

# Perfecting the Pig Environment

*Paul Smith, Hugh Crabtree and Nick Bird*

**Nottingham**  
University Press

# CONTENTS

	Preface	v
	Introduction	vii
1	Environmental monitoring – theory, common practice and best practice.	1
2	The impact of stocking density – pigs generates heat and increasingly need space.	11
3	Data interpretation – making the most of environmental monitoring.	15
4	Temperature monitoring – a good starting point for fine-tuning the pig environment.	19
5	Ventilation – the ultimate practical compromise.	29
6	Feed and water – always needed but rarely measured.	43
7	The consequences of excessive temperature build-up.	59
8	I.T. – the global driver of future pig production.	73
