

Life

fifth edition

Lewis • Gaffin • Hoefnagels • Parker

Detailed Contents

About the Authors iii
Preface xiii

UNIT 1

From Atoms to Cells

Chapter 1 What Is Life? 1

- 1.1 Characteristics of Life 2**
 - Organization 2
 - Energy Use and Metabolism 4
 - Maintenance of Internal Constancy 5
 - Reproduction, Growth, and Development 5
 - Irritability, Adaptation, and Natural Selection 5
- 1.2 Life Is Diverse 7**
 - Domains and Kingdoms Describe Life 7
 - Evolution Is the Backbone of Biology 8
- 1.3 Studying the Natural World 8**
 - Theories Explain Nature 9
 - Designing Experiments 13
 - Limitations of Scientific Inquiry 13

Chapter 2 The Chemistry of Life 17

- 2.1 What Is Matter? 18**
 - Elements 18
 - Atoms 18
 - Molecules 19
 - Chemical Bonds 20
- 2.2 Water's Importance to Life 24**
 - Solutions 24
 - Acids and Bases 25
 - Water and Temperature 26
- 2.3 Organic Molecules Are Important to Life 27**
 - Carbohydrates 27
 - Lipids 29
 - Proteins 31
 - Nucleic Acids 35

Chapter 3 Cells 39

- 3.1 Cells Are the Units of Life 40**
 - Discovering the Cellular Basis of Life 41
 - The Cell Theory Emerges 42
- 3.2 Variations on the Cellular Theme 43**
 - Bacterial Cells 46
 - Archaean Cells 47
 - Eukaryotic Cells 47

- 3.3 Organelles Divide Labor 48**
 - Organelles Interact to Secrete Substances 50
 - Lysosomes and Peroxisomes Are Cellular Digestion Centers—And More 53
 - Mitochondria Extract Energy from Nutrients 54
 - Chloroplasts Provide Plant Cells with Nutrients 55
- 3.4 Origins of Complex Cells 56**

Chapter 4 The Cell Surface and Cytoskeleton 59

- 4.1 The Cell Membrane Controls Cell Function 60**
 - The Structure of a Cell Membrane 61
 - How Substances Cross Membranes 63
- 4.2 The Cytoskeleton Supports Cells 69**
 - Microtubules Are Built of Tubulin 69
 - Microfilaments Are Built of Actin 70
 - Intermediate Filaments Provide Scaffolding 71
- 4.3 Cells Interact and Respond to Signals 73**
 - Animal Cell Junctions Are of Several Types 73
 - Cell Walls Are Dynamic Structures 74
 - Cellular Adhesion Directs Cell Movements 75
 - Signal Transduction Mediates Messages 76

Chapter 5 The Energy of Life 81

- 5.1 Defining Energy 82**
 - Where Does Energy Come From? 83
 - Energy Is Potential or Kinetic 83
- 5.2 Laws of Thermodynamics Describe Energy Transfer 85**
 - The First Law of Thermodynamics 85
 - The Second Law of Thermodynamics 86
- 5.3 Cells Metabolize Nutrients 87**
 - Building Up and Breaking Down—Anabolism and Catabolism 87
 - Energy in Chemical Reactions 88
 - Chemical Equilibrium 89
 - Oxidation and Reduction Reactions Link, Forming Electron Transport Chains 89
- 5.4 ATP Is Cellular Energy Currency 90**
 - ATP Has High-Energy Phosphate Bonds 90
 - Cells Couple ATP Formation and Breakdown to Other Reactions 91
 - Other Compounds Take Part in Energy Metabolism 91
- 5.5 Enzymes and Energy 93**
 - Enzymes Speed Biochemical Reactions 94
 - Cells Control Metabolic Pathways 94

Chapter 6 Photosynthesis 97

- 6.1 Life Depends on Photosynthesis 98**
 - Photosynthesis Converts Carbon Dioxide to Carbohydrate 98
 - How Might Photosynthesis Have Evolved? 99

- 6.2 Cellular Structures Capture Light Energy 101**
- What Is Light? 101
 - Pigment Molecules Capture Light Energy 101
 - Chloroplasts Are the Sites of Photosynthesis 103
- 6.3 The Light Reactions Begin Photosynthesis 105**
- Photosystem II Produces ATP 105
 - Photosystem I Produces NADPH 106
 - Two Photosystems Extract More Energy Than One 107
- 6.4 The Carbon Reactions “Fix” Carbon 109**
- The Calvin Cycle “Fixes” Carbon 109
 - Experiments Revealed the Steps of the Calvin Cycle 109
- 6.5 Photosynthetic Efficiency 111**
- Photorespiration Alters the Calvin Cycle 111
 - C₄ Photosynthesis Decreases Photorespiration 111
 - CAM Photosynthesis Stores Carbon Dioxide at Night 112

Chapter 7 How Cells Release Energy 117

- 7.1 Cellular Respiration Is Not the Same as Breathing 118**
- 7.2 Enzymes Transfer Energy from Glucose to ATP 119**
- An Overview of Glucose Utilization 119
 - Making and Using ATP 120
- 7.3 Glycolysis Breaks Down Glucose to Pyruvic Acid 123**
- The First Half of Glycolysis Activates Glucose 123
 - The Second Half of Glycolysis Extracts Some Energy 123
- 7.4 After Glycolysis—In the Presence of Oxygen 123**
- The Krebs Cycle Produces ATP and NADH 123
 - The Electron Transport Chain Drives ATP Formation 125
 - How Many ATPs Can One Glucose Molecule Yield? 127
 - Factors That Control Cellular Respiration 128
 - Proteins and Lipids Enter the Energy-Extracting Pathways 128
- 7.5 After Glycolysis—In the Absence of Oxygen 131**
- 7.6 Possible Origins of the Energy Pathways 133**

UNIT 2

Genetics and Biotechnology

Chapter 8 The Cell Cycle 137

- 8.1 The Balance Between Cell Division and Cell Death 138**
- 8.2 The Cell Cycle 139**
- Interphase—A Time of Great Activity 140
 - Mitosis Distributes Chromosomes 141
 - Cytokinesis Distributes Other Cell Contents 144
- 8.3 Cell Cycle Control 145**
- Checkpoints Keep the Cell Cycle on Track 145
 - Telomeres Provide a Cellular Clock 146
 - Signals to Divide 147
 - Control at the Tissue Level—Stem Cells and Cell Populations 149
- 8.4 Cell Death Is a Part of Life 150**
- Apoptosis Is Programmed Cell Death 150
 - Why Cells Die 151
- 8.5 Cancer—When the Cell Cycle Goes Awry 152**
- Cancer Cells Differ from Normal Cells 152
 - Causes of Cancer 153

Chapter 9 Meiosis 157

- 9.1 Why Reproduce? 159**
- 9.2 Variations on the Sexual Reproduction Theme 160**
- 9.3 Meiosis Halves the Chromosome Number 162**
- 9.4 The Sculpting of Gametes 167**
- Sperm Development 168
 - Ovum Development 170

Chapter 10 How Inherited Traits Are Transmitted 177

- 10.1 Tracing the Inheritance of One Gene 178**
- Experiments with Peas 178
 - How Biologists Describe Single Genes 180
 - Mendel’s First Law Reflects Meiosis 181
 - Pedigrees Show Modes of Inheritance 184
- 10.2 Tracing the Inheritance of Two Genes 186**
- 10.3 How Gene Expression Can Appear to Alter Mendelian Ratios 188**
- Allele Interactions 189
 - *Environmental Influences* 192
 - Genetic Heterogeneity—More Than One Way to Inherit a Trait 193
- 10.4 Polygenic and Multifactorial Traits 194**
- Measuring the Input of Genes and the Environment 194
 - Separating Genetic from Environmental Influences 196

Chapter 11 Chromosomes 201

- 11.1 Chromosome Structure 203**
- Distinguishing Chromosomes 203
 - Artificial Chromosomes 203
- 11.2 “Linking” Mendel’s Laws to Chromosomes 204**
- Experiments Reveal That Genes Are Linked on Chromosomes 204
 - *Linkage Maps* 206
- 11.3 How Chromosomes Determine Sex 206**
- A Diversity of Sex Determination Mechanisms 206
 - Sex Determination in Humans 207
- 11.4 Inheritance of Genes on Sex Chromosomes 208**
- X-Linked Recessive Inheritance 208
 - X Inactivation—Equalizing the Sexes 211
- 11.5 When Chromosomes Are Abnormal 213**
- Extra Chromosome Sets—Polyploidy 213
 - Extra and Missing Chromosomes—Aneuploidy 213
 - Smaller-Scale Chromosome Abnormalities 216

Chapter 12 DNA Structure and Replication 221

- 12.1 Experiments Identified the Genetic Material 222**
- DNA Transmits Traits 223
 - The Genetic Material—DNA, Not Protein 224
 - Deciphering the Structure of DNA 225
- 12.2 DNA Is a Double Helix 226**
- 12.3 DNA Replication Maintains Genetic Information 230**
- Demonstrating Semiconservative DNA Replication 230
 - Steps and Participants in DNA Replication 235
- 12.4 DNA Repair 237**

Chapter 13 Gene Function 243

- 13.1 Expressing Genes 244**
- Bacteria Use Operons to Turn Genes On or Off 245
 - Multicellular Organisms Use Transcription Factors to Turn Genes On or Off 245
 - Steps of Transcription 246
- 13.2 RNA Orchestrates Protein Synthesis 248**
- Types of RNA 248
 - RNA Is Processed 248
- 13.3 Building a Protein 250**
- The Genetic Code Connects Gene to Protein 250
 - Steps of Protein Synthesis 252
 - Protein Folding Revisited 253
- 13.4 Mutation—Genetic Misinformation 255**
- Discovering Mutation in Sickle Cell Disease 255
 - What Causes Mutation? 255
 - Types of Mutations 257
 - Natural Protection Against Mutation 260
- 13.5 The Human Genome Sequence Reveals Unexpected Complexity 260**
- Genome Economy: Reconciling Gene and Protein Number 261
 - What Does the Other 98.5 Percent of the Human Genome Do? 261

**UNIT 3****Evolution****Chapter 14 The Evolution of Evolutionary Thought 269**

- 14.1 Evolution—How Life Works 270**
- Explaining Life's Diversity 271
 - Clues in the Earth 273
- 14.2 Charles Darwin's Voyage 274**
- Darwin's Observations 274
 - After the Voyage 276
 - The *Origin of Species* and Response to It 276
 - Natural Selection—The Mechanism 277
- 14.3 Evolution Today—Epidemiology 279**
- Emerging Infectious Diseases 279
 - Evolving Ebola Virus Causes Infectious Illness 281
 - The Rise of Antibiotic Resistance 281

Chapter 15 The Forces of Evolutionary Change—Microevolution 285

- 15.1 Evolution is Highly Probable 287**
- Conditions for Evolution *Not* to Happen: Hardy–Weinberg Equilibrium 287
 - Conditions That Cause Evolutionary Change 287
- 15.2 Mate Choice and Evolution 289**
- Nonrandom Mating 289
 - Migration 289
 - Genetic Drift 291
- 15.3 Mutation Fuels Evolution 292**

15.4 Natural Selection Molds Evolution 292

- Types of Natural Selection 292
- Balanced Polymorphism 293

Chapter 16 Speciation and Extinction 299

- 16.1 The Species Concept 300**
- The Evolving Species Concept 301
 - Tree Diagrams Describe the Comings and Goings of Species 302
 - Morphology Versus Molecules—What Is a Platypus? 303
- 16.2 Reproductive Differences Distinguish Species 304**
- Early Obstacles 304
 - Later Obstacles 304
- 16.3 Speciation and Space 306**
- Allopatric Speciation Reflects a Geographic Barrier 306
 - Parapatric Speciation Occurs in Neighboring Regions 306
 - Sympatric Speciation Occurs in a Shared Habitat 307
 - Chromosome Number Contributes to Speciation 308
 - Difficulties in Examining Speciation and Space 309
- 16.4 Speciation and Time 310**
- Evolution May Be Gradual or Proceed by “Leaps and Starts” 310
 - Bursts of Speciation—Adaptive Radiation 312
- 16.5 Extinctions 313**
- Extinctions on a Small Scale 313
 - What Causes Mass Extinctions? 314

Chapter 17 Evidence of Evolution 321

- 17.1 Reconstructing the Stories of Life 322**
- Clues in the Earth and in Molecules 322
 - Systematics Assembles the Stories of Life 323
- 17.2 Fossils Record Evolution 327**
- The Role of Geology in Interpreting Fossil Evidence 327
 - How Fossils Form 328
 - Estimating the Age of a Fossil 331
- 17.3 Comparing Structures 333**
- Comparing Anatomical Parts Can Reveal Evolutionary Relationships 334
 - Vestigial Structures Reflect the Past 334
 - Embryos Provide Evolutionary Clues 336
- 17.4 Molecules Reveal Relatedness 337**
- Comparing Chromosomes 338
 - Comparing Protein Sequences 339
 - Comparing DNA Sequences 339
 - Molecular Clocks 340
 - Reconciling Fossil, Biogeographical, and Molecular Evidence 341

Chapter 18 The Origin and History of Life 345

- 18.1 Life's Origins 347**
- Setting the Scene 347
 - Prebiotic Simulation Experiments Show How Life Might Have Arisen 348
 - An RNA World May Have Preceded Cellular Life 350
 - The Origin of Metabolism 352
- 18.2 Highlights in the History of Life 352**
- Cells Emerged and Evolved in the Archean and Proterozoic Eras 354
 - The Strange Ediacarans Preceded the Cambrian Explosion 356
 - Life “Exploded” in the Paleozoic Era 357
 - Reptiles and Flowering Plants Thrived During the Mesozoic Era 361

- 18.3 **The Age of Mammals** 362
- Mammals Radiated During the Cenozoic Era 362
 - The Hominoids and Hominids 363

UNIT 4

The Diversity of Life

Chapter 19 Viruses 369

- 19.1 **Viruses—Discovery and Structure** 370
- The Discovery of Viruses 370
 - Studying Viruses 371
 - Viral Structure 371
- 19.2 **Viruses Infect Cells to Reproduce** 373
- Viruses Bind Target Cells and Introduce Their Genetic Material 373
 - Two Viral Lifestyles: Lysis and Lysogeny 375
- 19.3 **Viruses Can Kill Cells** 377
- Viruses Infect Specific Cells of Certain Species 378
 - Defenses Against Viral Infections 380
- 19.4 **Other Infectious Agents** 380
- A Viroid Is an Infectious RNA Molecule 380
 - A Prion Is One Protein That Takes Variant Forms 381

Chapter 20 Bacteria and Archaea 387

- 20.1 **Prokaryotes Are a Biological Success Story** 388
- 20.2 **Parts of a Prokaryotic Cell** 389
- Internal Structures 390
 - External Structures 390
- 20.3 **How Microbiologists Distinguish and Describe Prokaryotes** 392
- Traditional Methods of Classifying Prokaryotes 392
 - Molecular Data Reveal Evolutionary Relationships 394
 - Bacteria and Archaea Revisited 394
- 20.4 **Prokaryotes Transfer Genes Vertically and Horizontally** 396
- Binary Fission Provides Vertical Gene Transfer 396
 - Horizontal Gene Transfer Occurs by Three Routes 396
- 20.5 **How Prokaryotes Affect Humans** 398
- Bacterial Infections in Humans 399
 - Bacteria as Bioweapons 400
 - Industrial Microbiology Borrows Prokaryotes' Products and Processes 400

Chapter 21 Protista 405

- 21.1 **Kingdom Protista Lies at the Crossroads Between the Simpler and the Complex** 406
- 21.2 **Basal Eukaryotes Represent the Most Ancient Protista** 407
- Basal Eukaryotes That Lack Mitochondria 408
 - Basal Eukaryotes with Mitochondria 409
- 21.3 **The Alveolates Include Dinoflagellates, Apicomplexa, and Ciliates** 412
- Dinoflagellates 412
 - Apicomplexa 413
 - Ciliates 415

- 21.4 **The Stramenopiles Include Water Molds, Diatoms, and Some Algae** 418
- Water Molds 418
 - Diatoms 418
 - Brown and Golden Algae 419
- 21.5 **The Red Algae Contain Unique Photosynthetic Pigments** 419
- 21.6 **The Green Algae** 420

Chapter 22 Plantae 425

- 22.1 **Introducing the Plants** 426
- Distinguishing Features of Plants 427
 - Origin and Evolution of Land Plants 428
- 22.2 **Bryophytes Are the Simplest Plants** 429
- Bryophyte Characteristics and Life Cycle 430
 - Bryophyte Diversity 431
- 22.3 **Seedless Vascular Plants** 432
- Seedless Vascular Plant Characteristics and Life Cycle 432
 - Seedless Vascular Plant Diversity 434
- 22.4 **Seed-Producing Vascular Plants** 435
- Gymnosperms Are “Naked Seed” Plants 436
 - Angiosperms Are Flowering Plants 439

Chapter 23 Fungi 445

- 23.1 **Introducing the Fungi** 446
- Distinguishing Features of Fungi 446
 - Parts of a Fungus 448
 - The Place of Fungi in Life History 449
- 23.2 **Chytridiomycetes Are Flagellated Fungi** 450
- 23.3 **Zygomycetes Are Prolific, Nonseptate Fungi** 450
- 23.4 **Ascomycetes Are Sac Fungi** 452
- 23.5 **Basidiomycetes Are Club Fungi** 453
- 23.6 **Fungi Interact with Other Organisms** 455
- Mycorrhizal Fungi Live on or in Roots 455
 - Lichens Are Distinctive Dual Organisms 456
 - Ants, Bacteria, and Fungi 458

Chapter 24 Animalia I—Sponges Through Echinoderms 461

- 24.1 **Introducing the Animals** 462
- 24.2 **Distinguishing Features of Animals** 463
- Animals Obtain Nutrients from Others 463
 - Body Complexity and Form 463
 - Animal Reproduction and Development 464
- 24.3 **The Sponges (Porifera) Are the Simplest Animals** 467
- 24.4 **Cnidarians Are Radially Symmetrical, Aquatic Invertebrates** 469
- Characteristics of Cnidarians 469
 - A Closer Look at Corals 471
- 24.5 **Flatworms (Platyhelminthes)** 471
- 24.6 **Mollusks Include Clams, Snails, Octopuses, and Squids** 473
- 24.7 **Annelids Are Segmented Worms** 475
- 24.8 **Roundworms (Nematoda)** 477

- 24.9 Arthropods Include Insects, Crustaceans, and Arachnids 478**
- Arthropod Characteristics and Organ Systems 478
 - Arthropod Diversity 479
- 24.10 The Echinoderms: Life Based on Five-Part Symmetry 481**
- Echinoderm Characteristics 481
 - Echinoderm Evolution and Development 483
- Chapter 25 Animalia II—The Chordates 489**
- 25.1 Introducing the Chordates 490**
- 25.2 Tunicates and Lancelets Are “Protochordates” 491**
- Tunicates 491
 - Lancelets 492
- 25.3 Vertebrates 495**
- 25.4 Fishes—Vertebrate Life in the Waters 495**
- Jawless Fishes 495
 - Jawed Fishes 496
- 25.5 Amphibians Lead a Dual Lifestyle 499**
- Amphibian Characteristics 500
 - Amphibian Diversity 500
- 25.6 The Reptiles Fully Conquer Land 501**
- 25.7 Birds—Vertebrate Life in the Sky 504**
- 25.8 Mammals Are Furry Milk-Drinkers—And More 507**

UNIT 5

Plant Life

Chapter 26 Plant Form and Function 513

- 26.1 Plant Tissue and Cell Types 514**
- Meristems 515
 - Ground Tissue 516
 - Dermal Tissue 517
 - Vascular Tissue 518
- 26.2 Anatomy of a Plant 520**
- Stems 521
 - Leaves 522
 - Roots 526
- 26.3 Secondary Plant Growth 529**
- Vascular Cambium 529
 - Cork Cambium 532

Chapter 27 Plant Nutrition and Transport 535

- 27.1 Evolution of Complex Transport Systems 536**
- 27.2 Plant Nutrition 536**
- Essential Nutrients for Plants 537
 - Nutrients Come from the Atmosphere and Soil 539
 - Roots Tap Water and Dissolved Minerals 540
 - How Plants Obtain Nitrogen 541
- 27.3 Water and Dissolved Minerals Are Pulled Up to Leaves 541**
- Water Vapor Is Lost Through Transpiration 542
 - Water Moves Through Xylem 542
 - Water Enters Plants in Roots 544

- 27.4 Photosynthate Is Pushed to Heterotrophic Cells 545**
- Phloem Sap Composition 545
 - The Pressure Flow Theory Explains Photosynthate Distribution 545

Chapter 28 Reproduction of Flowering Plants 549

- 28.1 Asexual Reproduction 550**
- 28.2 Sexual Reproduction 551**
- Flowers Are Reproductive Organs 554
 - Gamete Formation 554
 - Pollination Brings Pollen to the Stigma 555
 - Double Fertilization Yields Zygote and Endosperm 560
- 28.3 Seeds and Fruits 561**
- Seed Development and Dormancy 561
 - Fruit Formation 562
 - Seed Dispersal and Germination 562

Chapter 29 Plant Responses to Stimuli 569

- 29.1 How Hormones Influence Plant Growth 570**
- Auxins 571
 - Gibberellins 572
 - Cytokinins 573
 - Ethylene 574
 - Abscisic Acid 574
- 29.2 How Plants Move 574**
- Phototropism—Response to Unidirectional Light 575
 - Gravitropism—Response to Gravity 575
 - Thigmotropism—Response to Touch 576
 - Nastic Movements 576
- 29.3 How Plants Respond to Seasonal Changes 579**
- Flowering Is a Response to Photoperiod 579
 - Do Plants Measure Day or Night? 580
 - Phytochrome Is a Pigment That Controls Photoperiodism 581
 - Photoperiod and Phytochrome Influence Other Responses 582
 - Senescence and Dormancy 583
- 29.4 Plant Circadian Rhythms 583**
- Control of Circadian Rhythms 584
 - Solar Tracking Is a Circadian Rhythm 584

UNIT 6

Animal Life

Chapter 30 Animal Tissues and Organ Systems 589

- 30.1 Animal Tissue Types 590**
- Cells Specialize and Associate to Form Tissues 590
 - Epithelial Tissue Forms Layers 591
 - Connective Tissues Include Blood, Bone, and Cartilage 593
 - Nervous Tissue Connects and Integrates the Body 593
 - Muscle Tissue Provides Movement 595
- 30.2 Tissues and Organs Build Animal Bodies 595**
- Tissues and Organs Increased in Complexity with Evolution 595
 - The Organ Systems of a Human 595

30.3 Organ System Interaction Promotes Homeostasis 597**30.4 A Sample Organ System—The Integument 598**

- A Closer Look at Human Skin 598
- Specializations of the Integument 601

Chapter 31 The Nervous System 607**31.1 The Nervous System Maintains Homeostasis 608****31.2 Neurons Are Functional Units of a Nervous System 609**

- Anatomy of a Neuron 609
- A Neuron at Rest Has a Negative Charge 610
- A Neuron Transmitting an Impulse Undergoes a Wave of Depolarization 612
- A Fatty Sheath Speeds Impulse Conduction 612

31.3 Neurotransmitters Pass the Message from Cell to Cell 614

- Types of Neurotransmitters and Neuromodulators 615
- Neurotransmitter Action at the Synapse 615
- Disposal of Neurotransmitters 617
- A Neuron Integrates Incoming Messages 618

31.4 Evolutionary Trends in Nervous Systems 619

- Invertebrates Have Nerve Nets, Ladders, or Simple Brains 619
- Vertebrates Have Central and Peripheral Nervous Systems 620

31.5 The Human Central Nervous System 621

- The Spinal Cord 621
- Major Brain Regions 622
- The Cerebrum Houses the “Mind” 625
- Memory 627

31.6 The Human Peripheral Nervous System 629

- The Somatic Nervous System 629
- The Autonomic Nervous System 629

31.7 Protection of the Nervous System 629**Chapter 32 The Senses 635****32.1 Sensory Systems Are Adaptive 636****32.2 Diverse Sensory Systems Operate by the Same General Principles 638**

- Sensory Receptors Detect, Transduce, and Amplify Stimuli 638
- Sensory Adaptation 638
- Types of Sensory Receptors 638

32.3 Chemoreception 640

- Chemoreception in Invertebrates 640
- Chemoreception in Vertebrates 640

32.4 Photoreception 642

- Photoreception in Invertebrates 643
- Photoreception in Vertebrates 643

32.5 Mechanoreception 647

- Mechanoreception in Invertebrates 647
- Mechanoreception in Vertebrates 648

Chapter 33 The Endocrine System 655**33.1 Hormones Are Chemical Messengers and Regulators 656**

- Roles of Endocrine Systems 656
- Components of Endocrine Systems 657

33.2 How Hormones Exert Their Effects 657

- Peptide Hormones Bind to Cell Surface Receptors 657
- Steroid Hormones Bind to Receptors Inside Cells 658
- Feedback Loops Control Hormone Levels 659

33.3 Diversity of Endocrine Systems 660

- Hormones in Invertebrates 660
- Hormones and Glands in Vertebrates 661

33.4 A Closer Look at the Endocrine System in Humans 663

- The Pituitary Is Two Glands in One 663
- Glands That Regulate Metabolism 666
- Endocrine Control of Reproduction 670

33.5 Prostaglandins Provide Localized Control 671**Chapter 34 The Musculoskeletal System 673****34.1 A Musculoskeletal System Helps an Animal Respond to Its Environment 674****34.2 Types of Skeletons 675**

- Hydrostatic Skeletons Consist of Constrained Fluid 675
- Exoskeletons Protect from the Outside 675
- Endoskeletons Support, Protect, and Provide Movement 676

34.3 Muscle Diversity 682**34.4 Vertebrate Muscles 683**

- Muscle Cell Types 683
- Skeletal Muscle Consists of Fiber Bundles 685
- Sliding Filaments Generate Movement 688
- Whole Muscle Responses to Stimuli 690

34.5 Skeletal Muscle and Bone Function Together 690

- Joints—Where Bone Meets Bone 690
- Exercise Strengthens Muscles and Bones 692

Chapter 35 The Circulatory System 695**35.1 Circulatory Systems Deliver Nutrients and Remove Wastes 696**

- Circulatory Systems Are Open or Closed 696
- Respiratory Pigments Carry Additional Oxygen 697
- Vertebrate Circulatory Systems Are Closed, with Specialized Blood Cells 697

35.2 The Human Circulatory System 698

- The Human Heart Is a Powerful Pump 699
- Blood Vessels 701
- Blood Pressure 704
- Blood Is a Complex Mixture 706
- The Effects of Exercise 710

35.3 The Lymphatic System Maintains Circulation and Protects Against Infection 711**Chapter 36 The Respiratory System 715****36.1 Respiration Exchanges Gases 716**

- What Is Respiration? 716
- Body Surface 717
- Tracheal Systems 717
- Gills 718
- Lungs 718

36.2 Components of the Respiratory System in Humans 721

- Respiratory System Structures Transport Air 721
- Alveoli Are the Sites of Gas Exchange 725

36.3 Functions of the Respiratory System in Humans 726

- How We Breathe 726
- Delivering Oxygen and Removing Carbon Dioxide 726
- Carbon Monoxide Poisoning 727

36.4 Control of Respiration 728

- Blood CO₂ Levels Regulate Breathing Rate 728
- Breathing at High Altitudes 728

Chapter 37 Digestion and Nutrition 731**37.1 The Art and Evolution of Eating 732****37.2 Digestive Diversity 734**

- Types of Digestion 734
- Digestive System Adaptations 735

37.3 The Digestive System in Humans 736

- The Mouth and the Esophagus—Digestion Begins 737
- The Stomach Stores, Digests, and Pushes Food 740
- The Small Intestine Absorbs Nutrients 741
- The Large Intestine Completes Nutrient Absorption 744
- The Pancreas, Liver, and Gallbladder Aid Digestion 744

37.4 Human Nutrition 745

- Types of Nutrients 745
- Nutrient Deficiencies 748

Chapter 38 Regulation of Temperature and Body Fluids 751**38.1 How Animals Regulate Their Temperature 752**

- Body Heat Is External or Internal, Body Temperature Constant or Variable 752
- Adaptations to Cold 753
- Adaptations to Heat 754

38.2 How Animals Regulate Water and Ion Balance 756**38.3 How Animals Rid Themselves of Nitrogenous Wastes 757****38.4 The Human Urinary System 759**

- The Kidneys 759
- Nephrons 759

38.5 Control of Kidney Function 763**Chapter 39 The Immune System 767****39.1 The Evolution of Immunity 768**

- Invertebrate Immunity Is Innate Only 769
- Vertebrate Immunity Is Innate and Adaptive 770

39.2 Innate Defenses Are Nonspecific and Act Early 771**39.3 Adaptive Defenses Are Specific and Act Later 773**

- Antigen-Presenting Cells Begin the Immune Response 773
- B Cells Produce Antibodies 774
- T Cells Stimulate, Secrete, Attack, and Coordinate 777

39.4 The Human Immune System Throughout Life 781**39.5 The Unhealthy Immune System 783**

- Immunity Breakdown 783
- Autoimmunity—Attacking Self 783
- Allergies Misdirect the Immune Response 785

Chapter 40 Human Reproduction and Development 789**40.1 From Embryology to Developmental Biology: A Descriptive Science Becomes Experimental 790**

- Does a Fertilized Ovum Contain a Tiny Organism? 791
- Early Experiments with Embryos 792
- Selective Gene Activation Sculpts Specialized Cell Types 793

40.2 The Human Reproductive System 795

- The Human Male Reproductive System 795
- The Human Female Reproductive System 798

40.3 The Structures and Stages of Human Prenatal Development 800

- Fertilization Joins Genetic Packages 800
- Cleavage—Cells Rapidly Divide 801
- Implantation Establishes Pregnancy 802
- Gastrulation—Tissues Begin to Form 803
- Organogenesis—The Human Body Takes Shape 803
- Structures That Support the Embryo 805
- The Fetal Period—Structures Are Elaborated 806
- Labor and Birth 807

40.4 Growth and Development After Birth 810

- The Early Years 810
- Aging Is Passive and Active 811
- The Human Life Span 812

**UNIT 7****Behavior and Ecology****Chapter 41 Animal Behavior 815****41.1 Genes and Experience Shape Behavior 816**

- Innate Behavior Is Inborn 817
- Learned Behavior Results from Experience 819

41.2 Types of Behavior 821

- Orientation and Navigation 821
- Aggression 823
- Mating Behavior 825
- Altruism 826

41.3 Animals Living Together 828

- Group Living Has Advantages and Disadvantages 828
- Environmental Conditions Influence Behavior 829
- Communication Keeps the Group Together 830

41.4 Three Animal Societies 832

- Snapping Shrimp 832
- Naked Mole Rats 833
- Honeybees 833

Chapter 42 Populations 837**42.1 A Population Is All Individuals of a Single Species in a Particular Place 838**

- Ecology Is the Study of Organisms and Their Environment 838
- Characteristics of Populations 839

42.2 How Populations Grow 841

- Reproductive Characteristics Influence Population Growth 841
- Growth Is Exponential When Resources Are Unlimited 843

42.3 Factors That Limit Population Size 844

- Population Growth Eventually Slows 845
- Crowding, Competition, Predation, and Pathogens Limit Population Size 845
- Environmental Disasters Kill Irrespective of Population Size 846
- “Boom and Bust” Cycles 847
- Influences of Natural Selection on Population Growth 847

42.4 Human Population Growth 849

Chapter 43 Communities and Ecosystems 853

- 43.1 A Community Includes All Life in an Area 855**
- Interspecific Competition Prevents Species from Occupying the Same Niche 855
 - Other Community Interactions Include Symbiosis and Predation 856
- 43.2 Communities Change Over Time 859**
- Primary Succession—A New Community Arises 859
 - Secondary Succession—Replacing a Disturbed Community 859
 - Succession Can Be Complex 860
- 43.3 An Ecosystem Is a Community and Its Physical Environment 861**
- Characteristics of Ecosystems 861
 - Energy Flows Through an Ecosystem 862
 - Ecological Pyramids Describe Ecosystem Characteristics 865
- 43.4 How Chemicals Cycle Within Ecosystems—Biogeochemical Cycles 866**
- The Water Cycle 867
 - The Carbon Cycle 867
 - The Nitrogen Cycle 867
 - The Phosphorus Cycle 868
 - Some Chemicals Become Concentrated as They Ascend Food Webs 869
- 43.5 A Sampling of Ecosystems 873**
- The Sea Surface Microlayer 873
 - Vernal Pools 874
 - Niagara Escarpment 874
 - Fjords—Where Fresh Water Meets Seawater 874

Chapter 44 Biomes and Aquatic Ecosystems 877

- 44.1 Biomes 878**
- Climate Influences Biomes 879
 - Tropical Rain Forest 881
 - Tropical Dry Forest 882
 - Tropical Savanna 883
 - Desert 884
 - Temperate Grasslands 885
 - Temperate Forests 886
 - Taiga 887
 - Tundra 888
- 44.2 Freshwater Ecosystems 889**
- Lakes and Ponds 889
 - Rivers and Streams 890
- 44.3 Marine Ecosystems 891**
- Coasts 891
 - Oceans 893

Chapter 45 Environmental Challenges 897

- 45.1 Sustainability 899**
- 45.2 The Air 900**
- Air Pollution 900
 - Acid Deposition 901
 - Thinning of the Ozone Layer 902
 - Global Warming 903
- 45.3 The Land 905**
- Deforestation 905
 - Desertification 906
- 45.4 The Waters 906**
- Chemical Pollution 906
 - Physical Alteration of Waterways 908
 - Endangered Estuaries 909
 - Coral Reefs 909
 - Polluted Oceans 910
- 45.5 Loss of Biodiversity 911**
- Biodiversity and Ecosystem Stability 911
 - Invasion Biology and Introduced Species 911
 - The Resiliency of Life 912

Appendix A

Units of Measurement 915

Appendix B

Periodic Table of Elements 917

Appendix C

Amino Acid Structures 918

Appendix D

Taxonomy 919

Appendix E

Answers to Genetics Problems 921

Glossary 922**Credits 946****Index 951**
