

CONTENTS

Preface *vii*

Introduction *xiii*

1. System Models	1.1 – 1.14
1.1 System, Components and Model	1.1
1.2 System Environment	1.3
1.3 Type of Activities	1.4
1.4 Continuous and Discrete System	1.5
1.5 System Modeling	1.7
1.6 Types of Model	1.8
2. System Simulation	2.1 – 2.24
2.1 Introduction	2.1
2.2 The Power of Simulation	2.2
2.3 Technique of Simulation	2.3
2.4 Why to Simulate	2.5
2.5 When to use Simulation	2.6
2.6 Advantage of Simulation	2.7
2.7 Basic Nature of Simulation	2.9
2.8 Comparison of Analytical and Simulation Method	2.10
2.9 Real Time Simulation	2.11
2.10 Hybrid Simulation	2.12
2.11 Monte Carlo Simulation	2.14
2.12 Distributed Lag Models	2.16
2.13 Cobweb Model	2.17
2.14 Simulation of Pure Pursuit Problem	2.19
2.15 Simulation Study	2.21
3. Simulation of Continuous Systems	3.1 – 3.12
3.1 Introduction	3.1
3.2 Mathematical Modeling Tool	3.2
3.3 Analog Versus Digital Simulation	3.3
3.4 Simulation of a Water Reservoir	3.5
3.5 Simulation of Servo System	3.8
3.6 Simulation of an Autopilot	3.9

4. Simulation of Discrete Systems	4.1 – 4.12
4.1 Discrete System	4.1
4.2 Simulation of Discrete System	4.2
4.3 Discrete Event Simulators	4.4
4.4 Component of Discrete Event Simulation	4.4
4.5 How Discrete Event Simulation Works	4.5
4.6 Overview of Discrete System	4.6
4.7 Fixed Time Step Versus Event to Event Model	4.9
4.8 Random Number Generator	4.10
5. Stochastic Processes — Simulation of Queuing Models	5.1 – 5.18
5.1 Introduction	5.1
5.2 Queuing Theory	5.3
5.3 Arrival Time Distribution	5.4
5.4 Transient State and Steady State	5.8
5.5 Assumption and Performance Measures for Queuing System	5.8
5.6 Classification of Queuing Models	5.10
5.7 Simulation of Single Server Queuing Model	5.11
5.8 Simulation of Multiple Server Queuing Model	5.14
5.9 Simulation of a Telephone System	5.16
6. Simulation of Inventory System	6.1 – 6.16
6.1 Introduction	6.1
6.2 Elements of Inventory System	6.2
6.3 Classification of Inventory	6.2
6.4 Cost Related to Inventory	6.4
6.5 Notations for Inventory System	6.5
6.6 Size of Demand and EOQ	6.5
6.7 Different Inventory Model	6.6
6.8 Simulation Model of Inventory System	6.11
7. Simulation of PERT and CPM Network	7.1 – 7.20
7.1 Introduction	7.1
7.2 History of PERT and CPM	7.2
7.3 Components of PERT-CPM Network	7.2
7.4 Network Construction using CPM and PERT	7.3
7.5 Steps of Network Construction	7.5
7.6 Drawing the CPM/PERT Network	7.7
7.7 Gantt Chart	7.11
7.8 Limitations of PERT and CPM	7.12
7.9 Comparison of CPM and PERT	7.12
7.10 Simulation of PERT and CPM Network	7.13

8. System Dynamics	8.1 – 8.14
8.1 Introduction	8.1
8.2 System Dynamics Diagram and Notations	8.2
8.3 Feedback Diagram	8.7
8.4 Stock and Flow Diagram	8.8
8.5 Exponential Growth Models	8.9
8.6 Exponential Decay Model	8.10
8.7 Logarithmic Model	8.11
8.8 A One-Sector Inventory Model	8.11
9. Simulation Language	9.1 – 9.14
9.1 Introduction	9.1
9.2 Features of Structured Simulation Languages	9.3
9.3 Continuous Simulation Languages	9.4
9.4 Different Type of Continuous Simulation Languages	9.5
9.5 Discrete Simulation Language	9.8
9.6 Different Type of Discrete Simulation Languages	9.9
10. Design and Verification of Simulation Experiments	10.1 – 10.16
10.1 Introduction	10.1
10.2 Validation and Verification of Simulation Model	10.2
10.3 Verification Techniques	10.3
10.4 Static Testing Versus Dynamic Testing	10.7
10.5 Validation Techniques	10.8
10.6 Model Based Testing	10.11
Index	I.1
