## Chapter 1 The $\alpha$ -Helix as the Simplest Protein Model: Helix–Coil Theory, Stability, and Design

*Andrew James Doig*

1.1	Introduction	1
1.2	Structure of the $\alpha$ -Helix	1
1.2.1	Capping Motifs	2
1.2.2	Metal Binding	3
1.2.3	The $3_{10}$ -Helix	3
1.2.4	The $\pi$ -Helix	3
1.3	Design of Peptide Helices	4
1.3.1	Host–Guest Studies	4
1.3.2	Helix Lengths	5
1.3.3	The Helix Dipole	5
1.3.4	Acetylation and Amidation	5
1.3.5	Solubility	6
1.3.6	Concentration Determination	6
1.3.7	Helix Templates	7
1.4	Helix–Coil Theory	7
1.4.1	Zimm–Bragg Model	8
1.4.2	Lifson–Roig Model	8
1.4.3	AGADIR	12
1.4.4	Lomize–Mosberg Model	13
1.5	Forces Affecting $\alpha$ -Helix Stability	13
1.5.1	Helix Interior	13
1.5.2	Caps	14
1.5.3	Phosphorylation	15

1.5.4	Non-covalent Side-chain Interactions	18
1.5.5	Covalent Side-chain Interactions	20
1.5.6	Capping Motifs	20
1.5.7	Ionic Strength	20
1.5.8	Temperature	21
	References	21

## **Chapter 2 Kinetics and Mechanisms of $\alpha$ -Helix Formation**

*Urmi Doshi*

2.1	Introduction	28
2.2	Experimental Techniques Employed to Study Helix–Coil Kinetics	31
2.3	Theoretical Approaches to Explore Helix–Coil Kinetics	34
2.4	General Observations in Helix–Coil Kinetics	35
2.5	Kinetic Theory of the Helix–Coil Transition	37
2.6	Free-Energy Landscape for $\alpha$ -Helix Formation	39
2.7	Mechanisms of $\alpha$ -Helix Formation	41
2.8	Reaction Coordinates for $\alpha$ -Helix Formation	43
2.9	The Nature of the Diffusion Coefficient for $\alpha$ -Helix Formation	44
2.10	Implications for Protein Folding	45
	References	46

## **Chapter 3 The Protein Folding Energy Landscape: A Primer**

*Peter G. Wolynes*

3.1	Energy Landscape: Metaphor and Math	49
3.2	Random Sequences – Prehistoric Proteins (Possibly), but Not Most Modern Proteins	50
3.3	The Statistical Energy Landscape	50
3.4	The Energy Landscape of Long Evolved Proteins	55
3.5	Minimal Frustration, Capillarity, and Protein Topology	61
3.6	Delightful Prediction of Many of the Devilish Details of Folding	64
	References	66

## **Chapter 4 Hydrogen Exchange Experiments: Detection and Characterization of Protein Folding Intermediates**

*Yawen Bai*

4.1	Introduction	70
4.2	Intrinsic Exchange Rates for Unfolded Polypeptides	71

4.3	Linderstrøm-Lang Model for Amide Hydrogen Exchange in Folded Proteins	72
4.4	Characterization of Acid Denatured States by Hydrogen Exchange	73
4.4.1	Apomyoglobin (AMb)	74
4.4.2	Cytochrome c (cyt c)	75
4.4.3	Ribonuclease H (RNase H)	75
4.5	Pulsed-Amide H/D Exchange Method	75
4.5.1	Cytochrome c	78
4.5.2	Apomyoglobin	78
4.5.3	RNase H	79
4.5.4	Hen Egg White Lysozyme (HEWL)	79
4.6	Native-State Hydrogen Exchange Method	80
4.6.1	Cytochrome c	82
4.6.2	RNase H	83
4.6.3	Rd-apocytochrome <i>b</i> <sub>562</sub>	83
	References	83

## **Chapter 5 Statistical Differential Scanning Calorimetry: Probing Protein Folding–Unfolding Ensembles**

*Beatriz Ibarra-Molero and Jose Manuel Sanchez-Ruiz*

5.1	Differential Scanning Calorimetry (DSC) as a Tool for the Complete Energetic Description of Protein Folding/Unfolding Thermal Equilibria	85
5.2	Partition Functions of Folding/Unfolding Processes	87
5.3	The Two-state Equilibrium Model: A Historical Perspective	93
5.4	Folding Free-energy Barriers from Equilibrium DSC Experiments	96
5.5	The van 't Hoff to Calorimetric Enthalpy Ratio Revisited	98
5.6	Protein Kinetic Stability: Free-energy Barriers for Irreversible Denaturation from Scan-rate Dependent DSC	100
	References	103

## **Chapter 6 Fast Protein Folding**

*Martin Gruebele*

6.1	Introduction	106
6.2	Fast Folding: Why and How?	108
6.3	Fast Dynamics of Polypeptide Chains	110
6.3.1	Loop Formation	111
6.3.2	Protein Collapse	114

6.3.3	Secondary Structure Formation	115
6.3.4	Timescales	115
6.4	Microsecond Protein Folding	115
6.4.1	History	115
6.4.2	Sub-millisecond Instrumentation	117
6.4.3	Spectroscopic Signatures Used in Fast Folding	119
6.4.4	Case Studies	121
6.5	Downhill Folding	127
6.6	Outlook	130
	Acknowledgement	131
	References	131

## **Chapter 7 Single Molecule Spectroscopy in Protein Folding: From Ensembles to Single Molecules**

*Benjamin Schuler*

7.1	Introduction	139
7.2	History and Principles of Single Molecule Detection	140
7.3	Kinetics: From Ensembles to Single Molecules	141
7.3.1	Rate Constants and Probabilities	143
7.4	Correlation Analysis	146
7.5	FRET Efficiency Distributions and Distance Dynamics	149
7.5.1	Single Molecule FRET Experiments	149
7.5.2	Timescales and Distance Distributions	150
7.5.3	Dynamics from Transfer Efficiency Fluctuations	153
7.6	Pleasure, Pain, and Promise of Single Molecule Experiments	154
	Acknowledgements	156
	References	156

## **Chapter 8 Computer Simulations of Protein Folding**

*Vijay S. Pande, Eric J. Sorin, Christopher D. Snow and Young Min Rhee*

8.1	Introduction: Goals and Challenges of Simulating Protein Folding	161
8.1.1	Simulating Protein Folding	161
8.1.2	What are the Challenges for Atomistic Simulation?	163
8.2	Protein Folding Models: from Atomistic to Simplified Representations	164
8.2.1	Atomic Force Fields	164
8.2.2	Implicit Solvation Models	166

8.2.3	Minimalist Models	167
8.2.4	How Accurate are the Models?	168
8.3	Sampling: Methods to Tackle the Long Timescales Involved in Folding	169
8.3.1	Tightly Coupled Molecular Dynamics (TCMD)	169
8.3.2	Replica Exchange Molecular Dynamics (REMD)	169
8.3.3	High-temperature Unfolding	170
8.3.4	Low-viscosity Simulation Coupled with Implicit Solvation Models	170
8.3.5	Coarse-grained and Minimalist Models	170
8.3.6	Path Sampling	171
8.3.7	Graph-based Methods	171
8.3.8	Markovian State Model Methods	171
8.4	Validation of Simulation Methodology: Protein Folding Kinetics	172
8.4.1	Low-viscosity Simulations	172
8.4.2	Estimating Rates with a Two-state Approximation	173
8.4.3	Markovian State Models (MSMs)	176
8.4.4	Other Approaches	177
8.5	Predicting Protein Folding Pathways	179
8.5.1	Kinetics Simulations	179
8.5.2	Thermodynamics Simulations	181
8.6	Conclusions	182
	References	184

## **Chapter 9 Protein Design: Tailoring Sequence, Structure, and Folding Properties**

*Andreas Lehmann, Christopher J. Lanci, Thomas J. Petty II,  
Seung-gu Kang and Jeffery G. Saven*

9.1	Introduction	188
9.2	Empirical Approaches to Protein Design	190
9.2.1	Hierarchical Protein Design	190
9.2.2	Combinatorial Methods	191
9.2.3	Directed Evolution	192
9.2.4	Intrinsic Limitations	192
9.3	Computational Approaches to Structured-based Design	193
9.3.1	Backbone Structure and Sequence Constraints	194
9.3.2	Residue Degrees of Freedom	194
9.3.3	Energy Function	195
9.3.4	Solvation	195
9.3.5	Foldability Criteria and Negative Design	196

9.3.6	Search and Characterization of Sequence Ensembles	197
9.4	Recent Successes in Protein Design	198
9.4.1	Tailored Mutations for Ultrafast Folding	198
9.4.2	Designing Structure and Sequence	199
9.4.3	Facilitating the Study of Membrane Proteins	201
9.4.4	Proteins with Non-biological Components	202
9.4.5	Symmetric Structures	202
9.4.6	Computational Methods for Directed Evolution	203
9.5	Outlook	204
	Acknowledgements	204
	References	205

## **Chapter 10 Protein Misfolding and $\beta$ -Amyloid Formation**

*Alexandra Esteras-Chopo, Maria Teresa Pastor and Luis Serrano*

10.1	Introduction	214
10.2	General Principles of Amyloid Formation	216
10.2.1	Historical Perspective	216
10.2.2	Molecular Basis of Amyloidosis: Protein Misfolding	217
10.2.3	The Structural Architecture of Amyloid Fibrils	221
10.2.4	Amyloid Induced Toxicity	224
10.2.5	Experimental Techniques to Study Amyloid Formation	226
10.2.6	Cytotoxicity Studies	228
10.3	Experimental Studies on Amyloid Model Systems	229
10.3.1	Diversity and Commonalities in the Amyloid Protein Family	229
10.3.2	Protein Amyloidogenic Regions	230
	Acknowledgements	235
	References	235

## **Chapter 11 Scenarios for Protein Aggregation: Molecular Dynamics Simulations and Bioinformatics Analysis**

*Ruxandra Dima, Bogdan Tarus, G. Reddy, John E. Straub and D. Thirumalai*

11.1	Introduction	241
11.2	Scenarios for Peptide Association	243
11.2.1	General Ideas	243

11.2.2	The Assembly of A $\beta$ <sub>16–22</sub> Oligomers	245
11.2.3	Dimerization of A $\beta$ <sub>10–35</sub> Peptides	247
11.2.4	Initial Stages in the PrP <sup>C</sup> Conformational Transition	251
11.3	Conclusions	262
	References	263
	<b>Subject Index</b>	266
