WEB SERVICES: PRINCIPLES AND TECHNOLOGY

PEARSON
Prentice
Hall

Contents

<i>Preface</i>	xix
<i>Foreword</i>	xxix
<i>Acknowledgements</i>	xxxix
Part I Basics	1
Chapter 1: Web services basics	3
1.1 Introduction	4
1.1.1 What are Web services?	5
1.1.2 Typical Web services scenarios	6
1.2 The concept of software as a service	8
1.3 A more complete definition of Web services	10
1.4 Characteristics of Web services	12
1.4.1 Types of Web services	12
1.4.1.1 Simple or informational services	13
1.4.1.2 Complex services or business processes	14
1.4.2 Functional and non-functional properties	15
1.4.3 State properties	15
1.4.4 Loose coupling	16
1.4.5 Service granularity	17
1.4.6 Synchronicity	17
1.4.7 Well-definedness	19
1.4.8 Service usage context	19
1.5 Service interface and implementation	19
1.6 The service-oriented architecture	22
1.6.1 Roles of interaction in the SOA	23
1.6.1.1 Web services provider	23
1.6.1.2 Web services requestor	23
1.6.1.3 Web services registry	24
1.6.2 Operations in the SOA	24
1.6.2.1 The publish operation	25
1.6.2.2 The find operation	25
1.6.2.3 The bind operation	26

1.6.3	SOA: an example involving complex services	26
1.6.4	Layers in an SOA	27
1.7	The Web services technology stack	32
1.8	Quality of service (QoS)	35
1.9	Web services interoperability	39
1.10	Web services versus components	40
1.11	Impact and shortcomings of Web services	43
1.12	Summary	46
	Review questions	46
	Exercises	47

Part II Enabling infrastructure 49

Chapter 2: Distributed computing infrastructure 51

2.1	Distributed computing and Internet protocols	52
2.1.1	Internet protocols	52
2.1.1.1	The Open Systems Interconnection reference model	53
2.1.1.2	The TCP/IP network protocol	55
2.1.2	Middleware	57
2.2	The client-server model	59
2.3	Characteristics of interprocess communication	60
2.3.1	Messaging	60
2.3.2	Message destinations and sockets	62
2.3.3	Synchronous and asynchronous forms of message communication	63
2.4	Synchronous forms of middleware	64
2.4.1	Remote procedure calls	64
2.4.2	Remote Method Invocation	66
2.5	Asynchronous forms of middleware	66
2.5.1	Store and forward messaging	67
2.5.2	Publish/subscribe messaging	69
2.5.3	Event-driven processing mechanisms	71
2.5.4	Point-to-point queuing	73
2.6	Request/reply messaging	74
2.7	Message-oriented middleware	75
2.7.1	Integration brokers	77
2.7.2	The Java Message Service (JMS)	80
2.8	Transaction-oriented middleware	81
2.9	Enterprise application and e-business integration	82

2.10 Summary	86
Review questions	86
Exercises	87

Chapter 3: Brief overview of XML **89**

3.1 XML document structure	90
3.1.1 XML declaration	90
3.1.2 Elements	91
3.1.3 Attributes	92
3.2 URIs and XML namespaces	92
3.3 Defining structure in XML documents	95
3.3.1 The XML Schema Definition Language	95
3.3.2 The XML schema document	96
3.3.3 Type definitions, element, and attribute declarations	98
3.3.3.1 Element declarations	98
3.3.3.2 Attribute declarations	100
3.3.4 Simple types	100
3.3.5 Complex types	101
3.4 XML schemas reuse	101
3.4.1 Deriving complex types	102
3.4.1.1 Complex type extensions	102
3.4.1.2 Complex type restrictions	103
3.4.1.3 Polymorphism	103
3.4.2 Importing and including schemas	104
3.4.2.1 Including schemas	105
3.4.2.2 Importing schemas	106
3.5 Document navigation and transformation	109
3.5.1 The XML Path Language	109
3.5.2 Using XSLT to transform documents	111
3.6 Summary	114
Review questions	114
Exercises	115

Part III Core functionality and standards **117**

Chapter 4: SOAP: Simple Object Access Protocol **119**

4.1 Inter-application communication and wire protocols	120
4.1.1 SOAP as a wire representation	120
4.2 SOAP as a messaging protocol	121

4.3	Structure of a SOAP message	125
4.3.1	SOAP envelope	126
4.3.2	SOAP header	128
4.3.2.1	SOAP intermediaries	130
4.3.3	SOAP body	133
4.4	The SOAP communication model	134
4.4.1	RPC-style Web services	135
4.4.2	Document (message)-style Web services	137
4.4.3	Communication modes and messaging exchange patterns	139
4.5	Error handling in SOAP	139
4.6	SOAP over HTTP	140
4.7	Advantages and disadvantages of SOAP	143
4.8	Summary	144
	Review questions	145
	Exercises	145

Chapter 5: Describing Web services 147

5.1	Why is a service description needed?	148
5.2	WSDL: Web Services Description Language	148
5.2.1	WSDL interface definition	150
5.2.2	WSDL implementation	157
5.2.3	WSDL message exchange patterns	164
5.3	Using WSDL to generate client stubs	168
5.4	Non-functional descriptions in WSDL	171
5.5	Summary	171
	Review questions	172
	Exercises	173

Chapter 6: Registering and discovering Web services 174

6.1	Service registries	175
6.2	Service discovery	176
6.3	UDDI: Universal Description, Discovery, and Integration	177
6.3.1	UDDI data structures	178
6.3.1.1	Service provider information	182
6.3.1.2	Web service description information	185
6.3.1.3	Web service access and technical information	187
6.3.1.4	The publisher assertion structure	192

6.3.2	WSDL to UDDI mapping model	193
6.3.2.1	Publishing service interfaces and service bindings	194
6.3.2.2	Publishing service implementations	196
6.3.2.3	Summary of WSDL to UDDI mapping model	198
6.3.3	The UDDI API	202
6.3.3.1	Enquiry API	202
6.3.3.2	Publishing API	204
6.3.4	Querying the UDDI model	205
6.3.5	UDDI usage model and deployment variants	207
6.4	Summary	209
	Review questions	210
	Exercises	210

Part IV Event notification and service-oriented architectures **213**

Chapter 7: Addressing and notification **215**

7.1	Web services and stateful resources	216
7.2	Introduction to the WS-Resource Framework	217
7.2.1	WS-Addressing	220
7.2.2	WS-Resource	223
7.2.3	Resource properties	227
7.2.4	Resource lifecycle	231
7.2.5	Service groups	232
7.3	Web Services Notification	233
7.3.1	Peer-to-peer notification	234
7.3.1.1	WS-BaseNotification interfaces	236
7.3.1.2	Subscription filtering	239
7.3.2	Notification topics	241
7.3.3	Brokered notification	244
7.4	Web Services Eventing	247
7.5	Summary	249
	Review questions	249
	Exercises	250

Chapter 8: Service-oriented architectures **253**

8.1	What is a software architecture?	254
8.1.1	System quality attributes	255
8.1.2	Common architectural concerns	256

8.2	The SOA revisited	257
8.3	Service roles in an SOA	260
8.4	Reliable messaging	263
8.4.1	Definition and scope of reliable messaging	263
8.4.2	WS-ReliableMessaging	265
8.4.2.1	Structure of WS-ReliableMessaging	267
8.4.2.2	WS-ReliableMessaging examples	268
8.5	The Enterprise Service Bus	270
8.5.1	The event-driven nature of SOA	273
8.5.2	Key capabilities of an ESB	276
8.5.3	ESB integration styles	279
8.5.4	Elements of an ESB solution	282
8.5.4.1	Integration brokers	284
8.5.4.2	Application servers	286
8.5.4.3	Business process management	288
8.5.4.4	ESB transport-level choices	289
8.5.5	Connectivity and translation infrastructure	290
8.5.6	Leveraging legacy assets	292
8.5.7	Scalability issues in an ESB	294
8.5.8	Integration patterns using an ESB	296
8.6	The extended SOA	298
8.7	Summary	301
	Review questions	302
	Exercises	302

Part V Service composition and service transactions 305

Chapter 9: Processes and workflows 307

9.1	Business processes and their management	307
9.1.1	Characteristics of business processes	308
9.2	Workflows	310
9.3	Business process integration and management	313
9.4	Cross-enterprise business processes	317
9.5	Service composition meta-model	319
9.5.1	Flow modeling concepts	319
9.5.2	Composing Web services	323
9.6	Web services orchestration and choreography	328
9.6.1	Orchestration versus choreography	329
9.7	The Business Process Execution Language (BPEL)	331

9.7.1	BPEL structure	332
9.7.1.1	Abstract and executable processes	334
9.7.1.2	Message flow	336
9.7.1.3	Control flow	338
9.7.1.4	Data flow	341
9.7.1.5	Process orchestration	342
9.7.1.6	Message correlation	346
9.7.1.7	Fault handling	348
9.7.1.8	Event handling	350
9.7.2	A simple example in BPEL	350
9.7.2.1	Process orchestration	351
9.7.2.2	Data handling	355
9.7.2.3	Control flow	355
9.7.2.4	Correlations	359
9.7.2.5	Fault handling and compensations	361
9.8	Choreography	362
9.8.1	Uses of choreography description	362
9.8.2	Web Services Choreography Description Language	363
9.9	Other initiatives and languages	366
9.10	Summary	367
	Review questions	368
	Exercises	368

Chapter 10: Transaction processing 370

10.1	What is a transaction?	371
10.1.1	Properties of transactions	372
10.1.2	Concurrency control mechanisms	373
10.2	Distributed transactions	375
10.2.1	Distributed transaction architectures	376
10.2.2	Two-phase commit protocol	381
10.2.2.1	Phase I: preparation	381
10.2.2.2	Phase II: commitment/abortion	381
10.3	Nested transactions	382
10.3.1	Closed nested transactions	384
10.3.1.1	The two-phase commit protocol for nested transactions	386
10.3.1.2	Concurrency control	388
10.3.2	Open nested transactions	389
10.3.2.1	Transactional workflows	391
10.3.2.2	Recovery mechanisms	393

10.4	Transactional Web services	395
10.4.1	Definitions and general characteristics of Web services transactions	396
10.4.2	Operational characteristics of Web services transactions	398
10.4.3	Web services transaction types	399
10.4.3.1	Atomic actions	399
10.4.3.2	Long-duration transactions	401
10.4.4	Consensus groups and interposition	402
10.4.5	States of Web services transactions	405
10.4.6	Web services transaction frameworks	406
10.5	WS-Coordination and WS-Transaction	407
10.5.1	WS-Coordination	408
10.5.1.1	Coordination context	411
10.5.1.2	Activation service	413
10.5.1.3	Registration service	414
10.5.1.4	Typical message exchange between two applications	417
10.5.2	WS-Transaction	419
10.5.2.1	Atomic transaction	419
10.5.2.2	Business activity	423
10.6	Web Service Composite Application Framework	426
10.6.1	Web Service Context	427
10.6.2	Web Service Coordination Framework	428
10.6.3	Web Services Transaction Management	429
10.7	Summary	432
	Review questions	432
	Exercises	433

Part VI Service security and policies 435

Chapter 11: Securing Web services 437

11.1	Web services security considerations	438
11.1.1	Security threats for Web services	439
11.1.2	Countermeasures	441
11.2	Network-level security mechanisms	442
11.2.1	Firewalls	442
11.2.1.1	Firewall architectures	443
11.2.2	Intrusion detection systems and vulnerability assessment	447

11.2.3	Securing network communications	448
11.2.3.1	Symmetric encryption	448
11.2.3.2	Asymmetric encryption	449
11.2.3.3	Digital certificates and signatures	450
11.3	Application-level security mechanisms	453
11.3.1	Authentication	454
11.3.1.1	Protection domains	455
11.3.1.2	Web resource protection	456
11.3.2	Authorization	457
11.3.3	Integrity and confidentiality	458
11.3.4	Non-repudiation	459
11.3.5	Auditing	459
11.3.6	Application-level security protocols	460
11.3.6.1	Secure Sockets Layer (SSL)	460
11.3.6.2	Internet Protocol Security (IPSec)	461
11.3.6.3	Kerberos	461
11.3.7	Security infrastructures	463
11.3.7.1	Public-key infrastructure	463
11.3.7.2	Directory services	465
11.4	Security topologies	466
11.5	XML security standards	466
11.5.1	XML Signature	468
11.5.2	XML Encryption	471
11.5.3	XML Key Management Specification (XKMS)	473
11.5.3.1	XML Key Information Service Specification (X-KISS)	475
11.5.3.2	XML Key Registration Service Specification (X-KRSS)	475
11.5.4	Security Assertions Markup Language	476
11.5.5	XML Access Control Markup Language (XACML)	481
11.6	Securing Web services	487
11.6.1	Web services application-level security challenges	487
11.6.2	Web services security roadmap	489
11.6.3	Web services security model	490
11.6.4	WS-Security	493
11.6.4.1	A use case for WS-Security	493
11.6.4.2	Integrating WS-Security in SOAs	494
11.6.4.3	WS-Security key features	497

11.6.5	Managing security policies	503
11.6.6	Managing secure sessions	506
11.6.7	Managing trust	507
11.6.8	Managing privacy	508
11.6.9	Managing federated identities	508
11.6.10	Managing authorization	510
11.7	Summary	510
	Review questions	511
	Exercises	511

Chapter 12: Service policies and agreements **513**

12.1	What are policies and why are they needed?	514
12.1.1	Characteristics of policies	514
12.1.2	The need for a policy language	515
12.2	Types of policies	516
12.3	Policies and Web services standards	517
12.4	WS-Policy framework	518
12.4.1	WS-Policy overview	520
12.4.1.1	Policy expressions	523
12.4.1.2	Policy assertion usage types	526
12.4.2	Combining and comparing policies	529
12.4.2.1	Merging policies	530
12.4.2.2	Policy intersection	531
12.4.3	Policy attachments	533
12.4.3.1	WSDL policy attachment	533
12.4.3.2	External policy attachment	535
12.5	Service agreements	537
12.5.1	WS-Agreement structure	538
12.5.2	Agreement language	540
12.6	Summary	542
	Review questions	543
	Exercises	543

Part VII Service semantics and business protocols **545**

Chapter 13: Semantics and Web services **547**

13.1	The semantic interoperability problem	548
13.2	The role of metadata	549

13.3	Resource Description Framework	551
13.3.1	The RDF data model	553
13.3.2	RDF syntax	555
13.3.3	RDF Schema	561
13.4	Richer schema languages	566
13.5	WS-MetadataExchange	567
13.6	Summary	570
	Review questions	572
	Exercises	573

Chapter 14: Business protocols **576**

14.1	The supply-chain business ecosystem	577
14.2	Semantic problems at the business process level	579
14.3	Business standards and protocols	580
14.3.1	Electronic Data Interchange	583
14.3.2	RosettaNet	586
	14.3.2.1 The RosettaNet business architecture	586
	14.3.2.2 RosettaNet and Web services	587
14.3.3	The Electronic Business XML initiative	590
	14.3.3.1 The ebXML reference architecture	591
	14.3.3.2 ebXML functional phases	595
	14.3.3.3 ebXML and Web services	599
14.4	XML in vertical organizations	599
14.5	Summary	602
	Review questions	603
	Exercises	603

Part VIII Service design and development **605**

Chapter 15: Web services development lifecycle **607**

15.1	Why is a Web services development methodology needed?	608
15.2	Web services development and related methodologies	609
15.3	System development lifecycle	611
15.4	Properties of service-oriented design and development	614
15.5	Service-oriented design and development milestones	618
15.6	Quality of service-oriented design and development	619
15.6.1	Service coupling	620

15.6.2	Service cohesion	621
15.6.3	Service granularity	621
15.7	Overview of Web services development lifecycle	622
15.8	The planning phase	624
15.9	The analysis phase	625
15.9.1	"As-is" process model analysis	626
15.9.2	Business service identification	627
15.9.3	Business service scoping	629
15.9.4	Business service gap analysis	629
15.9.5	Business service realization analysis	630
15.10	The service design phase	633
15.10.1	Service design concerns	633
15.10.1.1	Managing service and component granularity	634
15.10.1.2	Designing for service reusability	634
15.10.1.3	Designing for service composability	634
15.10.2	Specifying services	635
15.10.2.1	Structural and behavioral service specification	636
15.10.2.2	Service programming style	638
15.10.3	Specifying business processes	638
15.10.3.1	Describing the business process structure	640
15.10.3.2	Describing business roles	641
15.10.4	Specifying service policies	644
15.10.5	Services integration model	646
15.11	The service construction phase	647
15.11.1	Constructing a service: the provider perspective	648
15.11.2	Constructing services: the client perspective	650
15.12	The service test phase	651
15.13	The service provisioning phase	653
15.13.1	Service governance	653
15.13.2	Service certification	656
15.13.3	Service metering and rating	657
15.14	The service deployment phase	658
15.15	The service execution phase	659
15.16	The service monitoring phase	660

15.17	Summary	661
	Review questions	661
	Exercises	662

Part IX Service management 665

Chapter 16: Web services management 667

16.1	Managing distributed systems	668
16.1.1	Purpose of distributed systems management	668
16.1.2	Distributed management for Web services	669
16.2	Enterprise management frameworks	673
16.3	Conceptual management architecture	675
16.3.1	Management capabilities and functions	676
16.4	Standard distributed management frameworks	678
16.4.1	Simple Network Management Protocol	679
16.4.2	Common Information Model/Web-Based Enterprise Management	679
16.4.3	Java Management Extensions	680
16.5	Web services management	681
16.5.1	Features of Web services management	681
16.5.2	Functional characteristics of Web services management	682
16.5.3	Service management architectural approaches	685
16.5.4	Management infrastructure services	687
16.5.5	Connecting service management and application channels	688
16.6	The Web Services Distributed Management Initiative	691
16.6.1	Management Using Web Services (MUWS)	692
16.6.2	Management of Web Services (MOWS)	696
16.7	Summary	699
	Review questions	700
	Exercises	701

Part X Emerging trends 703

Chapter 17: Recent trends and developments 705

17.1	Grid computing	706
17.1.1	A brief overview of grid computing	706

17.1.2	Features and requirements of grid systems	708
17.1.3	Grid application considerations	710
17.1.4	Grid services	711
17.2	Mobile computing	714
17.2.1	Elements of mobile infrastructure	714
17.2.2	Wireless protocols	717
17.2.3	Mobile Web services	718
17.2.3.1	Mobility considerations	719
17.2.3.2	Field Web services	720
17.2.4	Mobile Web services standard initiatives	721
17.2.4.1	The Open Mobile Alliance Initiative	721
17.2.4.2	Mobile Web services framework	722
17.3	Summary	724
	Review questions	724
	<i>References</i>	727
	<i>Index</i>	741
