

Acoustic & Electromagnetic Scattering Analysis

Using Discrete Sources

Adrian Doicu, Yuri Eremin and Thomas Wriedt

CONTENTS

PREFACE ix

ACKNOWLEDGMENTS xiii

I

ELEMENTS OF FUNCTIONAL ANALYSIS

1. Hilbert spaces. Orthogonal projection operator 2
2. Closed and complete systems in Hilbert spaces. Bases 6
3. Projection methods 10

II

THE SCALAR HELMHOLTZ EQUATION

1. Boundary-value problems in acoustic theory 18
2. Single- and double-layer potentials 23
3. Green's formulas and solution estimates 32
4. General null-field equations in acoustic theory 35
5. Notes and comments 38

III

SYSTEMS OF FUNCTIONS IN ACOUSTIC THEORY

1. Complete systems of functions 40
2. Linear independent systems of functions 60
3. Notes and comments 65

IV

DISCRETE SOURCES METHOD IN ACOUSTIC THEORY

1. Basic concepts 68
2. Numerical implementation 73
3. Model with distributed spherical wave functions 86
4. Notes and Comments 91

V

NULL-FIELD METHOD IN ACOUSTIC THEORY

1. Basic concepts 93
2. Conventional null-field method 95
3. Notes and comments 106

VI

THE MAXWELL EQUATIONS

1. Boundary-value problems in electromagnetic theory 108
2. Vector potentials 112
3. Stratton-Chu formulas and solution estimates 122
4. General null-field equations in electromagnetic theory 129

VII

SYSTEMS OF FUNCTIONS IN ELECTROMAGNETIC THEORY

1. Complete systems of functions 138
2. Linear independent systems of functions 185
3. Notes and Comments 193

VIII

PROJECTION METHODS IN ELECTROMAGNETIC THEORY

1. Projection methods for the exterior Maxwell problem 195
2. Projection methods for the transmission problem 198

IX

DISCRETE SOURCES METHOD IN ELECTROMAGNETIC THEORY

1. Projection methods 204
2. Model with distributed vector multipoles 219
3. Notes and comments 235

X

NULL-FIELD METHOD IN ELECTROMAGNETIC THEORY

1. Projection methods 242
2. Conventional null-field method 245
3. Notes and comments 297
