**David Delany**

Foreword by  
Professor John Moxham

CHURCHILL  
LIVINGSTONE

# Contents

- 1. How to look at a chest X-ray 1**
  - 1.1 Basic interpretation is easy 2
  - 1.2 Technical quality 4
  - 1.3 Scanning the PA film 10
  - 1.4 How to look at the lateral film 13
  
- 2. Localizing lesions 17**
  - 2.1 The lungs 18
  - 2.2 The heart 21
  
- 3. The white lung field 27**
  - 3.1 Pleural effusion 28
  - 3.2 Collapse 31
  - 3.3 Pneumonectomy 42
  - 3.4 Consolidation 44
  - 3.5 *Pneumocystis carinii* pneumonia 46
  - 3.6 Asbestos plaques 48
  - 3.6 Mesothelioma 50
  - 3.7 The coin lesion 52
  - 3.8 Cavitating lung lesion 54
  - 3.9 Left ventricle failure 56
  - 3.10 Acute respiratory distress syndrome 60
  - 3.11 Bronchiectasis 64
  - 3.12 Fibrosis 66
  - 3.13 Chickenpox pneumonia 68
  - 3.14 Miliary shadowing 70

- 4. The black lung field 73**
  - 4.1 Chronic obstructive pulmonary disease 74
  - 4.2 Pneumothorax 76
  - 4.3 Tension pneumothorax 78
  - 4.4 Pulmonary embolus 81
  - 4.5 Mastectomy 84
  
- 5. The abnormal hilum 87**
  - 5.1 Unilateral hilar enlargement 88
  - 5.2 Bilateral hilar enlargement 91
  
- 6. The abnormal heart shadow 95**
  - 6.1 Atrial septal defect 96
  - 6.2 Mitral stenosis 98
  - 6.3 Left ventricular aneurysm 100
  - 6.4 Pericardial effusion 102
  
- 7. The widened mediastinum 105**
  - The widened mediastinum 106
  
- 8. Abnormal ribs 109**
  - Metastatic deposits 110
  
- 9. Abnormal soft tissues 113**
  - Surgical emphysema 114
  
- 10. The hidden abnormality 117**
  - 10.1 Pancoast's tumour 118
  - 10.2 Air under the diaphragm 120
