

COASTAL WETLANDS

AN INTEGRATED ECOSYSTEM APPROACH

EDITED BY

GERARDO M.E. PERILLO • ERIC WOLANSKI
DONALD R. CAHOON • MARK M. BRINSON

CONTENTS

<i>Preface</i>	xix
<i>List of Contributors</i>	xxi
<i>List of Reviewers</i>	xxxix

1 Coastal Wetlands: A Synthesis	1
Eric Wolanski, Mark M. Brinson, Donald R. Cahoon and Gerardo M.E. Perillo	
1 Introduction	1
2 A Synthesis of Coastal Wetlands Science	2
2.1 Geography	3
2.2 Geomorphology evolution under climate change	4
2.3 The influence of vegetation on the geomorphology evolution with climate change	6
2.4 The stabilizing role of vegetation	9
2.5 State change and coastal evolution	13
2.6 The role of physical disturbances	14
2.7 The role of herbivores	18
2.8 Observations across ecosystem types	21
2.9 The human impact	28
2.10 Modeling and predictions	31
2.11 Coastal wetland ecosystems as a component of estuaries	32
2.12 Coastal wetland socioeconomics	34
2.13 Coastal wetlands are essential for our quality of life	38
3 Lessons from the Chapters in this Book	43
3.1 Coastal wetlands as ecosystems	44
3.2 Physical processes	45
3.3 Tidal flats	47
3.4 Marshes and seagrasses	48
3.5 Mangroves	51
3.6 Coastal wetland restoration and management	53
3.7 Coastal wetland sustainability and landscape dynamics	56
References	57

Part I Coastal Wetlands as Ecosystems **63**

2 The Morphology and Development of Tropical Coastal Wetlands	65
Colin D. Woodroffe and Gareth Davies	
1 Introduction	65
2 Mangrove and Associated Wetlands	66

3	Sedimentation and the Development of Wetlands	69
4	Sea-Level Controls on Wetland Development	71
5	Sea-Level Change and the Diversification of West Indian Mangroves	74
6	Sea-Level Change and the Evolution of Mangrove Habitats in the IWP	76
7	Impact of Future Climate and Sea-Level Change	80
8	Summary and Concluding Remarks	82
	References	83

3 Temperate Coastal Wetlands: Morphology, Sediment Processes, and Plant Communities **89**

Paula D. Pratolongo, Jason R. Kirby, Andrew Plater and Mark M. Brinson

1	Introduction	89
2	Factors Controlling Sediment Dynamics	91
2.1	The "ramp" model of salt marsh accretion	92
2.2	The "creek" model of salt marsh accretion	93
2.3	Storms and salt marsh erosion	94
3	Factors Controlling Patterns of Vegetation	95
3.1	Zonation of vegetation	95
3.2	Ecological development	96
4	Geographic Variation	97
4.1	Northern Europe	97
4.2	Eastern North America	98
4.3	Western North America	103
4.4	Mediterranean	104
4.5	Eastern Asia	104
4.6	Australasia	105
4.7	South America	107
5	Human Impact and Climate Change	108
5.1	Human impact	108
5.2	Climate and sea-level change	110
6	Summary	111
	References	112

4 Polar Coastal Wetlands: Development, Structure, and Land use **119**

I. Peter Martini, Robert L. Jefferies, R. I. Guy Morrison and Kenneth F. Abraham

1	Introduction	119
2	Geology/Geomorphology	121
3	Oceanography	124
4	Climate	125
5	Structure of Coastal Wetlands	127
6	Vegetation of Polar Coastal Wetlands	133
7	Fauna of Polar Coastal Wetlands	136
7.1	Invertebrate fauna	137
7.2	Vertebrate fauna using coastal wetlands	140

8	Environmental Hazards	147
9	Conclusions and Research Priorities	148
	References	149

Part II Physical Processes 157

5 Intertidal Eco-Geomorphological Dynamics and Hydrodynamic Circulation 159

Andrea D'Alpaos, Stefano Lanzoni, Andrea Rinaldo and
Marco Marani

1	Introduction	159
2	Intertidal Eco-Geomorphological Evolution	163
2.1	<i>Poisson hydrodynamic model</i>	164
2.2	Model of channel network early development	165
2.3	Model of marsh platform evolution	168
3	Results	171
4	Discussion	177
5	Conclusions	178
	Acknowledgments	179
	References	179

6 Tidal Courses: Classification, Origin, and Functionality 185

Gerardo M.E. Perillo

1	Introduction	185
2	Proposed Tidal Course Classification	187
3	Geomorphology of Tidal Courses	189
4	Course Networks and Drainage Systems	196
5	Origin of Tidal Courses	198
6	Course Evolution	203
7	Summary	206
	Acknowledgments	206
	References	206

7 Heat Energy Balance in Coastal Wetlands 211

María Cintia Piccolo

1	Introduction	211
2	Mid-Latitudes	215
3	Low Latitudes	220
4	High Latitudes	222
5	Summary	225
	Acknowledgments	226
	References	226

8	Hydrodynamics and Modeling of Water Flow in Mangrove Areas	231
	<i>Yoshihiro Mazda and Eric Wolanski</i>	
1	Introduction	231
1.1	Peculiar hydrodynamics in mangrove area	233
1.2	Material dispersion	233
1.3	Holistic system	233
2	Physical Characteristics of Mangrove Topography and Vegetation	233
2.1	Classification of mangrove topography	234
2.2	Bottom condition of mangrove swamps	236
2.3	Influence of the vegetation on the hydrodynamics	236
3	Peculiar Hydrodynamics in Mangrove Areas	240
3.1	General equations that control water flow	240
3.2	Timescales of flow system	241
4	Modeling	245
4.1	Hydraulic model	245
4.2	Material dispersion model	251
4.3	Ecosystem model as the holistic system	255
5	Summary	257
	<i>Acknowledgments</i>	258
	<i>References</i>	258
9	Mathematical Modeling of Tidal Flow over Salt Marshes and Tidal Flats with Applications to the Venice Lagoon	263
	<i>Luigi D'Alpaos, Luca Carniello and Andrea Defina</i>	
1	Introduction	263
2	Wetting and Drying, and the Dynamics of Very Shallow Flows	265
3	Wind and Wind Waves	272
4	Salt Marsh Vegetation	279
5	Salt Marshes and Tidal Flats Morphodynamics	281
6	Conclusions	285
	<i>Acknowledgments</i>	286
	<i>References</i>	286
Part III	Tidal Flats	293
10	Geomorphology and Sedimentology of Tidal Flats	295
	<i>Shu Gao</i>	
1	Introduction	295
2	Basic Conditions for the Formation of Tidal Flats	297
3	Zonation in Sedimentation and Flat Surface Morphology	298
3.1	Vertical sediment sequences	298
3.2	Sediment and morphology on intertidal mud flats	300
3.3	Sediment and morphology on mixed sand–mud flats	303
3.4	Sediment and morphology on sand flats	305

4	Factors and Processes	305
4.1	<i>Influences of quantity and composition of sediment supply</i>	305
4.2	Sedimentation during tidal cycles	308
4.3	Long-term accretion–erosion cycles	310
4.4	Tidal creek systems	311
5	Summary	311
	Acknowledgments	312
	References	312

11 Intertidal Flats: Ecosystem Functioning of Soft Sediment Systems 317

David M. Paterson, Rebecca J. Aspden and Kevin S. Black

1	Introduction	317
2	The Depositional Habitat	319
2.1	The physical background to life in depositional habitats	321
2.2	The functional difference between mud and sand systems	324
3	The Functional Role of Biota	328
3.1	Patterns of life	328
3.2	Effects of sediment disturbance	331
3.3	Biodiversity impacts	333
3.4	Distribution in space and time	334
3.5	Trophic structure	335
3.6	New functional groups?	336
4	Future Shock: Climate Change and Ecosystem Function	337
	Acknowledgments	338
	References	338

12 Biogeochemical Dynamics of Coastal Tidal Flats 345

Samantha B. Joye, Dirk de Beer and Perran L.M. Cook

1	Introduction	345
2	Transport Processes on Intertidal Flats	347
3	Microbial Processes	350
3.1	Organic matter sources	351
4	Nitrogen Cycle	352
4.1	Nitrogen fixation	352
4.2	Nitrification and nitrate reduction	354
4.3	Exchange of dissolved nitrogen between the sediment and the water column	357
4.4	Benthic microalgal N assimilation	358
5	Phosphorus Cycle	359
6	Silicon Cycle	362
7	Concluding Remarks	364
	Acknowledgments	365
	References	365

Part IV Marshes and Seagrasses

375

13 Productivity and Biogeochemical Cycling in Seagrass Ecosystems

377

Marianne Holmer

1	Introduction	377
1.1	Primary productivity	378
1.2	Fate of primary productivity – export and burial	380
2	Sediment Biogeochemistry – Modified by Seagrasses	383
2.1	Microscale effects	391
2.2	Nutrient cycling – importance of root uptake	392
3	Human Pressures and Effects on Biogeochemistry	393
4	Future Perspectives and Conclusions	395
	Acknowledgment	396
	References	396

14 Tidal Salt Marshes: Geomorphology and Sedimentology

403

John R.L. Allen

1	Introduction	403
2	Geographical Distribution	405
3	Why Salt Marshes Exist?	405
4	Geomorphology	406
4.1	Marsh evolution versus inheritance	406
4.2	Marsh edges and coastal change	406
4.3	Marsh terraces	407
4.4	Channels, creeks, and gullies	407
4.5	Creek networks	408
5	Morphodynamics	409
5.1	Tidal regime	409
5.2	Sediment sources and supply	409
5.3	Channelized flows	409
5.4	Platform flows	410
5.5	Accretion, compaction, and sea level change	410
6	Sedimentology	412
6.1	Grain size	412
6.2	Tidal bedding	413
6.3	Lithostratigraphic architecture	416
7	Concluding Discussion	417
	References	417

15 Ecosystem Structure of Tidal Saline Marshes

425

Jenneke M. Visser and Donald M. Baltz

1	Introduction	425
2	Saline Marsh Communities	426
2.1	Emergent vegetation	426
2.2	Benthic algae	428

2.3	Nekton	428
2.4	Reptiles	429
2.5	Birds	430
2.6	Mammals	430
3	<i>Interaction among Communities</i>	430
3.1	Effects of animals on emergent vegetation distribution	430
3.2	<i>Emergent vegetation as animal habitat</i>	431
3.3	Nursery function	432
3.4	Saline marsh food webs	433
	Acknowledgments	438
	References	438

16 Salt Marsh Biogeochemistry – An Overview **445**

Craig Tobias and Scott C. Neubauer

1	Introduction	445
2	Carbon	446
2.1	Exchanges	446
2.2	Internal cycling	449
2.3	Burial	455
3	Nitrogen	455
3.1	Exchanges	455
3.2	Internal cycling	462
3.3	Burial	464
4	Iron and Sulfur	465
4.1	Exchanges	465
4.2	Internal cycling	468
4.3	Burial	471
5	Phosphorus	471
5.1	Exchanges	472
5.2	Internal cycling	475
5.3	Burial	477
6	Marshes in Transition and Directions for Future Work	477
	Acknowledgments	478
	References	479

17 The Role of Freshwater Flows on Salt Marsh Growth and Development **493**

Laurence A. Boorman

1	Introduction	493
2	Freshwater Routes in Salt Marshes	494
2.1	Stream flow	495
2.2	Groundwater flow	497
2.3	<i>Rainfall</i>	499
2.4	Surface flow	500

3	Associated Processes	500
3.1	Nutrient transport	500
3.2	Sediment transport	502
3.3	Organic matter transport	504
3.4	Pollutants	504
3.5	Salinity changes	505
4	Hydrological Impacts in Salt Marshes	507
5	Techniques for the Study of Marsh Hydrology	508
6	Implications of Freshwater Flows for Salt Marsh Management	509
7	Implications of Freshwater Flows for Salt Marsh Creation	509
8	The Ecohydrological Approach in Salt Marsh Studies	511
9	The Way Ahead – Problems and Challenges	512
	References	512

18 Tidal Freshwater Wetlands 515

Dennis F. Whigham, Andrew H. Baldwin and Aat Barendregt

1	Introduction	515
2	Hydrogeomorphic Setting	516
3	Biodiversity	519
3.1	Plants	519
3.2	Animals	523
4	Primary Production and Nutrient Cycling	527
5	Threats and Future Prospectus	528
	References	530

19 Biogeochemistry of Tidal Freshwater Wetlands 535

J. Patrick Megonigal and Scott C. Neubauer

1	Introduction	535
2	Carbon Biogeochemistry	536
2.1	Carbon inputs	536
2.2	Carbon outputs	538
3	Processes Governing Organic Carbon Metabolism	542
3.1	Anaerobic respiration	543
3.2	Processes regulating methane production, oxidation, and emission	545
4	Nitrogen Biogeochemistry	546
4.1	Nitrogen exchanges	548
4.2	Nitrogen transformations	550
4.3	Nutrient regulation of plant production	551
5	Phosphorus Biogeochemistry	552
6	Silicon Biogeochemistry	554
7	Biogeochemical Effects of Sea-Level Rise	554
8	Concluding Comments	555
	Acknowledgments	556
	References	556

Part V Mangroves	563
20 Geomorphology and Sedimentology of Mangroves	565
Joanna C. Ellison	
1 Introduction	565
2 Mangrove Environmental Settings	566
2.1 Terrigenous settings	566
2.2 Islands	570
2.3 Inland mangroves	570
3 Tidal Range and Sea-Level Control	572
4 Sedimentation in Mangroves	573
4.1 Excessive sedimentation	575
5 Mangroves as Sea-Level Indicators	577
6 Storms/Tsunamis	582
7 Inundation Changes Affecting Mangroves	583
8 Conclusions	585
Acknowledgment	585
References	585
21 Geomorphology and Sedimentology of Mangroves and Salt Marshes: The Formation of Geobotanical Units	593
Rubén J. Lara, Claudio F. Szlafsztein, Marcelo C.L. Cohen, Julian Oxmann, Bettina B. Schmitt and Pedro W.M. Souza Filho	
1 Driving Forces Determining Main Morphology and Vegetation Types in the Coastal Zone	593
2 <i>Depositional Environment and Substrate Formation for the Development of Mangroves and Salt Marshes</i>	595
3 Influence of Sea Level and Climate Oscillations on Local Geobotanical Features	597
4 Major Factors Leading to the Development of Salt Marshes and Mangroves at the Amazon Coastal Region: An Integrated Analysis	599
5 Influence of Geomorphology and Inundation Regime of Geobotanical Units on their Sediment Biogeochemistry	600
5.1 Regularly inundated wetlands	601
5.2 Rarely inundated wetlands	604
5.3 Waterlogged wetlands	606
5.4 Salt marshes and mangroves: Nutrient sources or sinks?	607
References	608
22 Paradigm Shifts in Mangrove Biology	615
Daniel M. Alongi	
1 Introduction	615
2 Shifts in Established Paradigms	616
2.1 Rates of mangrove net primary productivity rival those of other tropical forests	616

2.2	Mangrove forests appear to be architecturally simple, but factors regulating succession and zonation are complex	622
2.3	Mangrove tree growth is not constant but related to climate patterns	624
2.4	Tree diversity is low, but faunal and microbial diversity can be high	624
2.5	Arboreal communities are important in food webs, exhibiting predatory, symbiotic, and mutualistic relations	626
2.6	Plant–Microbe–Soil Relations are tightly linked and help conserve scarce nutrients	627
2.7	Crabs are keystone species influencing function and structure in many, but not all, mangrove forests	628
2.8	Algae, not just detritus, are a significant food resource	630
2.9	Mangroves are an important link to fisheries	631
2.10	Mangroves are chemically diverse and a good source of natural products	632
3	Conclusions	633
	References	634

23 Ecogeomorphic Models of Nutrient Biogeochemistry for Mangrove Wetlands **641**

Robert R. Twilley and Victor H. Rivera-Monroy

1	Introduction	641
2	Ecogeomorphology of Mangroves (Model 1)	648
3	A Multigradient Model (Model 2)	649
4	Geochemical Model (Model 3)	653
4.1	Redox zones in mangrove soils	653
4.2	Transition from reduced to oxidized zones	654
4.3	Hydroperiod effects on transition zones	655
4.4	Lower oxidation zone	656
4.5	Linkages in multigradient and geochemical models	657
5	Soil Biogeochemistry Model (NUMAN, Model 4)	659
6	Mass Balance Exchange (Model 5)	662
6.1	CO ₂ efflux from mangrove sediments and tidal waters	662
6.2	The balance of N fixation and denitrification	663
6.3	Tidal exchange	671
7	Contrasting Coastal Settings and Biogeochemical Models	672
	Acknowledgments	675
	References	675

Part VI Coastal Wetland Restoration and Management **685**

24 Seagrass Restoration **687**

Eric I. Paling, Mark Fonseca, Marieke M. van Katwijk and Mike van Keulen

1	Introduction	687
2	Regional Activities	689

2.1	Europe	689
2.2	Australia	693
2.3	Oceania	695
2.4	Southeast Asia	696
2.5	China and Japan	697
2.6	New Zealand and the Pacific Islands	698
2.7	United States	699
3	Policy Issues Relevant to Mitigation	701
3.1	Costs of restoration	702
3.2	Valuation of ecosystem services	703
4	Conclusions	704
	Acknowledgments	704
	References	705

25 Tidal Marsh Creation 715

Stephen W. Broome and Christopher B. Craft

1	Introduction	715
2	Principles and Techniques of Tidal Marsh Creation	716
2.1	Site selection	717
2.2	Conceptual design	717
2.3	Hydrology	718
2.4	Soil	719
2.5	Establishing vegetation	720
3	Evaluating Functional Equivalence of Created Tidal Marshes	723
3.1	Biological productivity and food webs	723
3.2	Biogeochemical cycles	730
4	Summary	733
	References	733

26 Salt Marsh Restoration 737

Paul Adam

1	Introduction	737
2	Setting Objectives	738
3	Planning for the Future	740
4	Addressing Causes and not Symptoms	744
5	Managing Disturbance	745
5.1	Restoring hydrology	745
5.2	Managing weeds	746
5.3	Introduced fauna	749
5.4	Grazing	750
5.5	Pollution	751
6	Conflicting Priorities	754
7	Discussion	755
8	Conclusions	756
