Volume 447

RNA Turnover in  
Bacteria, Archaea and Organelles

*Edited by*

Lynne E. Maquat  
Cecilia M. Arraiano

# CONTENTS

<i>Contributors</i>	xv
<i>Preface</i>	xxiii
<i>Volumes in Series</i>	xxv

## **Section I. Bacteria** **1**

### **1. Analysis of RNA Decay, Processing, and Polyadenylation in *Escherichia coli* and Other Prokaryotes** **3**

Bijoy K. Mohanty, Hili Giladi, Valerie F. Maples, and Sidney R. Kushner

1. Introduction	4
2. General Considerations When Working with RNA	5
3. Isolation of Total RNA from Exponentially Growing Cells	7
4. Isolation of Total RNA from Stationary Phase Cells	10
5. Removal of DNA Contamination	11
6. RNA Yield and Purity Assessment	12
7. RNA Integrity Assessment	12
8. Isolation of Polyadenylated RNA	13
9. Northern Analysis	14
10. Analysis of RNA Polyadenylation in <i>E. coli</i>	20
11. Reverse Transcription PCR (RT-PCR) to Analyze 3'-ends of Specific Transcripts	23
12. Conclusion	28
Acknowledgments	28
References	28

### **2. Analyzing the Decay of Stable RNAs in *E. coli*** **31**

Zhongwei Li and Murray P. Deutscher

1. Introduction	32
2. Preparation of Stable RNA Substrates for <i>In Vitro</i> Degradation Assays	35
3. Detection of Degradation Products <i>In Vitro</i>	37
4. Examination of Stable RNA Decay <i>In Vivo</i>	38
5. Determination of the 3'- and 5'-Termini of Intermediates during the Processing and Degradation of Stable RNAs	39

6. Detection of Poly(A) Tails on Products Generated by Processing or Degradation of Stable RNA	43
7. Concluding Remarks	43
Acknowledgments	44
References	44
<b>3. Genomic Analysis of mRNA Decay in <i>E. coli</i> with DNA Microarrays</b>	<b>47</b>
Pei-Hsun Lin, Dharam Singh, Jonathan A. Bernstein, and Sue Lin-Chao	
1. Introduction	48
2. Experimental Strategy for mRNA Half-Life Analysis	49
3. Methods	51
4. Data Acquisition and Analysis	58
Acknowledgments	62
References	62
<b>4. Co-immunopurification of Multiprotein Complexes Containing RNA-Degrading Enzymes</b>	<b>65</b>
Agamemnon J. Carpousis, Vanessa Khemici, Soraya Ait-Bara, and Leonora Poljak	
1. Introduction	66
2. General Considerations	68
3. Materials	71
4. Protocols	72
5. Perspective	76
Acknowledgments	79
References	80
<b>5. PABLO Analysis of RNA: 5'-Phosphorylation State and 5'-End Mapping</b>	<b>83</b>
Helena Celesnik, Atilio Deana, and Joel G. Belasco	
1. Introduction	84
2. Concept	84
3. Detection Method	86
4. Efficiency of Ligation	87
5. Determining the 5'-Phosphorylation State of Long Transcripts	87
6. Ascertaining Whether the Decay of a Transcript Begins with Pyrophosphate Removal	89
7. PABLO Protocols	91
8. Alternative Method for Examining the Phosphorylation State of RNA	94
9. The Use of PABLO to Map the 5'-End of RNA	95
Acknowledgments	97
References	97

<b>6. A Proteomic Approach to the Analysis of RNA Degradosome Composition in <i>Escherichia coli</i></b>	<b>99</b>
Pierluigi Mauri and Gianni Dehò	
1. Introduction	100
2. Experimental Procedures	105
3. Perspective and Conclusion	113
Acknowledgments	115
References	115
<b>7. New Approaches to Understanding Double-Stranded RNA Processing by Ribonuclease III: Purification and Assays of Homodimeric and Heterodimeric Forms of RNase III from Bacterial Extremophiles and Mesophiles</b>	<b>119</b>
Wenzhao Meng, Rhonda H. Nicholson, Lillian Nathania, Alexandre V. Pertzov, and Allen W. Nicholson	
1. Introduction	120
2. Heterologous Expression, Affinity Purification, and Assays of <i>Aquifex aeolicus</i> and <i>Thermotoga maritima</i> RNases III	122
3. Production and Purification of <i>Escherichia coli</i> RNase III Heterodimers	126
References	128
<b>8. Characterizing Ribonucleases <i>In Vitro</i>: Examples of Synergies between Biochemical and Structural Analysis</b>	<b>131</b>
Cecília Maria Arraiano, Ana Barbas, and Mónica Amblar	
1. Introduction	132
2. RNase II D209N Mutant	133
3. Construction of RNase II Derivatives	134
4. Overexpression and Purification of RNase II and Its Derivatives	134
5. Analysis of Ribonucleolytic Activity	137
6. Studying the RNA-Binding Abilities	147
7. Structural Studies of RNase II	156
Acknowledgments	157
References	158
<b>9. The Role of RNA Chaperone Hfq in Poly(A) Metabolism: Methods to Determine Positions, Abundance, and Lengths of Short Oligo(A) Tails</b>	<b>161</b>
Philippe Régnier and Eliane Hajnsdorf	
1. Introduction	162
2. Global Analysis of Polyadenylated Transcripts	163

3.	RT-PCR–Based Analysis of 3′-RNA Ends	164
4.	Effect of Hfq on Polyadenylation of the <i>rpsO</i> Transcript	170
5.	A Method to Analyze Polyadenylation of Primary Transcripts	174
6.	Hfq Stimulates Poly(A) Synthesis	177
7.	Conclusion	177
	Acknowledgment	179
	References	179
<b>10.</b>	<b>Assaying DEAD-box RNA Helicases and Their Role in mRNA Degradation in <i>Escherichia coli</i></b>	<b>183</b>
	Agamemnon J. Carpousis, Vanessa Khemici, and Leonora Poljak	
1.	Introduction	184
2.	The RNA-Dependent ATPase Activity of RhIB	185
3.	The ATPase-Dependent RNA Helicase Activity of RhIB	187
4.	The RhIB-PNPase mRNA Degradation Pathway	188
5.	Discussion and Perspective	192
6.	Methods	193
	Acknowledgments	196
	References	196
<b>11.</b>	<b>Preparation of the <i>Escherichia coli</i> RNase E Protein and Reconstitution of the RNA Degradosome</b>	<b>199</b>
	George A. Mackie, Glen A. Coburn, Xin Miao, Douglas J. Briant, Annie Prud'homme-Généreux, Leigh M. Stickney, and Janet S. Hankins	
1.	Introduction	200
2.	Preparation of Crude RNase E	201
3.	Purification of RNase E	204
4.	Reconstitution of the RNA Degradosome	207
	Acknowledgments	211
	References	211
<b>12.</b>	<b>Identifying and Characterizing Substrates of the RNase E/G Family of Enzymes</b>	<b>215</b>
	Louise Kime, Stefanie S. Jourdan, and Kenneth J. McDowall	
1.	Introduction to <i>E. coli</i> RNase E and its Homologs	216
2.	Identification of Potential <i>In Vivo</i> Substrates of RNase E	219
3.	Identification of Sites of Endonucleolytic Cleavage	223
4.	Reconstitution of Cleavages <i>In Vitro</i>	228
5.	Summary	235
	Acknowledgments	236
	References	236

<b>13. Construction and Characterization of <i>E. coli</i> K12 Strains in Which the Transcription of Selected Genes Is Desynchronized from Translation</b>	<b>243</b>
Florence Proux and Marc Dreyfus	
1. Introduction	244
2. Desynchronizing the Transcription and Translation of the <i>lacZ</i> Gene in <i>E. coli</i> K12	246
3. Specific Protocols	252
4. Conclusion	255
Acknowledgments	256
References	256
<b>14. Analysis of mRNA Decay in <i>Bacillus subtilis</i></b>	<b>259</b>
David H. Bechhofer, Irina A. Oussenko, Gintaras Deikus, Shiyi Yao, Nathalie Mathy, and Ciarán Condon	
1. Introduction	260
2. Growth Media for Isolation of RNA	263
3. Inhibition of <i>B. subtilis</i> Transcription	263
4. RNA Isolation Protocol 1	264
5. RNA Isolation Protocol 2	265
6. RNA Isolation Protocol 3	266
7. Gel Electrophoresis and Blotting	267
8. Labeled Size Marker for Small RNAs	267
9. Northern-Blot Analysis Using Oligonucleotide Probes	268
10. Northern-Blot Analysis Using Riboprobes	269
11. Quantitation of RNA by 5S RNA Probing	269
12. Mapping of 5'- and 3'-Ends	269
13. Sequencing-Gel Northern Blotting	271
14. Ribonuclease Mutant Strains	271
References	275
<b>15. Assay of <i>Bacillus subtilis</i> Ribonucleases <i>In Vitro</i></b>	<b>277</b>
Ciarán Condon, Olivier Pellegrini, Nathalie Mathy, Lionel Bénard, Yulia Redko, Irina A. Oussenko, Gintaras Deikus, and David H. Bechhofer	
1. Introduction	278
2. Purification and Assay of <i>B. subtilis</i> Endoribonucleases	278
3. Purification and Assay of <i>B. subtilis</i> Exoribonucleases	296
4. Conclusion	303
Acknowledgments	303
Appendices	303
References	306

<b>16. <i>Staphylococcus aureus</i> Endoribonuclease III: Purification and Properties</b>	<b>309</b>
Clément Chevalier, Eric Huntzinger, Pierre Fechter, Sandrine Boisset, François Vandenesch, Pascale Romby, and Thomas Geissmann	
1. Introduction	310
2. <i>S. aureus</i> RNase III Is Not Essential for Cell Growth but Regulates Virulence Gene Expression	312
3. Biochemical Properties and Substrate Specificity of <i>S. aureus</i> RNase III	314
4. RNase III Overexpression and Purification	317
5. RNA Substrate Preparation	319
6. End-labeling of RNA	320
7. Mapping the RNase III Cleavage Sites <i>In Vitro</i>	320
8. Denaturing Agarose Gel Electrophoresis and Northern Blotting	322
9. Concluding Remarks	323
Acknowledgments	324
References	324
<b>17. Studying tmRNA-Mediated Surveillance and Nonstop mRNA Decay</b>	<b>329</b>
Thomas Sundermeier, Zhiyun Ge, Jamie Richards, Daniel Dulebohn, and A. Wali Karzai	
1. Introduction	330
2. Methodology	334
3. Activity Assays	341
Acknowledgments	356
References	356
<b>18. Analyses of mRNA Destabilization and Translational Inhibition Mediated by Hfq-Binding Small RNAs</b>	<b>359</b>
Teppei Morita, Kimika Maki, Mieko Yagi, and Hiroji Aiba	
1. Overview	360
2. The <i>ptsG</i> mRNA Is Destabilized in Response to Glucose Phosphate Stress	362
3. Requirement of C-Terminal Scaffold Region of RNase E, Hfq, and SgrS	365
4. Identification of Ribonucleoprotein Complex Containing SgrS, Hfq, and RNase E	366
5. Translational Repression is the Primary Event for Silencing of <i>ptsG</i> mRNA by SgrS/Hfq/RNase E	368

6. Base-Pairing Near Translation Initiation Region Is Crucial for SgrS Action	370
7. Base Pairing between SgrS and <i>ptsG</i> mRNA <i>In Vitro</i> and Acceleration of Duplex Formation by Hfq	372
8. Membrane Localization of <i>ptsG</i> mRNA Is Required for SgrS Action	374
9. Conclusions	375
Acknowledgments	376
References	376
<b>Section II. Archaea</b>	<b>379</b>
<b>19. <i>In Vivo</i> and <i>In Vitro</i> Studies of RNA Degrading Activities in Archaea</b>	<b>381</b>
Elena Evguenieva-Hackenberg, Steffen Wagner, and Gabriele Klug	
1. Introduction	383
2. <i>In Vivo</i> Studies on RNA Degrading Activities in Archaea	384
3. <i>In Vitro</i> Studies on Novel RNA Degrading Activities in Archaea	388
4. Isolation and Characterization of a Protein Complex with Predicted Ribonuclease Activity from <i>Sulfolobus solfataricus</i> : The Archaeal Exosome	401
Acknowledgments	413
References	413
<b>20. Expression, Reconstitution, and Structure of an Archaeal RNA Degrading Exosome</b>	<b>417</b>
Esben Lorentzen and Elena Conti	
1. Introduction	418
2. Cloning, Expression, Purification, and Reconstitution of an Archaeal Exosome	420
3. Archaeal Exosome Structure	425
4. RNA Binding Sites in the Archaeal Exosome	428
Acknowledgments	433
References	433
<b>Section III. Organelles</b>	<b>437</b>
<b>21. Polyadenylation-Mediated RNA Degradation in Plant Mitochondria</b>	<b>439</b>
Sarah Holec, Heike Lange, André Dietrich, and Dominique Gagliardi	
1. Introduction	440
2. Identification of Polyadenylated Substrates Destined for RNA Degradation	441

3. Tools to Investigate the Process of Polyadenylation-Mediated RNA Degradation	452
Acknowledgments	459
References	459
<b>22. <i>In Vivo</i> and <i>In Vitro</i> Approaches for Studying the Yeast Mitochondrial RNA Degradosome Complex</b>	<b>463</b>
Michal Malecki, Robert Jdrzejczak, Olga Puchta, Piotr P. Stepien, and Pawel Golik	
1. Introduction	464
2. Genetics of the <i>S. cerevisiae</i> Mitochondrial Degradosome	466
3. RNA Metabolism in the Mitochondria of Degradosome-Deficient Strains	469
4. Expression and Purification of the Yeast Mitochondrial Degradosome Subunits in <i>E. coli</i>	472
5. Assaying the Ribonuclease Activity of the Degradosome and the Dss1 Protein	475
6. Assaying the ATP Hydrolysis Activity of the Degradosome and the Suv3 Protein	480
7. Assaying the Helicase Activity of the Degradosome and the Suv3 Protein	481
8. Protein-RNA Binding Assay	484
9. Concluding Remarks	485
Acknowledgments	486
References	486
<b>23. Measuring mRNA Decay in Human Mitochondria</b>	<b>489</b>
Asuteka Nagao, Narumi Hino-Shigi, and Tsutomu Suzuki	
1. Introduction	490
2. Quantitative RT-PCR Method for Measuring mRNA Decay	491
3. Primer Design	491
4. EtBr Treatment	493
5. Cell Cultivation and RNA Extraction	493
6. RT-PCR	494
7. Half-Lives of Mitochondrial mRNAs	494
8. Polyadenylation Stabilizes Mitochondrial mRNAs	494
9. Discussion	496
Acknowledgments	498
References	498

<b>24. Detection and Characterization of Polyadenylated RNA in Eukarya, Bacteria, Archaea, and Organelles</b>	<b>501</b>
Shimyn Slomovic, Victoria Portnoy, and Gadi Schuster	
1. Introduction	502
2. Oligo(dT) RT-PCR Detection of Polyadenylated Degradation Intermediates	504
3. Circularized Reverse Transcription (cRT)-PCR-Sequencing/ Labeling Method for the Characterization of Polyadenylated RNA	509
4. cRT-PCR for the Detection of Truncated Polyadenylated RNA Degradation Intermediates	516
References	519
<b>25. RNA Decay by Messenger RNA Interferases</b>	<b>521</b>
Mikkel Christensen-Dalsgaard, Martin Overgaard, Kristoffer Skovbo Winther, and Kenn Gerdes	
1. Introduction	522
2. <i>In Vitro</i> Analysis of RelE mRNA interferase	523
3. <i>In Vivo</i> Analysis of mRNA interferase	527
References	534
