Changes in GA₃ Treated Tissues</i>	424
<i>GA₃ and Synthesis of RNA Proteins</i>	425
<i>The Cereal Aleurone Layer</i>	426
<i>Dicotyledonous Fruits and Seeds</i>	426
Physiological Effects and Practical Applications of Gibberellins	427
<i>Floriculture</i>	429
<i>Fruit</i>	429
<i>Protection Against Plant Pathogens</i>	430
<i>Applications on Agronomic Crops</i>	431

CHAPTER 24

Cytokinins Juvenile Hormones	432
Historical Background	432
Chemical Nomenclature	434
<i>Cytokinin levels in leaves and xylem sap</i>	435
Physiological Effects of Applied Cytokinins	435
Biosynthesis of Free Cytokinins	435
<i>Biosynthesis via tRNA turnover</i>	435
<i>De novo Biosynthesis</i>	435
<i>Site of CK Biosynthesis</i>	436
Cytokinin Metabolism.....	436

Role of Cytokinins in Plant Development	436
Seed Germination and Early Seedling Growth	437
Cotyledon Expansion	437
Chlorophyll Synthesis	437
Cell Division and Organ Differentiation	437
Control of Leaf Senescence	438
Root-Shoot Interactions	439
Mode of Action of Cytokinin	439
Cytokinin-dependent plastid development	440
Practical Uses of Cytokinins	440
Mixture of BA and GA ₄₊₇	440
Fascicular Bud Break in Conifers	440
Extension of Vegetable Shelf-life	441
Commercial Uses of Cytokinin-like Activity Compounds	441
Thinning of Apples	441
Agronomic Crops	441

CHAPTER 25

Absciscic Acid	442
Introduction	442
Discovery and Characterization	442
Distribution of ABA in Nature	443
Chemistry of ABA	443
Techniques	444
Bioassay of ABA	444
Translocation of ABA in the Plant	445
Biosynthesis of ABA	445
In Fungi	445
Biosynthesis in Higher Plants	446
Carotenoid Biosynthetic Inhibitor	447
Wilty or Droopy Mutants Deficient in ABA	448
Physiological Responses of ABA	449
Stomatal Closure and Water Relations	449
Photosynthesis	450
Growth	450
Bud Dormancy	452
Seed Dormancy	452
Abscission	453
Stress, ABA and Abscission	454
Heterophylly	455
Response Mutants	455

Tuberization	456
Senescence	456
Resistance to Frost Damage	456
ABA Receptor Site(s)?	456
Barley Aleurone Cells	456
Developing Embryo	457
Stress, Protein and ABA	457
Water Stress and Chloroplast	458
Mode of Action of ABA	458
DNA, RNA and Protein	459
Synthesis of Enzymes	459
Gene Expression	459
ABA Receptors	461
ABA, Protoplast and Guard Cell	461
Calcium Ions	461

CHAPTER 26

Ethylene: Ripening Hormone	463
History Ethylene Research	463
Ethylene as a Plant Hormone	465
Ethylene Biosynthesis in Higher Plants and its Control	465
Biosynthetic Pathway	465
Ethylene formation in model systems	467
Synthesis in vivo-physiological pathways	467
Regulation of Ethylene biosynthesis	468
Regulation of Ethylene Biosynthesis and Evolution	470
Auxin-induced Ethylene Formation	470
Cyanide and Ethylene Interrelationships	471
Ethylene Binding	471
Analysis of Ethylene	472
Stress and Ethylene Production	472
Disease	472
Gene Expression and Disease Resistance	473
Physical Stress	473
Autocatalytic Ethylene Formation (Ethylene Stress)	473
Ethylene Formation in Soils	473
Abscission	474
Ethylene and Duoyant Density of Plasma Membrane	474
Chlorophyll Degradation	474
Ethylene as a Ripening Hormone	475

<i>Stimulation of Ripening</i>	475	<i>Dicotyledonous and</i>	
<i>Gene Expression, Fruit</i>		<i>Monocotyledonous seeds</i>	488
<i>Development and Ripening</i>	477	<i>Metabolic Status of Seeds</i>	489
<i>Stimulation of Germination</i>	477	<i>Respiration in Developing Seeds</i>	489
<i>Induction of Female Flowers</i>	477	<i>Changes in Sub-cellular Particles</i>	490
<i>Male Sterility</i>	477	<i>Protein Synthesis</i>	490
<i>Prevention of Lodging in Cereals</i>	477	<i>Seed Composition</i>	490
<i>Growth Inhibition</i>	478	<i>Starch Biosynthesis</i>	490
Ethylene Related Plant Growth		<i>Protein Biosynthesis</i>	492
<i>Regulators</i>	478	Biomolecules Present in the Seeds	492
<i>Ethephon</i>	478	<i>Seed Storage Proteins:</i>	
<i>Etacelasil</i>	480	<i>Classification</i>	492
<i>Haloethylsulfonic acids</i>	480	<i>Lipid Biosynthesis in Seeds</i>	493
<i>2-Hydroxyethylhydrazine</i>	480	<i>Mineral Composition of Seeds</i>	493
<i>Others Ethylene Releasing</i>		<i>Vitamin Composition of Seeds</i>	493
<i>Compounds</i>	480	Seed Germination	493
Biochemical Action of Ethylene	480	<i>What is Seed Germination?</i>	493
Molecular Requirement of Ethylene		<i>The Phasic Characters of</i>	
Action	481	<i>Germination</i>	494
Mechanism of Ethylene Action	481	<i>Water Imbibition or Catabolic</i>	
<i>DNA, RNA and Protein</i>		<i>Phases of Germination</i>	495
<i>Biosynthesis</i>	481	<i>Function of Water in germination</i>	495
<i>Ribosomes as a Target</i>	482	<i>Hydration and Enzyme Activation</i>	496
<i>Effect of Ethylene on Gene</i>		Enzymatic Degradation of Storage	
<i>Expression</i>	483	Materials	496
<i>Specific Hormones and their Action</i>	483	<i>Degradation of Carbohydrates</i>	496
Ethylene Receptors	483	<i>Degradation of Proteins</i>	496
Practical Use of Ethylene-Releasing		<i>Degradation of Fat Bodies</i>	496
Compounds	484	<i>Synthesis and Growth of Embryo</i>	498
Growth and Development	484	<i>Endogenous Hormone Level of</i>	
<i>Prevention of Lodging</i>	484	<i>Seeds</i>	498
<i>Carbohydrate Content of the Straw</i>	484	<i>Role of GA in Germination</i>	498
<i>Reduction in Scape Length</i>	484	<i>Do the Hormones Play any Role in</i>	
<i>Reduced Yield and Mean Tuber</i>		<i>the Control of Germination?</i>	498
<i>Size</i>	485	The Hormone Hypothesis	499
<i>Flowering Control</i>	485	<i>The Inhibitor Hypothesis</i>	500
<i>Leaf and Branch Abscission</i>	485	<i>ABA as Inhibitor of Germination</i>	500
<i>Fruit Ripening</i>	485	<i>IAA as Inhibitor of Germination?</i>	500
<i>Fruit Abscission</i>	486	<i>Inhibitor-Promotor Equilibrium</i>	500
Combination with other Chemicals	486	<i>Changes in the Inhibitor-Promotor</i>	

CHAPTER 27

Seed Physiology Dormancy and

Germination487

The Seed	487
Importance of Seeds	487
Phases of Seed Maturation	488
Seed Types	488

<i>Dicotyledonous and</i>	
<i>Monocotyledonous seeds</i>	488
<i>Metabolic Status of Seeds</i>	489
<i>Respiration in Developing Seeds</i>	489
<i>Changes in Sub-cellular Particles</i>	490
<i>Protein Synthesis</i>	490
<i>Seed Composition</i>	490
<i>Starch Biosynthesis</i>	490
<i>Protein Biosynthesis</i>	492
Biomolecules Present in the Seeds	492
<i>Seed Storage Proteins:</i>	
<i>Classification</i>	492
<i>Lipid Biosynthesis in Seeds</i>	493
<i>Mineral Composition of Seeds</i>	493
<i>Vitamin Composition of Seeds</i>	493
Seed Germination	493
<i>What is Seed Germination?</i>	493
<i>The Phasic Characters of</i>	
<i>Germination</i>	494
<i>Water Imbibition or Catabolic</i>	
<i>Phases of Germination</i>	495
<i>Function of Water in germination</i>	495
<i>Hydration and Enzyme Activation</i>	496
Enzymatic Degradation of Storage	
Materials	496
<i>Degradation of Carbohydrates</i>	496
<i>Degradation of Proteins</i>	496
<i>Degradation of Fat Bodies</i>	496
<i>Synthesis and Growth of Embryo</i>	498
<i>Endogenous Hormone Level of</i>	
<i>Seeds</i>	498
<i>Role of GA in Germination</i>	498
<i>Do the Hormones Play any Role in</i>	
<i>the Control of Germination?</i>	498
The Hormone Hypothesis	499
<i>The Inhibitor Hypothesis</i>	500
<i>ABA as Inhibitor of Germination</i>	500
<i>IAA as Inhibitor of Germination?</i>	500
<i>Inhibitor-Promotor Equilibrium</i>	500
<i>Changes in the Inhibitor-Promotor</i>	
<i>Ratio</i>	501
<i>Ethylene as Germination Inhibitor</i>	501
<i>Cyanogenic Glucosides and</i>	
<i>Cyanolipids as Inhibitors</i>	502
Khan's Hypothesis : Hypothesis on	
the Selective Roles of Hormones	502
<i>Hormone Receptor Concept</i>	502

<i>Metabolic Events During Dormancy Removal and Germination.....</i>	503
<i>Membrane- Site of Metabolic Processes.....</i>	504
<i>GA and Membrane</i>	504
<i>ABA and Membrane</i>	504
<i>Nucleic acid and Protein Synthesis</i>	504
<i>Cascade Model of Genome Activation.....</i>	504
<i>Enzyme Activation and Seed Germination.....</i>	505
<i>Mobilization of Storage Materials.....</i>	506
<i>Energy Generation During Germination.....</i>	506
<i>Seed Dormancy</i>	507
<i>Classification of Dormancy</i>	508
<i>The Imposed Dormancy (Quiescence).....</i>	508
<i>The Innate (Deep) Dormancy.....</i>	508
<i>Causes of Dormancy</i>	509
<i>Impermeability of Seed Coats to Water</i>	509
<i>Mechanical Resistance of the Embryo to Growth.....</i>	509
<i>Low Permeability of the Seed Coat to Gases</i>	509
<i>Dormancy Due to a Metabolic Block.....</i>	510
<i>Factors Regulating Emergence and Seedling Establishment in the Field</i>	510
<i>Soil Moisture</i>	510
<i>Soil Strength</i>	510
<i>Seedling Emergence Strength.....</i>	511
<i>Soil Salts and Fertilizer Effects on Emergence</i>	511
<i>Seed Treatments</i>	512
<i>Fungicides</i>	512
<i>Scarification</i>	513
<i>Preplant Hardening.....</i>	513
<i>Use of AMP</i>	513
<i>Electromagnetism.....</i>	513
<i>Herbicides</i>	513
<i>Inoculation.....</i>	514

CHAPTER 28

Physiology of Flowering	515
What is a Flower?	515
Nature of Flowering	515
Floral Structure.....	516
<i>Calyx.....</i>	516
<i>Corolla</i>	516
<i>Androecium</i>	517
<i>Gynoecium (Pistil).....</i>	517
<i>Polygamous, Monoecious or Dioecious Plants</i>	517
Colour Range in Flowers	517
Fragrance in Flowers.....	518
Developmental Stages of Flowering	518
<i>First stage.....</i>	518
<i>Second stage.....</i>	518
<i>Final Stage</i>	518
Developmental Stages	518
<i>Juvenile Phase.....</i>	520
<i>Adult Phase</i>	520
<i>Inflorescence Development</i>	520
<i>The Shoot Apex and Phase Changes</i>	521
Floral Meristems and Floral Organ Development	521
<i>Arabidopsis: An Example.....</i>	521
The Shoot Apical Meristem Progresses through Three Developmental Phases.....	522
<i>Juvenile Tissues</i>	523
<i>Phase Changes.....</i>	524
<i>Floral Evocation.....</i>	525
<i>Control of Flowering.....</i>	526
<i>The role of the root and shoot apical meristems in vegetative growth and development</i>	526
Autonomous Regulation versus Environmental Cues	527
Flowering and Environment.....	530
<i>Geographical Latitude and Flowering</i>	530
<i>Flowering and Light Spectrum (Light quality).....</i>	530
<i>Artificial Shading and Flowering</i>	531
<i>Flowering and Endogenous Rhythms</i>	531
<i>Availability of Water and Flowering</i>	531

<i>Carbon: Nitrogen Ratio</i>	531	<i>Genes That Control Flowering</i>	
<i>Temperature</i>	532	<i>Time</i>	556
<i>Temperature and Day length</i>	532	<i>Three Types of Genes Regulate</i>	
<i>High Temperature and Flowering</i>	532	<i>Floral Development</i>	557
<i>Photoperiod and Flowering</i>	533	<i>Meristem Identity Genes in</i>	
<i>Classification of Photoperiodic</i>		<i>Antirrhinum and Arabidopsis</i>	557
<i>Responses</i>	534	<i>Homeotic Mutations Help in</i>	
<i>Day Length by Measuring the Length</i>		<i>Identification of Floral Organ</i>	
<i>of the Night</i>	535	<i>Identity Genes</i>	558
<i>Endogenous Oscillator and</i>		<i>Three Types of Homeotic Genes</i>	
<i>Photoperiodic Timekeeping</i>	536	<i>Control Floral Organ Identity</i>	558
<i>Perception of Photoperiodic Stimulus</i>	538	<i>The ABC Model Explains the</i>	
<i>Flowering and Hour-glass Hypothesis</i>	539	<i>Determination of Floral Organ</i>	
<i>Circadian Rhythms</i>	539	<i>Identity</i>	559
<i>Circadian Rhythms: Characteristic</i>		<i>The TEOPOD (TP) Genes Regulate</i>	
<i>Features</i>	540	<i>Juvenility in Maize</i>	559
<i>Phase Shifting and Day-Night</i>		<i>Plant Growth Regulators and</i>	
<i>Cycles</i>	540	<i>Flowering</i>	561
<i>Isolation of Circadian Clock Mutants</i>		<i>Phytohormones and Flower</i>	
<i>in Arabidopsis</i>	541	<i>Initiation</i>	561
<i>Phytochrome and Flowering</i>	542	<i>Auxin and Flowering</i>	561
<i>Phytochrome and Photoperiodism</i>	544	<i>GA and Flowering</i>	562
<i>Far Red Light and Modification of</i>		<i>Cytokinins</i>	562
<i>Flowering in Some LDPs</i>	544	<i>Ethylene</i>	562
<i>Phytochromes A and B</i>	544	<i>Other Plant Growth Substances and</i>	
<i>Blue-Light Photoreceptor and</i>		<i>Flowering</i>	563
<i>Photoperiodism</i>	545	<i>Both Photoperiod and Hormones</i>	
<i>Vernalization</i>	546	<i>Can Influence Floral Development</i>	563
<i>Cold Induction</i>	548	<i>Gibberellins Can Induce Flowering</i>	
<i>Site of Vernalization</i>	549	<i>in Some Plants</i>	563
<i>Shoot Apex as the Site of</i>		<i>Floral Stimulus May Have Several</i>	
<i>Perception</i>	549	<i>Components</i>	564
<i>Interaction of Photoperiodism and</i>		<i>Sex Expression</i>	565
<i>Vernalization</i>	550	<i>Growth Regulators and Sex</i>	
<i>Vernalization and DNA</i>		<i>Expression</i>	565
<i>Demethylation</i>	550		
<i>Devernalization</i>	551	CHAPTER 29	
<i>Florigen Concept</i>	551	Photomorphogenesis	567
<i>Isolation of Florigen?</i>	552	<i>Light as a Biological Agent</i>	567
<i>Biochemical Signaling Involved in</i>		<i>Phototropism</i>	567
<i>Flowering</i>	552	<i>Photoperiodism</i>	568
<i>Identification of the Hypothetical</i>		<i>Light Regulated Gene Expression</i>	568
<i>Florigen Remains Elusive</i>	552	<i>Photomorphogenesis</i>	568
<i>Multiple-Hormone System and</i>		<i>Nature of Photomorphogenic</i>	
<i>Flowering</i>	553	<i>Reactions</i>	569
<i>The Future Task</i>	554	<i>Types of Photoreceptors which</i>	
<i>Molecular Aspects of Flowering</i>	554	<i>Affect Photomorphogenesis in</i>	
<i>Genes Regulating Flowering</i>	555	<i>Plants</i>	569

Photomorphogenesis at which Stage of Life Cycle?	569
Informational Photoreceptors	570
Cryptochrome, the Blue/UV-A Photoreceptor	570
Phytochrome	571
Discovery	571
Physical and Chemical Properties of Phytochrome	572
Distribution of Phytochrome in Plants	572
Absorption spectra of Phytochrome	573
Phytochrome is a Pigment System: Some Evidences	574
Chemical Nature of Phytochrome	574
Two Types of Phytochrome Systems	575
Photomorphogenesis and Dose-Response Relationships	575
Synthesis of Phytochrome	575
Biochemistry of Phytochromes	576
Phyto-Conversion of Pr form to Pyr form	576
Biosynthesis of Phytochrome	577
Cyno Cyanobacterial Phytochromes	577
Bacteriophytochromes	577
Molecular Species of Phytochrome	578
Phytochrome Genes	578
Phytochrome Function	579
Heterodimer-Homodimer Hypothesis for Phytochrome A-and-B Specific Response	580
Domains Involved in Phytochrome Function	580
Degradation of Phytochrome A	580
Regulation of Gene Expression by Phytochrome	581
The CAB Gene: A Model for Phytochrome Regulation of Transcription	581
Interaction of Phytochrome with Transcription System	582
Phytochrome Signaling Molecules	583
Involvement of Second Messengers in Phytochrome Signaling	583
Phytochrome as a Light-Regulated Enzyme	584
Cyanobacterial Phytochrome as a Model for Phytochrome Action	585

Interaction Between Phytochrome and Plant Hormones	585
--	-----

CHAPTER 30

Fruit Ripening	587
Introduction	587
Climacteric	587
RNA Metabolism	588
Enzymes	589
Pigment Formation	589
Changes in Permeability	590
Hormonal Regulation of Fruit Ripening	590

CHAPTER 31

Senescence : A Suicidal Impulse	593
Is Senescence a Universal Phenomenon?	595
Aging vs. Senescence	596
Various levels of senescence	596
Organism senescence	596
Clonal senescence	597
Organ senescence	597
Tissue senescence	597
Cell senescence	597
Organelle senescence	597
Monocarpy vs. Polycarpy	597
Plant Growth and Senescence	599
Effect of Senescence on Vegetative Growth	599
Effect of Senescence on Reproductive Growth	600
Senescence Related to Stress	600
Models Proposed for Mechanism of Senescence	601
Senescence Induced Structural and Ultrastructural Modifications	602
Senescence Induced Structural Modifications	602
Loss of Pigments, Lipids, and Macromolecules	603
Mechanism of carotenoid degradation	608
Carotenoid degradation: a coordinated event	609
Loss of Lipids and Membranes	609
Loss of Macromolecules	610

Senescence-induced Ultrastructural Changes	611
Physiological and Biochemical Changes Associated with Leaf Senescence	612
Photoelectron Transport System	612
Disassembly of Ps I And Ps II and Loss of Electron-Transport Efficiency	613
Damage to the Oxygen-Evolving Complex	614
Loss of Photophosphorylation	614
Loss of Rubisco Activity	614
Oxygen evolving Complex	614
Free Radicals and Ions	621
Cytosolic Ca ²⁺ levels during senescence	621
Role of Ca ²⁺ and calmodulin mediated processes in senescence	621
Mineral Uptake	622
Enzymes	622
Stomatal Conductance	622
Seed filling period and Yield	623

CHAPTER 32

Movements in Plants	624
Introduction	624
Perception	625
Transduction	625
Response	625
Nastic Movements	625
Thigmo- and Seismomorphogenesis	628
A Model of the Involvement of Phytohormones	629
Thigmonasty in Tendrils	629
Tropisms	630
Phototropism	630
Coleoptiles and Stems	630
Perception: Dose-response relations	630
Perception: Action Spectra and the Photoreceptor Pigment	631
Cholodny-Went Model (Hypothesis)	632
Phototropism in Dicots	632
The Unequal Growth Response	633
Solar Tracking	634
Gravitropism	634

Nature of the Gravitropic Response in Higher Plants and Its Adaptive Significance	635
Primary Components of the Gravitropic Response Mechanism in Higher Plants	635
Root Gravitropism	636
Root Gravitropism : Hormonal Regulation of the Process	637
Root Gravitropism: Non-Hormonal Regulation of the Process	638
Proton Efflux	638
Shoot Gravitropism	639
The Role of Ethylene in Shoot Gravitropism	639

CHAPTER 33

Circadian Rhythms in Plants	640
Introduction	640
Historical Aspects	640
Definitions	641
The Occurrence of Rhythms in Plants	641
Exogenous Factors Influencing Rhythms	643
Endogenous Rhythms	644
Endogenous Nature of the Rhythm	644
Molecular Mechanisms of Circadian Rhythms	645
Membrane Participation	645
Ionic Concentration	645
Burgoyne Model	646
D ₂ O (Heavy Water)	646
Photoperiodism	646

CHAPTER 34

Stress Physiology	647
Concept	647
Wind	648
Escaper	648
Plants Resistance to Stress	648
Drought Stress	650
Basic Water Relations Concepts and Drought Stress	650
Effects of Drought on Growth and Yield	652
Effects Water Stress on Ultrastructure of a Cell	655

<i>Effects of Water Stress on</i>	
<i>Photosynthesis</i>	655
<i>C₃, C₄ and CAM Plants Under</i>	
<i>Water Stress</i>	655
<i>Nitrogen Metabolism Under Water</i>	
<i>Stress</i>	656
<i>Water Logging and Anaerobiosis</i>	
<i>(Anoxia)</i>	657
<i>Temperature Stress</i>	658
<i>Chilling Injury</i>	658
<i>Effects of High Temperature</i>	662
<i>Nutrient Stress</i>	663
<i>Conditions Causing Nutrient Stress</i>	663
<i>Deficiency Causes and Symptoms</i>	664
<i>Nutrient and Metal Toxicity</i>	664
<i>Aluminium Toxicity</i>	665
<i>Manganese Toxicity</i>	666
<i>Copper Toxicity</i>	666
<i>Chelation as a Mechanism of</i>	
<i>Tolerance</i>	666
<i>Genetics of Mineral Element Stress</i>	
<i>Tolerance</i>	666
<i>Salt Stress</i>	667
<i>Mechanisms of Tolerance</i>	668
<i>Irradiation Stress</i>	668
<i>Effects of Light Deficit (Shade)</i>	669
<i>Effect of Bright Light</i>	669
<i>Resistance to High Light Intensity</i>	
<i>Injury</i>	670
<i>Ultraviolet Radiation</i>	670
<i>Resistance to Ultraviolet Radiation</i>	670
<i>Ionizing Radiation as Stress</i>	670
<i>Drought Resistance</i>	671

CHAPTER 35

Plant Physiology in Agriculture and Industry

<i>Physiological Adaptations to Water</i>	
<i>Stress and Breeding for Drought</i>	
<i>Tolerance</i>	674
<i>Glaucousness and Reflectance</i>	675
<i>Physiological Adaptation to Salt</i>
