## PART I Relational Databases and SQL

|   |           |
|---|-----------|
| <b>1 Introduction to Relational Databases and SQL .....</b> | <b>3</b>  |
| Understand Relational Databases .....                       | 4         |
| The Relational Model .....                                  | 5         |
| Learn About SQL .....                                       | 15        |
| The SQL Evolution .....                                     | 15        |
| Types of SQL Statements .....                               | 18        |
| Types of Execution .....                                    | 19        |
| SQL Standard versus Product Implementations .....           | 21        |
| <b>2 Working with the SQL Environment .....</b>             | <b>29</b> |
| Understand the SQL Environment .....                        | 30        |
| Understand SQL Catalogs .....                               | 32        |
| Schemas .....   | 34        |
| Schema Objects .....  | 35        |
| Then What Is a Database? .....                              | 37        |
| Name Objects in an SQL Environment .....                    | 40        |
| Qualified Names .....                                       | 41        |

|   |            |
|---|------------|
| Create a Schema .....                           | 42         |
| Create a Database .....                         | 44         |
| <b>3 Creating and Altering Tables .....</b>     | <b>49</b>  |
| Create SQL Tables .....                         | 50         |
| Specify Column Data Types .....                 | 54         |
| String Data Types .....                         | 55         |
| Numeric Data Types .....                        | 57         |
| Datetime Data Types .....                       | 58         |
| Interval Data Type .....                        | 60         |
| Boolean Data Type .....                         | 61         |
| Using SQL Data Types .....                      | 62         |
| Create User-Defined Types .....                 | 63         |
| Specify Column Default Values .....             | 64         |
| Delete SQL Tables .....                         | 69         |
| <b>4 Enforcing Data Integrity .....</b>         | <b>73</b>  |
| Understand Integrity Constraints .....          | 74         |
| Use NOT NULL Constraints .....                  | 76         |
| Add UNIQUE Constraints .....                    | 77         |
| Add PRIMARY KEY Constraints .....               | 79         |
| Add FOREIGN KEY Constraints .....               | 83         |
| The MATCH Clause .....                          | 88         |
| The <referential triggered action> Clause ..... | 89         |
| Define CHECK Constraints .....                  | 95         |
| Defining Assertions .....                       | 97         |
| Creating Domains and Domain Constraints .....   | 98         |
| <b>5 Creating SQL Views .....</b>               | <b>103</b> |
| Add Views to the Database .....                 | 104        |
| Defining SQL Views .....                        | 108        |
| Create Updateable Views .....                   | 114        |
| Using the WITH CHECK OPTION Clause .....        | 116        |
| Drop Views from the Database .....              | 117        |
| <b>6 Managing Database Security .....</b>       | <b>123</b> |
| Understand the SQL Security Model .....         | 124        |
| SQL Sessions .....                              | 126        |
| Accessing Database Objects .....                | 128        |
| Create and Delete Roles .....                   | 130        |
| Grant and Revoke Privileges .....               | 131        |
| Revoking Privileges .....                       | 135        |
| Grant and Revoke Roles .....                    | 137        |
| Revoking Roles .....                            | 138        |

## PART II Data Access and Modification

|  |            |
|--|------------|
| <b>7 Querying SQL Data .....</b>                               | <b>145</b> |
| Use a SELECT Statement to Retrieve Data .....                  | 146        |
| The SELECT Clause and FROM Clause .....                        | 147        |
| Use the WHERE Clause to Define Search Conditions .....         | 152        |
| Defining the WHERE Clause .....                                | 156        |
| Use the GROUP BY Clause to Group Query Results .....           | 159        |
| Use the HAVING Clause to Specify Group Search Conditions ..... | 164        |
| Use the ORDER BY Clause to Sort Query Results .....            | 166        |
| <b>8 Modifying SQL Data .....</b>                              | <b>175</b> |
| Insert SQL Data .....  | 176        |
| Inserting Values from a SELECT Statement .....                 | 180        |
| Update SQL Data .....  | 182        |
| Updating Values from a SELECT Statement .....                  | 185        |
| Delete SQL Data .....  | 186        |
| <b>9 Using Predicates .....</b>                                | <b>193</b> |
| Compare SQL Data .....   | 194        |
| Using the BETWEEN Predicate .....                              | 199        |
| Return Null Values .....                                       | 200        |
| Return Similar Values .....                                    | 203        |
| Reference Additional Sources of Data .....                     | 209        |
| Using the IN Predicate .....                                   | 209        |
| Using the EXISTS Predicate .....                               | 213        |
| Quantify Comparison Predicates .....                           | 216        |
| Using the SOME and ANY Predicates .....                        | 216        |
| Using the ALL Predicate .....                                  | 218        |
| <b>10 Working with Functions and Value Expressions .....</b>   | <b>225</b> |
| Use Set Functions .....  | 226        |
| Using the COUNT Function .....                                 | 227        |
| Using the MAX and MIN Functions .....                          | 229        |
| Using the SUM Function .....                                   | 231        |
| Using the AVG Function .....                                   | 232        |
| Use Value Functions .....                                      | 232        |
| Working with String Value Functions .....                      | 233        |
| Working with Datetime Value Functions .....                    | 236        |
| Use Value Expressions .....                                    | 238        |
| Working with Numeric Value Expressions .....                   | 238        |
| Using the CASE Value Expression .....                          | 241        |
| Using the CAST Value Expression .....                          | 244        |
| Use Special Values .....                                       | 245        |

|  |            |
|--|------------|
| <b>11 Accessing Multiple Tables</b>                  | <b>253</b> |
| Perform Basic Join Operations                        | 254        |
| Using Correlation Names                              | 257        |
| Creating Joins with More than Two Tables             | 258        |
| Creating the Cross Join                              | 259        |
| Creating the Self-Join                               | 260        |
| Join Tables with Shared Column Names                 | 261        |
| Creating the Natural Join                            | 262        |
| Creating the Named Column Join                       | 263        |
| Use the Condition Join                               | 263        |
| Creating the Inner Join                              | 264        |
| Creating the Outer Join                              | 266        |
| Perform Union Operations                             | 269        |
| <b>12 Using Subqueries to Access and Modify Data</b> | <b>277</b> |
| Create Subqueries That Return Multiple Rows          | 278        |
| Using the IN Predicate                               | 279        |
| Using the EXISTS Predicate                           | 281        |
| Using Quantified Comparison Predicates               | 282        |
| Create Subqueries That Return One Value              | 283        |
| Work with Correlated Subqueries                      | 284        |
| Use Nested Subqueries                                | 286        |
| Use Subqueries to Modify Data                        | 288        |
| Using Subqueries to Insert Data                      | 288        |
| Using Subqueries to Update Data                      | 290        |
| Using Subqueries to Delete Data                      | 291        |

## PART III Advanced Data Access

|  |            |
|--|------------|
| <b>13 Creating SQL-Invoked Routines</b>  | <b>299</b> |
| Understand SQL-Invoked Routines          | 300        |
| SQL-Invoked Procedures and Functions     | 301        |
| Working with the Basic Syntax            | 301        |
| Create SQL-Invoked Procedures            | 303        |
| Invoking SQL-Invoked Procedures          | 305        |
| Add Input Parameters to Your Procedures  | 306        |
| Using Procedures to Modify Data          | 309        |
| Add Local Variables to Your Procedures   | 311        |
| Work with Control Statements             | 313        |
| Create Compound Statements               | 313        |
| Create Conditional Statements            | 314        |
| Create Looping Statements                | 316        |
| Add Output Parameters to Your Procedures | 320        |
| Create SQL-Invoked Functions             | 321        |

|           |   |            |
|-----------|---|------------|
| <b>14</b> | <b>Creating SQL Triggers</b>                      | <b>329</b> |
|           | Understand SQL Triggers .....                     | 330        |
|           | Trigger Execution Context .....                   | 331        |
|           | Create SQL Triggers .....                         | 333        |
|           | Referencing Old and New Values .....              | 334        |
|           | Dropping SQL Triggers .....                       | 335        |
|           | Create Insert Triggers .....                      | 336        |
|           | Create Update Triggers .....                      | 338        |
|           | Create Delete Triggers .....                      | 343        |
| <b>15</b> | <b>Using SQL Cursors</b>                          | <b>351</b> |
|           | Understand SQL Cursors .....                      | 352        |
|           | Declaring and Opening SQL Cursors .....           | 353        |
|           | Declare a Cursor .....                            | 355        |
|           | Working with Optional Syntax Elements .....       | 356        |
|           | Creating a Cursor Declaration .....               | 360        |
|           | Open and Close a Cursor .....                     | 363        |
|           | Retrieve Data from a Cursor .....                 | 363        |
|           | Use Positioned UPDATE and DELETE Statements ..... | 368        |
|           | Using the Positioned UPDATE Statement .....       | 368        |
|           | Using the Positioned DELETE Statement .....       | 370        |
| <b>16</b> | <b>Managing SQL Transactions</b>                  | <b>377</b> |
|           | Understand SQL Transactions .....                 | 378        |
|           | Set Transaction Properties .....                  | 381        |
|           | Specifying an Isolation Level .....               | 382        |
|           | Specifying a Diagnostics Size .....               | 387        |
|           | Creating a SET TRANSACTION Statement .....        | 388        |
|           | Start a Transaction .....                         | 389        |
|           | Set Constraint Deferability .....                 | 390        |
|           | Create Savepoints in a Transaction .....          | 392        |
|           | Releasing a Savepoint .....                       | 394        |
|           | Terminate a Transaction .....                     | 395        |
|           | Committing a Transaction .....                    | 395        |
|           | Rolling Back a Transaction .....                  | 396        |
| <b>17</b> | <b>Accessing SQL Data from Your Host Program</b>  | <b>403</b> |
|           | Invoke SQL Directly .....                         | 404        |
|           | Embed SQL Statements in Your Program .....        | 406        |
|           | Creating an Embedded SQL Statement .....          | 407        |
|           | Using Host Variables in Your SQL Statements ..... | 408        |
|           | Retrieving SQL Data .....                         | 411        |
|           | Error Handling .....                              | 413        |

|  |            |
|--|------------|
| Create SQL Client Modules .....                    | 417        |
| Defining SQL Client Modules .....                  | 418        |
| Use an SQL Call-Level Interface .....              | 419        |
| Allocating Handles .....                           | 421        |
| Executing SQL Statements .....                     | 423        |
| Working with Host Variables .....                  | 424        |
| Retrieving SQL Data .....                          | 426        |
| <b>18 Working with XML Data .....</b>              | <b>433</b> |
| Learn the Basics of XML .....                      | 434        |
| Learn About SQL/XML .....                          | 437        |
| The XML Data Type .....                            | 437        |
| SQL/XML Functions .....                            | 439        |
