

QUANTUM THEORY OF HIGH-ENERGY ION-ATOM COLLISIONS

DŽEVAD BELKIĆ

CRC Press

Taylor & Francis Group

A TAYLOR & FRANCIS BOOK

Contents

About the Author	v
Preface	vi
Acknowledgments	viii
1 Basic notions and main observables in scattering problems	1
1.1 Observables and elementary processes	1
1.2 Energy as the most important physical property	2
1.3 Classification of collisions	5
1.4 The role of wave packets	8
1.5 Adiabatic switching of interaction potentials	9
1.6 Collimation of beams of projectiles	9
1.7 General waves and quantum mechanical waves	12
1.8 Probability character of quantum collisions	14
2 Requirements of the theory for the experiment	17
2.1 Elementary events versus multiple scatterings	22
2.2 Average probabilities	23
2.3 Total cross sections	24
2.4 Differential cross sections	30
2.5 Total probabilities	32
2.6 Transmission phenomena	33
2.7 Quantum mechanical currents and cross sections	36
3 Continuous spectrum and eigen-problems of resolvents	39
3.1 Completeness and separability of the Hilbert spaces	39
3.2 The key realizations of abstract vector spaces	41
3.3 Isomorphism of vector spaces	42
3.4 Eigen-problems for continuous spectra	45
3.5 Normal and Hermitean operators	51
3.6 Strong and weak topology	53
3.7 Compact operators for mapping of the weak to strong limits	58
3.8 Strong differentiability and strong analyticity	59
4 Linear and bilinear functionals	61
4.1 Linear functionals for mapping between vector spaces and scalar fields	61
4.2 The Riesz-Freshe theorem	63

4.3	Bilinear functionals	66
5	Definition of a quantum scattering event	71
5.1	Hamiltonian operators and boundedness	71
5.2	Evolution operators and the Møller wave operators	72
5.3	The Cauchy strong limit in non-stationary scattering theory	73
5.4	Three criteria for a quantum collisional system	74
6	The adiabatic theorem and the Abel strong limit	79
6.1	Adiabatic theorem for scattering states	79
6.2	Adiabatic theorem and existence of wave operators	80
6.3	The Abel strong limit in stationary scattering theory	81
6.4	Exponential screening of potentials and adiabatic theorem	83
6.5	Adiabatic theorem and the Green operators	84
6.6	Adiabatic theorem and the Lippmann-Schwinger equations	85
7	Non-stationary and stationary scattering via the strong limits	87
7.1	The Abel limit and Lippmann-Schwinger equations	87
7.2	The Abel limit and Fourier integrals	95
8	Scattering matrix and transition matrix	97
8.1	The Abel limit and scattering operators	97
8.2	<i>Matrix elements of scattering operators</i>	99
8.3	Transition operators	101
9	Spectral analysis of operators	105
9.1	The Abel limit with no recourse to the Cauchy limit	105
9.2	The spectral theorem	106
9.3	Unitary operators and strong topology	108
9.4	The Abel limit for the Møller wave operators	114
9.5	The link between the Møller operators and Green resolvents	120
10	The existence and completeness of the Møller wave operators	125
10.1	Linearity and isometry of wave operators	125
10.2	Boundedness of wave operators in the whole Hilbert space	126
10.3	The Schur lemma on invariant sub-spaces for evolution operators	126
10.4	Intertwining relations for evolution operators and wave operators	128
10.5	The role of spectral projection operators	130
10.6	Completeness of the Møller wave operators	133
10.7	Scattering operator derived from intertwining wave operators	135

11	Four-body theories for fast ion-atom collisions	139
11.1	Main features of interactive four-body dynamics	140
11.2	Notation and basic formulae	146
11.3	The entrance channel	147
11.3.1	The $Z_P - (Z_T; e_1, e_2)_i$ collisional system	147
11.3.2	The $(Z_P, e_1)_{i_1} - (Z_T, e_2)_{i_2}$ collisional system	150
11.4	The exit channels	151
11.4.1	Double electron capture	151
11.4.2	Single electron capture	154
11.4.3	Transfer ionization	156
12	Perturbation series with the correct boundary conditions	157
12.1	The Lippmann-Schwinger equations	158
12.2	The Born expansions with the correct boundary conditions for four-body collisions	160
13	The Dodd-Greider series for four-body collisions	163
13.1	Derivation of the distorted waves for the initial states	167
13.1.1	The $Z_P - (Z_T; e_1, e_2)_i$ collisional system	167
13.1.2	The $(Z_P, e_1)_{i_1} - (Z_T, e_2)_{i_2}$ collisional system	170
14	Double electron capture	171
14.1	The CDW-4B method	171
14.2	The SE-4B method	174
14.3	The CDW-EIS-4B method	176
14.4	The CDW-EFS-4B method	177
14.5	The BDW-4B method	179
14.6	The BCIS-4B method	185
14.7	The CBI-4B method	188
14.8	Comparison between theories and experiments	190
14.8.1	Double electron capture into the ground state	190
14.8.2	Double electron capture into excited states	205
15	Simultaneous transfer and ionization	215
15.1	The CDW-4B method	215
15.2	Comparison between theories and experiments	220
16	Single electron detachment	231
16.1	The MCB-4B method	235
16.2	Comparison between theories and experiments	242
17	Single electron capture	259
17.1	The CDW-4B method	259
17.1.1	Differential cross sections: The Thomas double scat- tering at all energies	263

17.1.2	Total cross sections	265
17.2	The CDW-BFS (prior BDW-4B) and CDW-BIS (post BDW-4B method)	278
18	Electron capture by hydrogen-like projectiles	297
18.1	The CB1-4B method	297
18.2	Comparison between theories and experiments	301
19	Simultaneous Transfer and Excitation	313
19.1	The CDW-4B method for the TE process	314
19.2	The TEX mode for radiative decays of asymmetric systems	315
19.2.1	A model for the RTE _X modes	315
19.2.2	A model for the NTE _X modes	319
19.3	The CDW-4B method for the TEX modes	320
19.4	The CDW-4B method for the TE process in asymmetric collisions	321
19.4.1	The $K\alpha - K\alpha$ emission line from S^{14+}	322
19.4.2	The $K\alpha - K\beta$ emission lines from S^{14+}	325
19.5	Target charge Z_T and the interference between the RTE _X and NTE _X modes	326
19.6	The TEA mode for nearly symmetrical systems: the Auger decay	329
19.7	The CDW-4B method for the TEA modes	332
19.8	Description of the final state	333
19.9	Cross sections for the TEA modes	335
19.10	The CDW-4B method in the Feshbach resonance formalism	336
19.11	Comparison between theories and experiments for electron spectra near Auger peaks	337
19.11.1	Electron energy spectral lines	337
19.11.2	Total cross section for the TEA mode	343
20	Concluding remarks and outlooks	351
	List of acronyms in the main text and bibliography	368
	References	371
	Index	407
