Adobe®

AIR™

Blur the line between
the Web and the desktop

Create AIR applications
with Flex® and Flash®

Build functional applications
in the simplest way possible

Bible

The book you need to succeed!

Introduction	xxiii
--------------------	-------

Part I: Introduction to AIR 1

Chapter 1: Clearing the AIR 3

Why Use AIR?.....	3
Comparable Technologies	5
Flash and AJAX for the Web.....	6
Silverlight.....	6
Google Gears.....	6
Java and .NET	7
AIR Development Platforms at a Glance	7
Summary	8

Chapter 2: Setting Up Your Development Environment..... 9

Adobe Integrated Runtime	9
System requirements for AIR.....	10
Installing AIR	11
Windows.....	11
Mac OS X.....	11
Uninstalling AIR.....	12
Windows.....	12
Mac OS X.....	12
Development Environments.....	12
Flex Builder 3.....	12
Download and install Flex Builder.....	13
Create an AIR project	13
Flash CS3.....	18
Install Flash CS3.....	18
Configure your Publish Settings	19
Testing your AIR application	24
Dreamweaver CS3.....	24
Install Dreamweaver	24
Create a site.....	25
Create an application file	28
Configure AIR application settings.....	29
Summary	32

Chapter 3: Building Your First AIR Application	33
Using Flex Builder 3	33
Using Flash CS3	35
Using Dreamweaver CS3	38
Summary	41

Part II: Programming for AIR Essentials 43

Chapter 4: Crash Course in AIR Programming	45
A closer look at ActionScript	45
What's new in AS3	46
Runtime exceptions and type checking	46
Sealed classes	46
Method closures	46
ECMAScript for XML	46
Regular expressions	47
Namespaces	47
New primitive types	47
AS3 classes and interfaces	47
Packages	47
Classes	48
Interfaces	49
Access modifiers	50
Methods	51
Using inheritance	53
Events	56
Constructing an event object	57
Dispatching an event	58
Display list	59
DisplayObject	60
DisplayObjectContainer	60
An Introduction to Flash	61
The Timeline	61
Working with text	61
Using the TextField	62
Static and dynamic text	62
Input text	63
The Library	63
Converting a symbol on the stage	63
The New Symbol window	63
Adding a folder	64
Adding a font or video	64
Adding audio	64

Using ActionScript in Flash	64
Setting the document class	65
Class linkage	65
Timeline ActionScript	65
The Highlights of Flex	66
MXML	66
Basic syntax	66
Components	67
UIComponent	67
Layout components	67
Controls	68
Event handling	68
Summary	69

Chapter 5: Development Essentials71

The AIR Security Model	71
Sandboxes	72
About application sandboxes	72
The application sandbox	72
Nonapplication sandboxes	72
Code signing	73
Digital certificates	73
Obtaining a certificate	74
Signing your application	74
Signature timestamps	75
Best practices	75
The application sandbox	75
Sensitive information and credentials	76
Downgrade attacks	77
Basic Application Properties	77
Basic settings	79
id	79
Filename	79
Version	79
Description	79
Name	79
Copyright information	79
Installation settings	80
Install folder	80
Program menu folder	80
Window settings	80
Content and title	80
Appearance and transparency	80
Resizing	82
Window sizing and positioning	82
Summary	82

Chapter 6: Debugging and Profiling	83
Debugging Basics	83
Logging	84
Profiling Techniques	89
Monitoring the frame rate	89
Monitoring the total memory	90
Timing the code execution	91
Monitoring memory with the Flex Builder profiler	91
Memory and Performance Tips	93
Bypassing the Flex framework	93
Using mouseEnabled and mouseChildren properties	95
Setting stage quality	95
Using smart math	96
Reusing objects	96
Use weakly referenced event listeners	96
Summary	97

Part III: AIR API 99

Chapter 7: Communicating with the Local Machine 101

Differences among Operating Systems	102
Native menu support	102
System icons	103
Special characters	103
The AIR Security Sandbox	104
Malicious scripts	104
Hacked code libraries	104
Malicious strings	104
Sandbox types	105
Application sandbox	105
Remote sandbox	105
Local with filesystem sandbox	106
Local trusted sandbox	106
Local with network sandbox	106
Using sandboxes	106
Working with the Operating System	108
Monitoring the network	108
Monitoring a specific URL	109
Monitoring user presence	112
Summary	113

Chapter 8: Using the Filesystem 115

Filesystem Basics	115
File objects	116
FileMode	116

FileStream	117
Filesystem information	117
Using Folders	117
Creating a folder	117
Creating a temporary folder	118
Copying and moving folders	118
Deleting folders	120
Using Files	121
Copying a file	121
Moving a file	121
Deleting a file	122
Reading and writing files	122
FileStream objects	123
Working with XML	124
File Encryption	125
Simple Text Editor	126
Setting up the MXML application file	126
Creating the user interface	126
Creating TestFileStream.as and its API	128
TextFileStream's API	128
Building TextFileStream	129
Main API	133
Building out Main	133
Managing Simple Text Editor's application state	133
Managing Simple Text Editor's application state	136
Summary	145

Chapter 9: Using the Clipboard 147

Choosing a Clipboard Format	147
Copying Data to the Clipboard	148
Pasting Data from the Clipboard	152
Copy and Paste Sample Application	158
Getting started	158
Setting up Cairngorm	161
Set up the application model	161
Set up the application control	164
Implementing the view	166
Summary	171

Chapter 10: Dragging and Dropping. 173

Drag and Drop Classes	174
NativeDragManager	174
NativeDragOptions	174

NativeDragEvent	174
NativeDragActions	175
Clipboard	175
ClipboardFormats	175
ClipboardTransferMode	175
Dragging Out	176
Preparing the data for drag-out	176
Creating a Clipboard object	176
Sample Application	178
The Tumblr API	178
The application structure	178
Sending Tumblr posts	178
AbstractPost	179
RegularPost	183
PhotoPost	184
Dragging files	185
RegularForm.mxml	186
PhotoForm.mxml	188
Summary	192

Chapter 11: SQLite Databases 193

Introducing SQLite	193
The anatomy of a database	194
The ACID principle	195
Getting Started with SQL	196
Connecting to a database	196
Creating a simple table	199
Understanding data types	202
Adding data to your table	203
Reading data out of a database	205
Managing SQL Databases	208
Using SELECT statements	208
The FROM clause and the JOIN clause	209
The WHERE clause	212
The GROUP BY clause and the HAVING clause	213
Compound SELECT statements	214
The ORDER BY clause	214
The LIMIT clause	214
Maintaining your database	215
The UPDATE statement	215
The DELETE statement	215
The ALTER TABLE statement	215
Summary	216

Chapter 12: Using Native Operating System Windows 217

Creating System Windows	218
Window types	220
NativeWindowType.NORMAL	221
NativeWindowType.UTILITY	222
NativeWindowType.LIGHTWEIGHT	222
Window chrome	223
NativeWindowSystemChrome.NONE	226
NativeWindowSystemChrome.STANDARD	226
Window sizing and positioning	226
Controlling System Windows	227
Minimizing, maximizing, and restoring windows	227
minimize();	228
maximize();	228
restore();	228
close();	229
Managing multiple windows	230
orderToFront();	231
orderToFrontOf();	231
orderToBack();	231
orderBehind();	231
Adding content to windows	231
Adding SWF content	231
Adding HTML Content	232
Adding dynamic content	233
NativeWindow Events	233
Using Application Icons	234
Taskbar and dock icons	234
Windows taskbar icons	235
OS X dock icons	236
Systray icons	237
Dynamic icons	237
Twitter Client Sample Application	237
Using the Twitter API	238
Creating Toast-styled windows	239
Toast windows	239
The Toaster	242
Creating the dialog boxes	246
The login window	246
The status update input window	248
Putting it all together	249
The Main application	250
Summary	254

Chapter 13: HTML Content.	255
Accessing the AIR API.....	256
Using the AIR HTML Introspector	261
Using Dreamweaver	269
Summary	270

Part IV: Building an Application 271

Chapter 14: Preparing to Build a Large-Scale Application. 273

Planning an Application.....	274
Ideation.....	274
Who.....	274
What	275
Where	275
When	275
Why	276
How	277
Selecting a development path.....	277
Information architecture.....	278
The Architecture Phase	280
Architecture frameworks	280
Cairngorm	281
PureMVC.....	281
Leveraging existing libraries	282
Summary	283

Chapter 15: Building a Reusable Config Class 285

Defining the XML	285
Defining capability requirements.....	286
Loading the XML.....	286
Using File and FileStream.....	286
Using URLLoader	287
Resolving Dynamic Properties.....	289
Using Composition for Event Dispatching	291
Global Accessibility	295
Choosing an approach.....	295
Delegation	295
The Singleton design pattern	296
Implementing the Singleton pattern	296
Your Config Class in Action	301
Summary	303

Chapter 16: Application Design Best Practices 305

Preventing Spaghetti Code	306
How spaghetti has changed	307
Make ravioli instead	307
Encapsulation	308
Documentation	309
Entropy	309
Flex and Flash Guidelines	310
Transitions	312
Combining MXML with ActionScript	315
General Coding Guidelines	317
Package structuring	318
Using interfaces	318
Summary	322

Chapter 17: SDK Development. 323

SDK Development Essentials	323
Application descriptor file	324
Source files	324
Compiling Applications	324
The acompc compiler	325
The acompc configuration file	325
Component compiler usage examples	326
Debugging	327
ADL command-line arguments	327
ADL examples	328
Summary	328

Chapter 18: Sample Application: LogReader 329

Requirements	329
Functionality	330
User interface	330
Architecture	330
Making the application updatable	331
Preparing the API	338
Creating the application view and logic	340
Testing	352
Summary	355

Chapter 19: Polishing a Finished Application 357

The Importance of Design and Usability	358
The relationship between function, usability, and design	358
Properties of good design	362
Layout	362
Typography	362

Color palettes	362
Transitions	363
Sound.....	363
Properties of good experience	364
Keyboard shortcuts and versatility.....	365
Language support.....	365
Accessibility.....	366
Performance and reliability.....	366
Flex Builder 3 Design Tutorial	368
Cascading Style Sheets	368
Embedding assets.....	371
Creating custom components.....	373
Programmatic skins.....	375
Using Flex states to guide transitions.....	379
Summary	382

Part V: Testing and Deploying 383

Chapter 20: Deployment Workflow 385

Deploying from the Flex Builder 3 IDE	385
Deploying from the Flash CS3 IDE	388
Deploying from the Dreamweaver CS3 IDE	390
Compiling, Testing, and Deploying with Command-line Tools.....	392
Using MXMLC to compile an SWF file.....	392
Using ADL to test an application.....	393
Using ADT to generate a digital certificate.....	393
Using ADT to package an AIR file	393
Summary	394

Chapter 21: Leveraging Ant to Automate the Build Process 395

Getting Set Up	395
Adding Ant view to the stand-alone Flex Builder IDE.....	396
Installing Ant on your machine	396
Creating a Build File	397
Defining properties	397
Defining targets.....	399
Defining tasks	401
Executing targets.....	403
Adding Basic Targets.....	405
Main target.....	405
Init target	405
Compile targets.....	406
Launch target	410
Generate certificate target.....	410

Deploy target.....	411
Clean target.....	412
Adding Advanced Targets	412
Generate documentation target	413
Export and package source target.....	415
User input target	416
Summary	418

Chapter 22: Installation and Distribution 419

Implementing an Update System	419
Version tracking.....	420
Notifying the user that updates are available	423
Downloading and installing updates	424
Using the Adobe Install Badge.....	427
Creating a Custom Install Badge	428
Manual Installation	432
Summary	432

Index 433
