Preface

vii

1. Basic Elements	1.1
1.1 Finite Element Method	1.3
1.1.1 Finite Element Formulation	1.3
1.1.2 Finite Element Procedure	1.3
1.2 Common Elements	1.4
1.2.1 2D Beam Element	1.5
1.2.2 3D Beam Element	1.8
1.2.3 Plate and Shell Elements	1.10
1.2.4 Rotationally Symmetric Element	1.16
1.2.5 3D Isoparametric Brick Element	1.19
1.2.6 Twenty Noded Isoparametric Element	1.28
1.3 Pre and Post Processing	1.33
1.4 Closure	1.34
<i>References</i>	<i>1.34</i>
<i>Computer Programmes</i>	<i>1.35</i>
2. Static Problems	2.1
2.1 General Approach	2.1
2.2 Definitions	2.1
2.2.1 Lower and Upper Triangular Matrices	2.2
2.2.2 Symmetric Matrix	2.2
2.2.3 Skew Symmetric Matrix	2.2
2.2.4 Positive Definite Matrix	2.2
2.2.5 Complex Matrix	2.2
2.2.6 Transpose of a Square Matrix	2.3

2.2.7 Hermitian Matrix	2.3
2.2.8 Orthogonal Matrix	2.3
2.2.9 Trace of a Matrix	2.3
2.2.10 Banded Matrix	2.3
2.3 Solution by Matrix Inversion	2.4
2.3.1 Inversion by Partitioning	2.4
2.3.2 Inversion by Gauss Jordan Method	2.7
2.4 Gaussian Elimination Method	2.10
2.5 Cholesky Decomposition	2.13
2.6 Rectangular Array	2.17
2.7 Variable Bandwidth	2.18
2.8 Bandwidth Optimisation	2.20
2.9 Wave Front Technique	2.21
2.10 Transformation of Coordinates	2.24
2.10.1 2D Beam	2.25
2.10.2 3D Beam or Shell Element	2.26
2.11 Figures of Significance	2.26
2.12 Industrial Applications	2.27
2.12.1 Stress Analysis of a Two Stage Gear Box	2.27
2.12.2 Design of Heavy Duty Moulding Box	2.30
2.13 Closure	2.37
<i>References</i>	2.37
<i>Exercises</i>	2.38
<i>Computer Programmes</i>	2.40
3. Eigen Value Problems	3.1
3.1 Introduction	3.1
3.2 Industrial Scenario	3.2
3.3 Lumped and Consistent Mass Matrices	3.2
3.4 Sturm Sequence	3.4
3.5 Properties of Eigenvalues and Eigenvectors	3.4
3.5.1 Standard Eigenvalue Problem	3.8
3.5.2 Orthogonal Transformation	3.8
3.5.3 Eigen Values with a Shift	3.8
3.5.4 Eigen Values of a Real Symmetric Matrix	3.9
3.5.5 Eigen Vectors of a Real Symmetric Matrix	3.9
3.5.6 Eigen Values of a Hermitian Matrix	3.12

3.6	Non Standard Eigen Value Problem	3.14
3.7	Converting a Non Standard Eigenvalue Problem	3.15
3.8	Concept of Iteration	3.15
3.9	Simultaneous Iteration Scheme	3.19
3.10	Subspace Iteration	3.23
3.11	Lanczos Method	3.26
3.12	Interfacing with Design Methodologies	3.32
3.12.1	Gyroscopic Effect	3.32
3.12.2	Machine Foundation	3.35
3.12.3	Geometric Stiffness	3.39
3.13	Industrial Applications	3.41
3.13.1	I.C. Engine Rotor	3.42
3.13.2	1.5 MW Steam Turbine Rotor	3.43
3.13.3	250 MW Steam Turbine Rotor	3.46
3.13.4	Turbocharger Rotor	3.49
3.14	Merits and Demerits	3.50
3.15	Typical Natural Frequencies	3.51
3.16	Closure	3.52
	<i>References</i>	3.52
	<i>Exercises</i>	3.53
	<i>Computer Programmes</i>	3.57
4.	Cyclic Symmetric Structures	4.1
4.1	Introduction	4.1
4.2	Nature of Problems and Choice of Elements	4.2
4.2.1	Nature of Problems	4.2
4.2.2	Choice of Elements	4.2
4.3	Static or Steady State Stress Analysis	4.2
4.3.1	Asymmetric Loading	4.3
4.3.2	Skyline Solver	4.4
4.3.3	Wave Front Technique	4.4
4.3.4	Summary of Steps	4.6
4.4	Eigen Value Problem	4.7
4.4.1	Simple Case of Illustration	4.7
4.4.2	Mode Shape	4.9
4.5	Simultaneous Iteration Scheme	4.11
4.6	Industrial Applications	4.12
4.6.1	Natural Frequencies of an Impellers	4.12

4.6.2 Steady State Stress Analysis of Centrifugal Fan Impellers	4.14
4.6.3 Spur and Helical Gear Teeth Analysis	4.16
4.7 Closure	4.23
<i>References</i>	4.23
<i>Exercises</i>	4.24
<i>Computer Programmes</i>	4.25
5. Dynamic Analysis	5.1
5.1 Introduction	5.1
5.2 Direct Integration Methods	5.2
5.2.1 Ceneral Difference Method	5.2
5.2.2 Wilson θ Method	5.6
5.2.3 Newmark Method	5.9
5.3 Conditions for Stability	5.12
5.3.1 Central Difference Method	5.12
5.3.2 Wilson θ Method	5.13
5.3.3 Newmark Method	5.14
5.3.4 Discussion on Stability	5.14
5.4 Mode Superposition	5.15
5.4.1 Single Degree Freedom System Response	5.15
5.4.2 Multidegree Freedom System Response	5.18
5.4.3 Rayleigh Damping	5.19
5.5 Steady State Vibration Problems	5.23
5.6 Random Vibration	5.26
5.7 Figure of Significance	5.27
5.8 Industrial Application	5.27
5.8.1 Transient Analysis of a Cycle Frame	5.27
5.8.2 Earth Quake Analysis of Circuit Breakers	5.29
5.9 Closure	5.31
<i>References</i>	5.33
<i>Exercises</i>	5.34
<i>Computer Programmes</i>	5.34
6. Precautions Associated with Finite Element Method	6.1
6.1 Introduction	6.1
6.2 Consistent Dimensioning	6.1
6.3 Material Properties	6.2
6.4 Choice of Finite Elements	6.3

6.5	Interfacing Different Types of Elements	6.4
6.5.1	Use of Truss Elements	6.5
6.6	Bench Marks	6.6
6.6.1	Static Problems	6.6
6.6.2	Dynamic Problems	6.6
6.6.3	Lateral Vibration Problems	6.8
6.7	Constraints on Rotating Shafts	6.14
6.7.1	Radial Constraint-Plummer Blocks and Tapered Roller Bearings	6.14
6.7.2	Axial Constraint	6.15
6.7.3	Fits and Tolerances	6.16
6.7.4	Flange Coupling	6.17
6.8	Gyroscopic Effect	6.17
6.8.1	Illustration	6.18
6.9	Delinking of Lateral and Torsional Critical Speeds	6.19
6.9.1	General Observations on the Modeling a Rotating Shaft	6.19
6.9.2	Torsional Critical Speeds	6.19
6.9.3	Lateral Critical Speed	6.20
6.9.4	Natural Frequencies of the Housing	6.20
6.10	Interpretation of Computer Graphics	6.20
6.10.1	Iso Stress Plots	6.20
6.10.2	Natural Frequencies and Mode Shapes	6.20
6.11	Transient Vibration Problems	6.21
6.12	Physics of the Problem	6.21
6.12.1	Epicyclic Gear Casing Analysis	6.22
6.12.2	Gudgeon Pin of an I.C. Engine	6.22
6.12.3	Crank shaft analysis	6.23
6.13	Closure	6.23
	<i>References</i>	6.24
7.	Case Studies	7.1
7.1	Design of a Housing	7.1
7.1.1	Finite Element Analysis	7.2
7.2	Three Roll Plate Bending Machine	7.5
7.2.1	Machine Construction and Parts	7.6
7.2.2	Design Considerations	7.6
7.2.3	Design Calculations	7.8
7.2.4	Numerical Results	7.9

7.3 Guillotine Shear	7.9
7.3.3 FEM Model	7.14
7.3.4 Details of Numerical Work	7.14
7.3.5 Discussion of Results	7.14
7.3.6 Dynamic Analysis	7.16
7.4 Vehicle Dynamics	7.18
7.4.1 Vehicle Model	7.19
7.4.2 Road Model	7.19
7.4.3 Computational Procedure	7.20
7.4.4 Experimental Verification	7.22
7.5 Bladed Discs in Steam Turbines	7.22
7.5.1 Assessment of Accuracy	7.23
7.5.2 Details of Numerical Work	7.25
7.5.3 Results and Discussion	7.26
7.7 Closure	7.35
References	7.36
8. Summary	8.1
<i>Computer Programmes</i>	<i>CP.1</i>
<i>Index</i>	<i>I.1</i>
