

Second Edition

STATISTICS AND OPERATIONS RESEARCH

A Unified Approach

Dr. Debashis Dutta

CONTENTS

<i>Chapter</i>	<i>Pages</i>
<i>Syllabus</i>	<i>(vi)–(ix)</i>

PART A : STATISTICS

Chapter 1 : Introduction to Statistics	3–9
1. Introduction	3
2. Frequency Distribution	3
3. Graphical Representations	5
Chapter 2 : Measures of Location	10–18
1. Definition of Central Tendency/Location	10
2A. Arithmetic Mean (A.M.)	10
2B. Geometric Mean (G.M.)	11
2C. Harmonic Mean (H.M.)	12
3. Median	12
4. Mode	14
5. Quartiles, Deciles and Percentiles	14
Chapter 3 : Measures of Dispersion	19–28
1. Definition of Dispersion	19
2A. Standard Deviation (S.D.)	19
2B. Mean Deviation (M.D.)	21
2C. Quartile Deviation (Q.D.)	21
2D. Range (R)	22
Chapter 4 : Measures of Skewness and Kurtosis	29–34
1. Moments	29
2. Skewness	30
3. Kurtosis	31

Chapter 5 : Correlation and Regression	35-53
1. Bivariate Distribution	35
2. Coefficient of Correlation	35
3. Regression Equations	39
4. Rank Correlation	43
5. Correlation of Bivariate Frequency Distribution	45
6. Multiple Regression	46
7. <i>Curvilinear Regression</i>	47
Chapter 6 : Probability	54-66
1. Definitions	54
2. Axioms of Mathematical Probability	55
3. Complementation Rule	55
4. Theorem of Total Probability/Addition Theorem	56
5. <i>Theorem of Compound Probability/Multiplication Theorem</i>	57
6. Independent Events	58
7. Subjective Probability	58
8. Baye's Theorem	62
Chapter 7 : Probability Distributions	67-79
1. Random Variable	67
2. <i>Characteristics of Probability Distributions</i>	68
Chapter 8 : Some Probability Distributions	80-102
1. Binomial Distribution	80
2. Poisson Distribution	85
3. Normal Distribution	90
4. Other Distributions	98
Chapter 9 : Sampling Theory	103-108
1. Sampling, Population and Samples	103
2. Types of Sampling	103
3. Use of Random Numbers	104
4. Parameter and Statistic	104
5. <i>Sampling Distribution of Mean</i>	105
6. Sampling Distribution of Sample Variance	106
7. Sampling Distribution of Sample Proportion	107

Chapter 10 : Estimation of Parameters	109-123
1. Estimation	109
2. Point Estimation	114
3. Interval Estimation	117
4. Bayesian Estimation	123
Chapter 11 : Testing of Hypothesis	124-146
1. Statistical Hypothesis and Related Terms	124
2. Tests for Large Samples ($n > 30$)	126
3. Tests of Small Samples	129
4. Testing of Proportion	134
5. Testing of a Single Variance	136
6. Testing of Equality of Two Variances	137
7. Goodness of Fit Test	138
8A. Chi Square Test of Independence	139
8B. A 2×2 Table (Simplified Form)	140
8C. Yate's Correction	140
Chapter 12 : Analysis of Variance	147-156
1. Introduction	147
2. Completely Randomized Design (C.R.D.) /One-Way Classification	147
3. Randomized Block Design /Two-Way Classification (R.B.D.)	151
Chapter 13 : Stochastic Process	157-165
1. Definition	157
2. Markov Process and Markov Chain	157
3. Chapman-Kolmogorov Equations	159
4. Classification of States	159
5. Steady-State Probabilities	162
6. First Entrance Probability	163
<i>Appendix A1 : Some Standard Results</i>	166
<i>Appendix A2 : Marginal and Conditional Distributions</i>	168
<i>Appendix A3 : Statistical Tables</i>	173

PART B : OPERATIONS RESEARCH

Chapter 1 : Linear Programming	181-214
1. Introduction to Operations Research	181
2. Introduction to Linear Programming Problems (LPP)	182

3. Graphical Method	184
4. Simplex Method	191
5. Big M Method	197
6. Two Phase Method	200
7. Formulation Problems	205
8. Revised Simplex Method (RSM)	208

Chapter 2 : Duality Theory **215-230**

1. Introduction and Formulation	215
2. Duality Theorems	220
3. Duality of Simplex Method	222
4. The Dual Simplex Method	223
5. Economic Interpretation of Dual Variable	227

Chapter 3 : Transportation Problems **231-253**

1. Introduction and Mathematical Formulation	231
2. Finding Initial Basic Feasible Solution	234
3. UV-Method/Modi Method	240
4. Degeneracy in T.P.	243
5. Max-Type T.P.	245
6. Unbalanced T.P.	248

Chapter 4 : Assignment Problems **254-271**

1. Introduction and Mathematical Formulation	254
2. Hungarian Algorithm	256
3. Unbalanced Assignments	259
4. Max-Type Assignment Problems	262
5. Routing Problems	267

Chapter 5 : Queueing Theory **272-293**

1. Introduction	272
2. Basic Elements of Queueing Model	272
3. Notations	273
4. Kendall's Notation	274
5. Queueing Models Based on Birth-and-Death Processes	274
6. M/M/1 : FIFO/ ∞ Model	274
7. M/M/1 : FIFO/N Model	281
8. M/M/S : FIFO/ ∞ Model	285
9. M/M/S : FIFO/N, $S \leq N$ Model	287
10. Non-Poisson Queueing Models	289

Chapter 6 : Inventory Control	294–308
1. Introduction	294
2. Notations	295
3. Model I : Purchasing Model without Shortage	295
4. Model II : Purchasing Model with Shortage	298
5. Model III : Manufacturing Model without Shortage	300
6. Model IV : Manufacturing Model with Shortage	301
7. Probabilistic Models	303
Chapter 7 : Simulation	309–319
1. Introduction	309
2. Basic Concepts of Simulation	310
3. Random Numbers	310
4. Simulation Methods	312
5. Applications	313
6. Simulation Softwares	318
Chapter 8 : Network Scheduling by CPM/PERT	320–337
1. Introduction	320
2. Time Calculations in Network	321
3. Critical Path Method (CPM)	323
4. Program Evaluation and Review Technique (PERT)	326
5. Elements of Crashing a Network	333
Chapter 9 : Game Theory	338–360
1. Introduction	338
2. Basic Definitions	338
3. Two-person Zero-sum Game with Pure Strategies	339
4. Two-person Zero-sum Game with Mixed Strategies	341
5. Dominance Rules	342
6. Graphical Method for Games	345
7. Linear Programming Method for Games	349
<i>Appendix B1 : A Brief Introduction to Integer Programming</i>	361
<i>Appendix B2 : An Introduction to Non-linear Programming</i>	364
Index	368–369
