Foundations and Applications of Mechanics

Volume I

Continuum Mechanics

Second Edition

C.S. JOG

Alpha Science

Contents

Preface vii
Notation xi

1 Introduction to Tensors 1
1.1 Vector Spaces . . . 2
1.2 Vectors in $\Re^3$ . . . 7
1.3 Second-Order Tensors . . . 12
1.3.1 The tensor product . . . 15
1.3.2 Principal invariants of a second-order tensor . . . 17
1.3.3 Inverse of a tensor . . . 21
1.3.4 Eigenvalues and eigenvectors of tensors . . . 26
1.4 Skew-Symmetric Tensors . . . 28
1.5 Orthogonal Tensors . . . 30
1.6 Symmetric Tensors . . . 39
1.6.1 Principal values and principal directions . . . 39
1.6.2 Positive definite tensors and the polar decomposition . . . 47
1.6.3 Isotropic functions . . . 52
1.7 Higher-Order Tensors . . . 59
1.8 Isotropic Tensors . . . 74
1.9 Differentiation of Tensors . . . 77
1.9.1 The directional derivative . . . 78
1.9.2 Product rule . . . 80
1.9.3 Chain rule . . . 81
1.9.4 Gradient, Divergence and Curl . . . 83
1.9.5 Examples . . . 96
1.10 Some Results in n-Dimensional Euclidean Spaces . . . 98
1.11 The Exponential and Logarithmic Functions . . . 110
1.12 Divergence and Stokes' Theorems . . . 119
1.13 Groups . . . 122

2 Kinematics **138**
2.1 Lagrangian and Eulerian Descriptions 139
2.2 Length, Area and Volume Elements in the Deformed Configuration 141
2.2.1 Length element in the deformed configuration: Strain tensors 141
2.2.2 Area element in the deformed configuration: The Piola transform . 148
2.2.3 Volume element in the deformed configuration 151
2.3 Velocity and Acceleration 151
2.4 Rate of Deformation 154
2.5 Examples of Simple Motions 160
2.5.1 Pure extension 160
2.5.2 Rigid body motion 162
2.5.3 Simple shear 162

3 Balance Laws **166**
3.1 The First Transport Theorem 167
3.2 Conservation of Mass 169
3.2.1 Lagrangian version 169
3.2.2 Eulerian version 170
3.3 The Second Transport Theorem 172
3.4 Balance of Linear Momentum 172
3.5 Balance of Angular Momentum 179
3.6 Properties of the Cauchy Stress Tensor 182
3.7 The Equations of Motion in the Reference Configuration 185
3.8 Variational Formulations 189
3.9 Energy Equation 192

4 Constitutive Equations **202**
4.1 Frame of Reference 203
4.2 Transformation of Kinematical Quantities 205
4.3 Principle of Frame-Indifference 208
4.4 Principle of Material Frame-Indifference 216
4.5 Constitutive Relations for Simple Materials 218
4.6 Material Symmetry 222
4.7 Classification of Materials 229

5 Nonlinear Elasticity **237**
5.1 Isotropic Elastic Particles 238
5.2 The Constitutive Equation of an Isotropic Solid for 'Small' Deformations . 241
5.3 Bounds on the Lame Constants 243
5.4 St Venant-Kirchhoff Materials 245

5.5 Hyperelastic Solids . . . 245
5.6 Isotropic Hyperelastic Solids . . . 251
5.7 The Elasticity Tensors . . . 255
5.8 Exact Solutions for Homogeneous, Compressible, Isotropic Elastic Materials 260
5.8.1 Uniaxial stretch . . . 260
5.8.2 Pure Shear . . . 262
5.8.3 Pure bending of a prismatic beam made of a particular St Venant-Kirchhoff material . . . 264
5.8.4 Torsion of a circular shaft made of a particular St Venant-Kirchhoff material . . . 266
5.9 Exact Solutions for Homogeneous, Incompressible, Isotropic Elastic Materials 268
5.9.1 Bending and stretching of a rectangular block . . . 270
5.9.2 Straightening, stretching and shearing a sector of a cylinder . . . 272
5.9.3 Torsion, inflation, bending etc. of an annular wedge . . . 273
5.9.4 Inflation/eversion of a spherical shell . . . 279
5.10 Nonuniqueness of Solutions in Elasticity . . . 280

6 Linearized Elasticity **287**
6.1 Kinematics . . . 287
6.2 Governing Equations . . . 293
6.3 Energy and Variational Formulations in Linearized Elasticity . . . 297
6.3.1 Single-field variational formulation . . . 297
6.3.2 Two-field and three-field variational formulations . . . 300
6.4 Uniqueness of Solution . . . 302
6.5 Exact Solutions of some Special Problems in Elasticity . . . 304
6.5.1 Torsion of a circular cylinder . . . 305
6.5.2 Torsion of non-circular bars . . . 307
6.5.3 Pure bending of prismatic beams . . . 322
6.5.4 Bending of prismatic beams by terminal loads . . . 327
6.5.5 Hollow cylinder/sphere subjected to uniform pressure . . . 341
6.5.6 Solid cylinder spinning about its axis . . . 344
6.5.7 Progressive waves . . . 346
6.6 General solutions for three-dimensional elasticity using potentials . . . 348
6.6.1 Cylindrical elastic inclusion in an infinite domain with a uniform state of stress at infinity . . . 356
6.6.2 Point load in an infinite elastic body (Kelvin problem) . . . 361
6.6.3 Point load acting normal to the boundary of an infinite half-space (Boussinesq problem) . . . 362
6.6.4 Spherical cavity in an infinite domain with a uniaxial state of stress at infinity . . . 363

6.6.5 Point load acting tangential to the boundary of an infinite half-space (Cerruti problem) 369

7 Thermomechanics **380**
7.1 Frame-Indifference Applied to the First Law of Thermodynamics 380
7.2 Consequences of The Second Law of Thermodynamics 384
7.2.1 Thermoelastic materials 384
7.2.2 Restrictions on the constitutive relations for fluids 391

8 Rigid-Body Dynamics **410**

A Orthogonal Curvilinear Coordinate Systems **433**

B Cylindrical Coordinate System **446**

C Spherical Coordinate System **451**

D Arbitrary Curvilinear Coordinate Systems **455**

E Matrix Representations of Tensors for Engineering Applications **469**

F A Note on Boundary Conditions **474**

Bibliography **478**

Index **487**
