<b>1 The Real-Time and Study-Mode Data Environment in Modern SCADA/EMS</b>	<b>1</b>
<i>Sudhir Virmani and Savu C. Savulescu</i>	
1.1 Introduction	1
1.1.1 General Background	1
1.1.2 Anatomy of a SCADA System	2
1.1.3 Real-Time vs. Study-Mode Processes	3
1.1.4 Next Level of Functionality: The EMS	4
1.1.5 The Impact of Wide-Area Monitoring Systems	6
1.2 SCADA/EMS Architectures	8
1.2.1 Conceptual Overview	8
1.2.2 Functional Architecture	9
1.2.3 Implementation Architecture	11
1.3 Integrating Stability Applications with the SCADA/EMS	13
1.3.1 Stability Assessment in the SCADA/EMS Context	13
1.3.2 Data Issues	15
1.3.2.1 Real-Time, Study-Mode and Planning Models	15
1.3.2.2 Formal and De Facto Data Format Standards	16
1.3.2.3 Data Interfaces and Quality	17
1.3.2.4 User Interface and Interaction	18
1.3.3 Performance Issues	19
1.4 References	21
<b>2 Overview of Key Stability Concepts Applied for Real-Time Operations</b>	<b>23</b>
<i>Savu C. Savulescu</i>	
2.1 Introduction	23
2.2 In Search of the Stability Limits	26

2.2.1	Background	27
2.2.2	Are Stability Limits Quantifiable?	27
2.3	Transient and Voltage Stability Limits	28
2.3.1	Transient Stability Limits	28
2.3.2	Voltage Stability Limits	30
2.3.2.1	Need to Represent the Generators	33
2.3.2.2	Impact of the Load Model	34
2.4	Steady-State Stability Limits	34
2.4.1	General Considerations	34
2.4.2	Practical Steady-State Stability Criteria	36
2.4.3	Distance to Instability. Security Margin	37
2.4.3.1	Steady-State Stability Reserve	37
2.4.3.2	Security Margin	37
2.5	Concluding Remarks	38
2.6	References	40
	Annex 1-1. Reactive Power Steady-State Stability Criterion $d\Delta Q/dV$	40

### **3 LIPA Implementation of Real-Time Stability Monitoring in a CIM Compliant Environment** 45

*Loris Arnold, Janos Hajagos, Susan M. Manessis, and Anie Philip*

3.1	Introduction	45
3.1.1	LIPA Power System at a Glance	45
3.1.2	LIPA's CIM Compliant Environment	47
3.1.2.1	SCADA/EMS Overview	47
3.1.2.2	CIM, UIB, and GID Concepts	48
3.1.2.3	CIM-Compliant PSS/ODMS—SCADA/EMS Integration	50
3.1.2.3.1	Background	50
3.1.2.3.2	CIM-Compliant PSS/ODMS—XA/21 Integration	51
3.1.2.3.3	System Planning Vision of CIM	53
3.2	Static and Dynamic Security Assessment at LIPA	55
3.2.1	Overview	55
3.2.1.1	Static Security Assessment—Current Capabilities	55
3.2.1.1.1	Thermal Security Analysis	55
3.2.1.1.2	Voltage Security Analysis	55
3.2.1.1	Static Security Assessment—Future Enhancements	56
3.2.1.2	Need to Assess Voltage Stability in Real-Time	57
3.2.2	Implementation of Real-Time Stability Assessment and Monitoring	58
3.2.2.1	Key Functional Characteristics	58
3.2.2.2	Integration of the Fast Stability Tool with PSS/ODMS	61
3.2.2.2	User Interface and Performance	61

3.3	Benchmarking the Real-Time Stability Application	65
3.3.1	Accuracy Testing	66
3.3.1.1	Approach	66
3.3.1.2	Benchmarking Procedure and Results	67
3.3.2	Tuning the Security Margin	69
3.3.2.1	Background and Approach	69
3.3.2.2	Security Margin for LIPA System	70
3.4	Practical Experience and Outlook	70
3.5	References	71

## **4 Real-Time Stability Monitoring at the Independent System Operator in Bosnia and Herzegovina** 73

*Dusko Vickovic and Roland Eichler*

4.1	Introduction	73
4.1.1	Bosnia and Herzegovina Transmission System in the Southeastern European Context	73
4.1.2	Need to Monitor the Risk of Instability	74
4.1.3	Overview of NOS BiH Approach to Real-Time Stability Monitoring	76
4.2	Interim Implementation of Real-Time Stability Assessment at NOS BiH	77
4.2.1	Real-Time Stability Tool	77
4.2.2	Implementation Overview	77
4.2.3	Experience with the Interim Implementation	78
4.3	Real-Time Stability Assessment in the New SCADA/EMS Environment	82
4.3.1	Overview of the New System	82
4.3.2	Implementation of Real-Time Stability Monitoring	85
4.4	Conclusions and Recommendations	89
4.5	References	89
	Annex 4-1. TSL, TTC, and the Stability Envelope	91
	Annex 4-2. Siemens Implementation of the Continuation Power Flow	94

## **5 Experience with Real-Time Stability Assessment at Transselectrica** 101

*Horia S. Campeanu, Cornel Erbasu, and Cornel Aldea*

5.1	Introduction	101
5.1.1	Overview of the Romanian Transmission System	101
5.1.2	The SCADA/EMS	104
5.1.2.1	Hierarchy and Configuration	104
5.1.2.2	System Dispatching Support Applications	105
5.1.2.3	Ancillary Services	105
5.2	Security Assessment Philosophy and Criteria	107
5.2.1	Steady-State Stability Assessment	108

5.2.1.1	Power and Voltage Steady-State Stability Reserve Indicator	108
5.2.1.2	Stability-Constrained Transmission Corridors	109
5.2.1.2.1	Background	109
5.2.1.2.2	Stability-Constrained Transmission Corridors in Romania	110
5.2.2	Transient Stability Studies	112
5.3	Real-Time Steady-State Stability Assessment and Monitoring	113
5.3.1	Implementation Overview	113
5.3.1.1	Needs and Justification	113
5.3.1.2	Key Functional Characteristics	114
5.3.2	Tight Integration of the Stability Tool with the SCADA/EMS	114
5.3.3	User Interface, Performance, and Operational Experience	116
5.4	Off-Line Stability Tools in Support of System Operations	120
5.4.1	SAMI	121
5.4.1.1	Application Overview	121
5.4.1.1.1	Solution Technique Overview	121
5.4.1.1.2	Methodology	122
5.4.1.2	Mode of Execution	123
5.4.1.3	Using Calculation Results Obtained with SAMI	124
5.4.2	Other Tools	124
5.5	Conclusions and Outlook	125
5.6	References	126

## **6 Implementation of Online Dynamic Security Assessment at Southern Company** 129

*Kip Morison, Lei Wang, Fred Howell, James Viikinsalo, and Alan Martin*

6.1	Introduction	129
6.1.1	Problem Statement	129
6.1.2	Need for Online Dynamic Security Assessment at Southern Company	130
6.2	DSA Implementation Fundamentals	132
6.2.1	Background	132
6.2.2	DSA Objectives, Requirements, and Project Steps	133
6.2.2.1	Target Problems	133
6.2.2.2	Performance Requirements	134
6.2.2.3	System Reliability Requirements	135
6.2.2.4	Users of the System	135
6.2.2.5	Project Preparation	136
6.2.2.5.1	State Estimator	136
6.2.2.5.2	Network and Dynamic Models	136
6.2.2.5.3	Other Necessary Data and Information	137
6.2.2.6	Knowledge and Experience from Off-Line Studies	137
6.2.2.7	Knowledgeable and Dedicated Technical Staff	138

6.2.3	Selection of Solution Methods	138
6.2.4	Model and Data Development	138
6.2.4.1	Data Quality	139
6.2.4.2	External System Equivalencing	139
6.2.4.3	Data Matching	140
6.2.4.4	Data Exchange	140
6.2.4.5	Bad Data Detection and Correction	141
6.2.5	Software and Hardware Architecture Specification	141
6.2.5.1	Reliability	141
6.2.5.2	Portability	141
6.2.5.3	Scalability	141
6.2.5.4	Security	142
6.2.5.5	Redundancy	142
6.2.5.6	Accessibility	142
6.2.5.7	Data Storage and Case Archiving	142
6.2.5.8	Presentation of Results	143
6.2.5.9	Off-Line Study Capability	144
6.2.6	Development and Implementation	144
6.2.7	Testing and Delivery	145
6.3	Transient Security Assessment Implementation at Southern Company	145
6.3.1	Model Development	145
6.3.1.1	Modeling the Internal System	145
6.3.1.2	Modeling the External System	146
6.3.1.3	Benchmarking the Results	146
6.3.1.4	Preparations for Dynamic Simulation	147
6.3.2	System Architecture	148
6.3.3	Examples and Operation Experiences	150
6.3.4	Future Development Plan	150
6.4	Conclusions	151
6.5	References	151
Annex 6-1. Further Details of the DSA Software and Hardware Architecture		152
	Description of the Core DSA Software	152
	Online DSA Implementation Using DSA Tools	153

<b>7</b>	<b>Online Security Assessment for the Brazilian System—A Detailed Modeling Approach</b>	<b>155</b>
<i>Jorge L. Jardim</i>		
7.1	Introduction	155
7.1.1	Problem Statement	155
7.1.2	Need for Online Dynamic Security Assessment	156
7.1.3	Brief Description of the Brazilian System	157
7.1.4	Operating Reliability Concerns at ONS	157
7.1.4.1	Transmission Security Issues	157
7.1.4.2	Underlying SCADA/EMS Architecture	158

7.2	Security Criteria and Functions	159
7.2.1	Security Criteria	159
7.2.2	Security Functions	160
7.2.2.1	Contingency Analysis at an Operating Point	160
7.2.2.2	Import-Export Transfer Capacity	161
7.2.2.3	Security Regions	161
7.2.2.3	Preventive and Corrective Functions	164
7.3	Solution Methods and Architecture	164
7.3.1	Analytical Methods	164
7.3.1.1	Steady-State Techniques	164
7.3.1.1.1	Newton Power Flow	164
7.3.1.1.2	Synthetic Dynamic Power Flow	165
7.3.1.1.3	Continuation Power Flow	165
7.3.1.1.4	Optimal Power Flow	166
7.3.1.2	Numerical Integration	166
7.3.1.3	Energy Functions	169
7.3.1.4	Single-Machine Equivalent Methods	170
7.3.1.5	Prony Analysis	171
7.3.2	Solution Architecture	171
7.3.2.1	Parallelization	171
7.3.2.1	Software Layers	172
7.3.2.3	Integration to SCADA/EMS	172
7.4	Practical Implementation Aspects	174
7.4.1	Bus Numbering	174
7.4.2	Dynamic Models	174
7.4.3	Network Size	175
7.4.4	Contingency Set	175
7.4.5	Quality of Real-Time Data	175
7.4.6	Impact on Processes	176
7.5	User Interface And Performance	176
7.5.1	User Interface	176
7.5.2	Performance	179
7.5.2.1	Factors Affecting Performance	179
7.5.2.1	Performance Requirements	179
7.6	Concluding Remarks	180
7.7	Acknowledgments	180

Annex 10-1. Quasi-Steady-State Simulation	273
Principle of the QSS Approximation	273
Handling of Frequency in QSS Simulation	274
QSS Model of the Synchronous Machine and its Regulations	275
Numerical Integration of the QSS Model	275
<b>11 The Real-Time Supervision of Transmission Capacity in the Swedish Grid</b>	<b>279</b>
<i>Lars Sandberg and Klas Roudén</i>	
11.1 Introduction	279
11.1.1 Swedish Power System in the Context of the Nordel Interconnection	279
11.1.2 Operational Characteristics of the Transmission Grid	281
11.1.2.1 Physical Phenomena Caused by Topology, Pattern of MW Transfers, and Insufficient Reactive Compensation	281
11.1.2.2 Concepts and Principles for Power System Control in Sweden	281
11.1.2.2.1 Transmission Bottlenecks	281
11.1.2.2.2 Primary and Secondary Voltage Control	283
11.1.2.2.3 Primary and Secondary Frequency Control	283
11.1.2.2.4 Tap Changing Under Load and Automatic Voltage Regulation	283
11.1.2.2.5 Supervisory Control and Data Acquisition	284
11.1.3 The Deregulated Nordel Electricity Market	285
11.2 Prior and Current Application Development at SVK	286
11.2.1 Earlier Methods for Computing the Transmission Capacity	286
11.2.2 State Estimation and Generator Reactive Capacity	287
11.2.3 Spica—The SvK Voltage Security Assessment System	288
11.2.4 Operational and User Interface Requirements	288
11.2.5 Integration and Performance Requirements	290
11.3 Voltage Security Assessment with SPICA	291
11.3.1 The Load-Flow Model	291
11.3.1.1 Network Modeling	292
11.3.1.2 Modeling the Primary Frequency Regulation	292
11.3.1.3 External Network Equivalents	292
11.3.2 Calculations Performed by Spica	292
11.3.2.1 Procedure Overview	292
11.3.2.2 A Job in Spica	293
11.3.2.3 Contingency Calculations in Spica	294
11.3.3 Solution Technique	294
11.3.3.1 Identifying the State of Voltage Collapse	294

11.3.3.2	Network Equations	296
11.3.4	Calculation Results	297
11.3.5	Working with Spica	299
11.3.6	Limitations Implicit in Static Calculations	301
11.4	Benefiting from the Knowledge of the Current Transmission Capacity	302
11.5	Additional SPICA Functionality	303
11.6	Summary	304
11.6.1	Current and Future Enhancements	304
11.6.2	Conclusions	304
<b>Appendix A</b>	<b>Dimo's Approach to Steady-State Stability Assessment: Methodology Overview, Numerical Example, and Algorithm Validation</b>	<b>307</b>

B.3.1.3	Contingency Filtering, Ranking, and Assessment (FILTRA)	365
B.3.2	Near-Optimal Transient Stability Control	365
B.3.2.1	Preventive Contingency Stabilization	366
B.3.2.1.1	Single-Contingency Stabilization	366
B.3.2.1.2	Generation Rescheduling Patterns	367
B.3.2.1.3	Illustrations and Observations	368
B.3.2.1.4	Multicontingency Simultaneous Stabilization	369
B.3.2.2	OPF for Near-Optimal Transient-Stability Control	370
B.3.2.2.1	Transient-Stability-Constrained (TSC) OPF Techniques	370
B.3.2.2.2	SIME-Based Sequential Approach	370
B.3.2.2.3	Integrated TSC–OPF Software	371
B.3.3	Open-Loop Emergency Control (OLEC)	373
B.3.3.1	OLEC Scope and Principle	373
B.3.3.2	Illustration	374
B.3.4	Transient Oscillations Damping Assessment and Control	375
B.3.4.1	Oscillations Damping Assessment	376
B.3.4.2	Oscillations Damping Control	377
B.3.4.3	Integrated Damping Assessment and Control Function	377

B.3.4.4	Illustrations	377
B.3.4.4.1	Plant Mode Oscillations Damping Assessment and Control	377
B.3.4.4.2	Interarea Oscillation Damping Assessment and Control	379
B.4	Emergency SIME	382
B.4.1	Emergency SIME in Brief	382
B.4.1.1	Objectives	384
B.4.1.2	Key Predictions	384
B.4.1.3	Main Tasks	384
B.4.1.4	Technological Means	384
B.4.2	Predictive Transient Stability Assessment	385
B.4.2.1	Predicting the OMIB Structure	385
B.4.2.2	Predicting the $P_a - \delta$ Curve	385
B.4.2.3	Predicting Instability	386
B.4.2.4	Validity Test	386
B.4.3	Emergency Control	387
B.4.4	E-SIME Framework	388
B.4.5	Illustration	388
B.4.6	Discussion	392
B.4.6.1	Salient Features	392
B.4.6.2	Still Open Questions	392
B.4.6.3	Concluding Remarks	392
B.5	Postface	394
B.5.1	Preventive SIME	395
B.5.1.1	Advantages Specific to T-D Programs	395
B.5.1.2	Advantages Specific to the Equal-Area Criterion (EAC)	395
B.5.1.3	Advantages Resulting from the Hybridization of T-D Simulations with EAC	395
B.5.2	Emergency SIME	396
B.6	References	397

## **Appendix C Detection and Evaluation of Stability Constrained Transmission Paths** 401

*Marius Pomarleanu and Savu C. Savulescu*

C.1	Introduction	401
C.2	Approach	402
C.2.1	Background	402
C.2.2	Steady-State Stability at a Glance	403
C.2.3	Stability Reserve of the Link	405
C.2.4	Algorithm	406

C.2.5	Topological Search of All the Links in a Network	410
C.2.6	Detection of Stability-Constrained Links	411
C.2.7	Remedial Action	411
C.2.8	User Defined Links	412
C.3	Conclusions	412
C.4	References	412
