Decision Making Under Uncertainty

with RISKOptimizer®

A Step-by-Step Guide Using
Palisade's RISKOptimizer for Excel®

Wayne Winston

Includes trial versions of RISKOptimizer and models on CD-ROM

Table of Contents

Chapter 1: Introduction to RISKOptimizer: The Newsperson Problem 1

RISKOptimizer Settings and Icons 4

Normal Demand 13

Managing Risk 14

Chapter 2: The Newsperson Problem with Control over Salvage Price 17

Chapter 3: The Multiproduct Newsperson Problem 23

Chapter 4: The Power Model-Fitting the Learning Curve 27

Controlling both Price and Order Quantity 31

Chapter 5: The Newspaper Problem with Diversion 35

Chapter 6: Yield Management 39

Chapter 7: Optimal Ordering Policies for Style Goods 43

Chapter 8: The Product Mix Problem 51

What If Resource Usage is Uncertain? 53

Chapter 9: Agricultural Planning Under Uncertainty 57

Chapter 10: Production Scheduling 61

Chapter 11: Manpower Scheduling Under Uncertainty 65

Using a Cost Structure to Deal with Uncertainty 68

Chapter 12: Job Shop Scheduling 71

Minimizing Total Lateness 75

Minimizing Maximum Lateness 75

Chapter 13: Optimal Sampling 77

Chapter 14: Periodic Review Inventory Model 81

Chapter 15: Truck Loading 87

Chapter 16: Determining Optimal Capacity for a New Product 91

Allowing Flexibility in the Capacity Decision 95

Chapter 17: Capital Budgeting with Uncertain Resource Usage 99

Chapter 18: The Miller-Orr Cash Management Model 103

Chapter 19: Using RISKOptimizer and Solver to Determine Optimal Plant Capacities 109

Setting Up a Macro to Combine Solver and RISKOptimizer Sampling 111

Using RISKOptimizer to Find Optimal Plant Capacities 112

Chapter 20: Modeling Managerial Flexibility 115

Setting Up the Macro 120

Using RISKOptimizer to find the Optimal Capacities 121

Chapter 21: Capacity Planning for an Electric Utility 123

Setting Up the Solver Model 125

Setting Up the Macro 127

Using RISKOptimizer to find Optimal Plant Configuration 128

Chapter 22: Retirement Planning 129

A More Conservative Approach 133

Reducing the Length of the Planning Horizon 134

Using Utility Theory to Incorporate Risk Aversion 134

Using RISKOptimizer to Maximize Expected Utility 137

Chapter 23: Machine Replacement Models 139

Chapter 24: Using RISKOptimizer to Optimize Audit Sampling 145

Stratified Sampling 148

Chapter 25: The Risk Neutral Approach to Option Pricing 153

Option Definitions 153

Arbitrage Arguments and the Risk Neutral Approach 154

Example of Risk Neutral Approach 155

Chapter 26: The Lognormal Model of Stock Prices 157

Risk Neutral Valuation 158
Historical Estimation of Mean and Volatility of Stock Return 158
Finding Mean and Variance of a Lognormal Random Variable 161
Confidence Intervals for a Lognormal Random Variable 162

Chapter 27: Optimal Hedging of Dell Computer Investment 163

Estimating Volatility 163
Using Simulation to Price the Put 165
Value at Risk 168
Maximizing the Sharpe Ratio 171

Chapter 28: Foreign Exchange Options and Hedging Foreign Exchange Risk 173

Hedging a Minor Currency with a Related Currency 177

Chapter 29: Hedging with Futures 181

Pricing of Futures Contracts 181
An Overview of Hedging 182
Hedging Commodity Risk when Production is correlated with Price 186

Chapter 30: Controlling VAR with Correlated Assets 191

Chapter 31: An Introduction to Real Options: Modeling a Gold Mine Lease and Expansion 195

Valuing an Expansion Option 197

Chapter 32: Modeling a Startup and Shutdown Option 201

Chapter 33: Timing Market Entry 205

Chapter 34: Test-Marketing a New Product 211

What about if Decision-Maker is Risk Averse? 219

Chapter 35: Stopping Rule Problems 221

Chapter 36: Maximizing Long-Term Growth: The Kelly Criteria 225

Chapter 37: Optimal Selection of Employees 229

Chapter 38: Using Exponential Smoothing for Quality Control 235

Chapter 39: Bidding and the Winner's Curse 239

Index 243
