## building structures

second edition from concepts to design

malcolm millais

## Contents

	Preface to the Second Edition	Viii
INT	RODUCTION	1
0.1	Pre-historic design	1
0.2	Traditional design	2
0.3	The effect of civilisation	4
0.4	The search for structural understanding	6
0.5	The modern approach to structural design	9
0.6	The conceptual understanding of structural behaviour	10
	References – Introduction	12
CHA	APTER 1 Loads and load paths	13
1.1	Natural loads	13
1.2	Useful loads	19
1.3	Accidental loads	21
1.4	Loading summary	21
1.5	Reaction loads	24
1.6	Load paths	30
	NOTED 2. Intermed forces	
CHA	APTER 2 Internal forces	37
2.1	APTER 2 Internal forces  Axial forces	<b>37</b> 37
2.1	Axial forces	37
2.1 2.2 2.3 2.4	Axial forces Bending moments and shear forces	37 39
2.1 2.2 2.3 2.4 2.5	Axial forces Bending moments and shear forces A simple plane frame	37 39 43
2.1 2.2 2.3 2.4 2.5 2.6	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces	37 39 43 49 50 54
2.1 2.2 2.3 2.4 2.5	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths	37 39 43 49 50
2.1 2.2 2.3 2.4 2.5 2.6 2.7	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces	37 39 43 49 50 54
2.1 2.2 2.3 2.4 2.5 2.6 2.7 CHA	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces Summary	37 39 43 49 50 54 55
2.1 2.2 2.3 2.4 2.5 2.6 2.7 CHA 3.1 3.2	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces Summary  APTER 3 Structural element behaviour	37 39 43 49 50 54 55
2.1 2.2 2.3 2.4 2.5 2.6 2.7 <b>CHA</b> 3.1 3.2 3.3	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces Summary  APTER 3 Structural element behaviour Structural elements Concepts of stress and stress distribution Axial stresses	37 39 43 49 50 54 55 <b>57</b>
2.1 2.2 2.3 2.4 2.5 2.6 2.7 <b>CHA</b> 3.1 3.2 3.3 3.4	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces Summary  APTER 3 Structural element behaviour Structural elements Concepts of stress and stress distribution Axial stresses Bending stresses	37 39 43 49 50 54 55 <b>57</b> 57
2.1 2.2 2.3 2.4 2.5 2.6 2.7 <b>CHA</b> 3.1 3.2 3.3 3.4 3.5	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces Summary  APTER 3 Structural element behaviour Structural elements Concepts of stress and stress distribution Axial stresses Bending stresses Shear stresses	37 39 43 49 50 54 55 <b>57</b> 60 65 68
2.1 2.2 2.3 2.4 2.5 2.6 2.7 <b>CHA</b> 3.1 3.2 3.3 3.4 3.5 3.6	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces Summary  APTER 3 Structural element behaviour Structural elements Concepts of stress and stress distribution Axial stresses Bending stresses Shear stresses Torsional stresses	37 39 43 49 50 54 55 <b>57</b> 60 65 68 76
2.1 2.2 2.3 2.4 2.5 2.6 2.7 <b>CHA</b> 3.1 3.2 3.3 3.4 3.5	Axial forces Bending moments and shear forces A simple plane frame Slabs The structural action of load paths Twisting forces Summary  APTER 3 Structural element behaviour Structural elements Concepts of stress and stress distribution Axial stresses Bending stresses Shear stresses	37 39 43 49 50 54 55 <b>57</b> 60 65 68

CHAPTER 4 Advanced concepts of stress 86				
4.1 4.2 4.3 4.4 4.5 4.6 4.7 4.8	Principal stresses in one-dimensional elements Principal stresses in two-dimensional elements The role of shear stresses in beams Effect of beam cross-section Biaxial bending Torsion and warping of open sections Composite elements and pre-stressing Summary References – Chapter 4	86 92 95 99 103 106 107 116		
CHAPTER 5 Structural materials		117		
5.1 5.2 5.3 5.4	Types of material behaviour Actual structural materials Soil as a structural material Non-structural effects	117 120 122 130		
CHAPTER 6 Safe structures and failure		134		
6.1 6.2 6.3 6.4 6.5	Basic concepts of safety Types of structural collapse Plastic behaviour Axial instability Relationship of structural theories References - Chapter 6	134 145 148 154 163 167		
CHAPTER 7 Geometry and structural behaviour		168		
7.1 7.2 7.3 7.4 7.5 7.6	Geometry of structures The behaviour of structural systems Trusses and frames Cables and arches Three-dimensional structures Prevention of axial instability	168 170 178 186 188 190		
СНА	PTER 8 Behaviour of a simple building	193		
8.1 8.2 8.3 8.4 8.5 8.6 8.7	Basic structure and loading The roof and walls The portal frames The wind bracing system The floor structure The foundations Summary	193 201 205 207 209 209 211		
CHAPTER 9 Real structures		212		
9.1 9.2 9.3 9.4 9.5 9.6	Durham Cathedral The Palm House Zarzuela Hippodrome CNIT Exposition Palace Federal Reserve Bank Bank of China References - Chapter 9	213 220 229 235 242 248 256		
CHAPTER 10 Structural conception		257		
10.1 10.2 10.3	Structures in buildings Conceptual load paths Load path geometry	257 259 262		

10.4 10.5 10.6 10.7	Overall structural behaviour Choice of materials and elements Element connection Structures and building construction	264 268 273 279
СНА	PTER 11 Structures and built form	284
11.1	The masonry dome and Christopher Wren	285
11.2	The arrival of the skeletal structure	293
11.3	Engineers, architects, decoration and theory	297
11.4	Architects embrace engineering	300
11.5	Engineering as fantasy	304
11.6	Engineered curved structures	308
11.7	Engineering fantasy becomes reality	314
11.8	Guggenheim, computers and beyond	323
	References – Chapter 11	327
CHA	PTER 12 A simple approach to calculations	330
12.1	The basic questions	331
12.2	Units	331
12.3	Real loads	332
12.4	The beam and the cantilever	335
12.5	More complex beams	341
12.6	Simple frames	346
12.7	Calculation of stresses in beams and columns	349
12.8	Triangulated structures	353
12.9	Deflection and stiffness	356
	Slenderness and axial stability Four examples of simple calculations	361
	Summary	363 371
12.12	References – Chapter 12	371
СПУ	PTER 13 The mathematical basis	373
13.1	Functions and differentiation	373
13.2 13.3	Integration The existly leaded element	379
13.4	The axially loaded element The laterally loaded beam	381 386
13.5	The general beam element	396
13.6	Joint stiffness	403
13.7	The stiffness method	407
13.8	Summary	414
10.0	References – Chapter 13	415
	Further Reading	416
	Index	418
