<i>Preface</i>	<i>vii</i>
<i>List of Figures</i>	<i>xv</i>
<i>List of Tables</i>	<i>xvii</i>
1 Background	1
1.1 Mathematical Preliminaries	1
1.1.1 Signum function of a matrix	1
1.1.2 Norm of a matrix	1
1.1.3 β -ball lemma	2
1.2 Neural Networks (NNs) in Control Applications	2
1.2.1 Radial basis function (RBF) NNs	3
1.2.2 Multi-layer perceptron (MLP) NNs	4
1.3 Concepts of Stability	5
1.3.1 Lyapunov-based stability analysis	5
1.4 Lagrangian Method of Deriving Dynamics	7
1.5 Newton-Euler Formulation of Body Dynamics	8
2 Derivation of Dynamics of Practical Systems	10
2.1 Active Binocular Robot Heads	10
2.1.1 Introduction	10
2.1.2 Mechanical structure and design features	11
2.1.3 Lagrangian derivation of dynamics	14
2.1.4 Robot head kinematics	22
2.1.5 Computing the desired joint angle trajectories	24
2.1.6 Summary	27
2.2 Ground Vehicles	28
2.2.1 Introduction	28
2.2.2 Modeling a highway vehicle for lane keeping	29
2.2.3 Interpretation of the state variables	33
2.2.4 Dynamics in terms of sensory information	34
2.2.5 Sensor requirements and options	36

2.2.6	Modeling in terms of absolute position information	37
2.2.7	Summary	38
2.3	Surface Vessels	38
2.3.1	Main components of the surface vessel	39
2.3.2	Kinematics and equations of motion	41
2.3.3	Detailed dynamics analysis	43
2.3.4	Summary	52
3	Model-Based Controller Design	53
3.1	Design of CTC-like Controllers	53
3.2	Rigid Robot Manipulators and Active Vision Heads	54
3.3	Ground Vehicles: Autonomous Operation Using CTC-like Control	57
3.3.1	Control objective and the control scheme	59
3.3.2	Realizing the actual control inputs, $u = [F \ \delta]^T$	61
3.4	Surface Vessels: Path Tracking Control Using a CTC-like Controller	62
3.4.1	Numerical simulations	63
3.5	Design of NNs-based Dynamic Compensators	64
3.5.1	Rigid robot system with rotational joints	65
3.5.2	Computer numerical simulations	72
3.5.3	Ground vehicles	77
3.5.4	Computer numerical simulations	84
3.5.5	Surface vessels	91
3.5.6	Computer numerical simulations	93
4	Design of Combined Controller-Observer Schemes	95
4.1	Introduction	95
4.2	Design for Rigid Robot Systems	96
4.2.1	Dynamic control	96
4.2.2	Controller-observer scheme	96
4.2.3	Stability analysis and system error dynamics	98
4.2.4	Decomposing the NN into neural subnets	100
4.2.5	Computer numerical simulations	103
4.2.6	Summary	110
4.3	Ground Vehicles	111
4.3.1	Realizing $u = [F \ \delta]^T$	113
4.4	Control Scheme	114

4.4.1	Control objective	114
4.4.2	Combined controller-observer system	115
4.4.3	Stability analysis and the error dynamics	116
4.4.4	Tuning of the neural networks	118
4.4.5	Computer numerical simulations	120
4.4.6	Summary	124
5	Combined Longitudinal, Lateral, and Yaw Control	127
5.1	Introduction	127
5.2	Vehicle Dynamics in Terms of Relative Yaw	128
5.3	Control with Guaranteed Lateral and Yaw Stability	130
5.3.1	Calculating the actual control inputs	133
5.4	Computer Numerical Simulations	134
5.5	Summary	136
A	Robot Head Dynamics, Proofs: Existence of PD Matrices, (4.17), (4.62)	138
A.1	Derivation of Robot Head Rigid Body Dynamics	138
A.1.1	Calculation of pan motor torque	139
A.1.2	Calculation of tilt motor torque	140
A.1.3	Calculation of left camera motor torque	141
A.1.4	Calculation of right camera motor torque	142
A.1.5	Characterization of the robot system	142
A.2	Guaranteeing the Existence of PD Matrices	144
A.3	Proof of (4.17)	145
A.4	Proof of (4.62)	147
