Science

A.K. Saxena

CONTENTS

Preface	vii
CHAPTER – 1 FIRST LAW OF THERMODYNAMICS	1-19
1.1 Thermodynamic System and Thermodynamic Coordinates	1
1.2 Concept of Temperature	2
1.3 Work Done by a Thermodynamic System in Expansion against External Pressure	2
1.3.1 Work Done at Constant Volume	4
1.3.2 Work Done at Constant Pressure	4
1.3.3 Work Done at Constant Temperature	4
1.3.4 Work Done in Thermal Isolation	5
1.4 The First Law of Thermodynamics	6
1.5 Heat Capacity	7
1.6 Specific Heat Capacity	8
1.7 Relationship between C_p and C_v	9
1.8 Internal Energy of an Ideal Gas	10
1.9 Heat Capacities of Ideal Gases	11
1.10 Applications of the First Law of Thermodynamics to an Ideal Gas	13
1.10.1 Adiabatic Process	13
1.10.2 Isothermal Processes	14
1.10.3 Constant Volume Processes (Isochoric Process)	14
1.10.4 Cyclic Processes	14
1.11 Path function and Point Function	15
Questions	19
CHAPTER – 2 ENTROPY AND THE SECOND LAW OF THERMODYNAMICS	20-44
2.1 Constraints and Accessible States	20
2.2 Reversible and Irreversible Processes	20
2.2.1 Quasistatic Process	20
2.2.2 Non-equilibrium Processes	21
2.3 The Concept of Entropy	21
2.3.1 Definition of Entropy	22

2.3.2	Entropy as a State Property	23
2.4	Cyclic Heat Engine	23
2.5	The Second Law of Thermodynamics	25
2.6	Carnot Cycle	26
2.7	Absolute Temperature Scale	27
2.8	Two Reversible Adiabatic Paths cannot intersect each other	28
2.9	Carnot's Theorem	28
2.10	The Clausius Inequality	29
2.11	Entropy Change in an Irreversible Process	31
2.12	Entropy Change of a Perfect Gas in a Reversible Process	32
2.13	Mixing of Two Fluids	35
2.14	A Perfect Engine	36
2.15	Carnot Refrigerator	37
2.16	Principle of Degradation of Energy	38
2.17	Theorem of Maximum Work	39
2.18	Nernst Heat Theorem and Third Law of Thermodynamics	39
2.19	Unattainability of Absolute Zero	42
2.20	Intensive and Extensive Parameters	42
	<i>Questions</i>	43

CHAPTER – 3 THERMODYNAMIC RELATIONS

45-72

3.1	General Relations for a Homogeneous Substance (Maxwell's Relation)	45
3.2	Derivation of Thermodynamic Variables in terms of Thermodynamic Potentials	48
3.3	Gibbs – Helmholtz Equations	49
3.4	TdS Equations	51
3.5	Specific Heat at Constant Volume and Constant Pressure in terms of Thermodynamic Potentials	52
3.6	Expressions for $C_p - C_v$	53
3.7	To Show that the Ratio of Adiabatic Bulk Modulus to Isothermal Bulk Modulus Equals C_p / C_v	55
3.8	Clausius – Clapeyron Equation	56
3.9	Joule Thomson's Porous Plug Experiment	58
3.10	Production of Low Temperatures by Adiabatic Demagnetization	61
	3.10.1 Principle	62
	3.10.2 Theory	63
	3.10.3 Experimental Method	65
3.11	Stefan's Law of Radiations from Thermodynamics	66
	<i>Questions</i>	71

CHAPTER – 4 THE STATISTICAL BASIS OF THERMODYNAMICS	73-112
4.1 Introduction	73
4.2 The Macroscopic and the Microscopic States	73
4.3 Probabilistic Basis of Statistical Mechanics	74
4.3.1 Statistical Ensembles	74
4.3.2 Phase Space and Ensemble	75
4.4 Division of Phase-Space into Phase-Cells	77
4.4.1 Specification of the State of a System	78
4.5 Linear Harmonic Oscillator as an Example of Phase Space	79
4.5.1 The Phase Space and Quantum States	80
4.6 Statistical Postulates	81
4.7 Number of States Accessible to a Macroscopic System	82
4.8 Statistical Ensembles	84
4.9 The Thermodynamic Probability	86
4.9.1. The Mathematical Probability	88
4.10 Contact Between Statistics and Thermodynamics, Physical Significance of $\Omega(N, V, E)$	88
4.11 The H-Theorem	91
4.12 Boltzmann's Theorem	92
4.13 Liouville's Theorem	94
4.14 Principle of Conservation of Density in Phase and Principle of Conservation of Extension in Phase	96
4.15 Stirling's Approximation	97
4.16 Random Walk Problem	99
4.17 Conditions for Equilibrium	101
4.18 Connection between Statistical and Thermodynamic Quantities	104
4.19 Chemical Potential	107
4.20 Phase Equilibrium and Gibbs Phase Rule	108
<i>Questions</i>	112

CHAPTER – 5 MICROCANONICAL ENSEMBLE	113-124
5.1 Introduction	113
5.2 Microcanonical Distribution	114
5.3 Entropy	116
5.4 Ideal Gases in Micro-canonical Ensemble	117
5.4.1 Boltzmann Gas (Distinguishable particles)	119
5.4.2 Bose Gas (Indistinguishable particles)	119
5.4.3 Fermi Gas (Indistinguishable particles)	119
5.4.4 Statistical Distribution Laws	120
5.4.5 Evaluation of Constants α and β	121

5.5	Entropy of a Perfect Gas in Microcanonical Ensemble	124
	<i>Questions</i>	124

CHAPTER – 6 CLASSICAL STATISTICS AND CANONICAL DISTRIBUTION 125-180

6.1	Distinguishability	125
6.2	Maxwell Boltzmann Distribution Formula	125
6.3	Partition Function	130
	6.3.1 Partition Function for a Gas Molecule	131
	6.3.2 For an Ideal Gas having N Molecules	132
6.4	Statistical Interpretation of Basic Thermodynamic Variables	133
6.5	Thermodynamic Quantities for Ideal Gas	134
6.6	Partition Function and Thermodynamic Quantities	135
6.7	Maxwell Boltzmann Law of Distribution of Velocities in an Ideal Gas	137
	6.7.1 Discussion of Velocity Distribution Function	140
	6.7.2 Maxwell-Boltzmann Law of Distribution of Speeds	143
6.8	Maxwell Boltzmann's Energy Distribution Law	146
6.9	Principle of Equipartition of Energy	150
6.10	System in Contact with a Heat Reservoir (Canonical Distribution)	152
6.11	Gibb's Paradox	154
6.12	Deviations from the Ideal State (Imperfect Gases)	156
6.13	van der Waals Equation of State (Real Gases)	157
6.14	The Law of Corresponding States	161
6.15	Langevin's Theory of Paramagnetism	162
6.16	Molecular Partition Functions	164
	6.16.1 Relating Z to z for an Ideal Gas	165
	6.16.2 Molecular Energy Levels	165
6.17	Translational Partition Function	166
6.18	Rotational Partition Function (Diatomic Molecule)	167
6.19	Vibrational Partition Function	171
6.20	The Rotational States of H_2	172
6.21	Contribution of Rotational Motion to the Specific Heat	172
6.22	Contribution of Vibrational Motion to the Specific Heat	174
6.23	Equivalence of Canonical and Microcanonical Ensembles	177
6.24	Virial Coefficients for a van der Waals Gas	177
	<i>Questions</i>	179

CHAPTER – 7 GRAND CANONICAL ENSEMBLE 181-195

7.1	Introduction	181
7.2	Grand Canonical Partition Function	181

7.3	Grand Canonical Distribution	183
7.4	The Grand Partition Function and Thermodynamic Quantities	183
7.5	Perfect Gas in Grand Canonical Ensemble, Grand Potential Ω	185
7.6	The Partition Function and Grand Partition Function for Ideal Gases	189
7.7	Landau Diamagnetism	191
	<i>Questions</i>	194

CHAPTER – 8 QUANTUM STATISTICAL MECHANICS 196-252

8.1	Introduction (Indistinguishability of Particles)	196
8.2	Postulates of Quantum Statistical Mechanics	197
8.3	Density Matrix	199
	8.3.1 Quantum Mechanical Analogue of Classical Liouville's Theorem 201	
8.4	Condition for Statistical Equilibrium	202
8.5	Density Operators for Various Ensembles in Quantum Statistical Mechanics	203
	8.5.1 Microcanonical Ensemble 203	
	8.5.2 Canonical Ensemble 203	
	8.5.3 Grand Canonical Ensemble 204	
8.6	Bose-Einstein Grand Partition Function and Distribution Law	204
8.7	Fermi Dirac Grand Partition Function and Distribution Law	205
8.8	The Boltzmann Limit of Boson and Fermion Gases	206
8.9	<i>Equation of State for an Ideal Gas</i>	207
8.10	Ideal Bose-Einstein Gas	208
8.11	Bose-Einstein Condensation	210
8.12	Black Body Radiation (Photon Gas)	215
8.13	Debye's Model of Heat Capacity of Solids	218
8.14	Liquid Helium	223
8.15	Some Peculiar Properties of He II	225
8.16	Tisza's Two Fluid Model for Liquid He II	227
8.17	Second Sound in He II	228
8.18	Landau's Theory of Liquid He II	231
8.19	Ideal Fermi Gas	235
8.20	Richardson-Dushman Equation for Thermionic Emission	244
8.21	Free Electron Theory of Metals	246
	8.21.1 Specific Heat Anomaly of Metals 248	
8.22	Pauli Paramagnetism	249
	<i>Questions</i>	251

CHAPTER – 9	PHASE TRANSITIONS	253-287
9.1	Introduction	253
9.2	Phase Transitions	253
9.3	Conditions for Phase Equilibrium	254
9.4	First Order Phase Transition: The Clausius Clapeyron Equation	256
9.5	Second Order Phase Transitions	260
9.6	The Critical Exponents	262
9.7	Ising Model of Phase Transitions	264
9.8	Ising Model in the Zeroth Approximation (Bragg-Williams Approximation)	267
9.9	One-Dimensional Ising Model	272
9.10	Ginzburg Landau Theory of Phase Transitions	274
9.11	Critical Exponents and Scaling Laws	277
9.12	The Landau Free Energy	278
	9.12.1 Mathematical Digression	279
9.13	Mean Field Theory	279
9.14	Breakdown of Mean Field Theory	282
9.15	The Scaling Hypothesis and Dimensional Analysis	284
9.16	Two Dimensional Ising Model	285
	<i>Questions</i>	287
CHAPTER – 10	FLUCTUATIONS	288-302
10.1	Introduction	288
10.2	Fluctuations in Energy	289
10.3	Fluctuations in Pressure	291
10.4	Fluctuations in Volume	292
10.5	Fluctuations in Concentration	293
10.6	Brownian Motion (Langevin's Theory)	295
10.7	Fluctuation Dissipation Theorem	296
10.8	Motion due to Fluctuating Force (The Fokker-Planck Equation)	298
10.9	Solution of Fokker-Planck Equation	300
	<i>Questions</i>	302
CHAPTER – 11	IRREVERSIBLE PROCESSES	303-307
11.1	Onsager Relations	303
11.2	Proof of Onsager Reciprocal Relations	305
	<i>Questions</i>	307
CHAPTER – 12	TRANSPORT PHENOMENA (DIFFUSION)	308-317
12.1	Introduction	308
12.2	What is Transport?	308

12.3	Diffusion (Fick's First Law)	309
12.4	The Time Evolution of a Concentration Gradient (Fick's Second Law)	311
12.5	Solution to Fick's Second Law	313
	<i>Questions</i>	317
Appendix A:	<i>Evaluation of the Integral</i> $\int_{-\infty}^{+\infty} e^{-x^2} dx$	318
Appendix B:	<i>Evaluation of the Integrals of the Form</i> $\int_0^{\infty} e^{-\alpha x^2} x^n dx$	320
Appendix C:	<i>Some Useful Integrals</i>	321
Appendix D:	<i>Stirling's Formula</i>	323
	<i>References</i>	324
	<i>Index</i>	325
